Structure and Syllabus

FOR

**M.E. Mechanical Engineering
(COMPUTER AIDED DESIGN, MANUFACTURE &
ENGINEERING)**

2017-Course

UNDER FACULTY OF ENGINEERING

EFFECTIVE FROM July, 2017

University of Pune

M.E. Mechanical Engineering (Computer Aided Design, Manufacture & Engineering)

SEMESTER I

CODE	SUBJECT	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
		Lect. / Pr	Paper		TW	Oral/ Presentation	Total	
			In Sem. Assessment	End Sem. Assessment				
507201	Advanced Mathematics	4	50	50	-	-	100	4
502402	Advanced Machine Design	4	50	50	-	-	100	4
502403	Computer Aided Design	4	50	50	-	-	100	4
502104	Research Methodology	4	50	50	-	-	100	4
502405	Elective I**	5	50	50	-	-	100	5
502406	Modelling and Analysis Lab	4			50	50	100	4
Total		25	250	250	50	50	600	25

SEMESTER II

CODE	SUBJECT	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
		Lect./ Pr	Paper		TW	Oral/ Presentation	Total	
			In Sem. Assessment	End Sem. Assessment				
502407	Computer Integrated Manufacturing	4	50	50	-	-	100	4
502408	Industrial Product Design & Product Life Cycle Management	4	50	50	-	-	100	4
502409	Automated Manufacturing System Modelling	4	50	50	-	-	100	4
502410	Elective II	5	50	50	-	-	100	5
502411	Simulation Lab	4	-	-	50	50	100	4
502412	Seminar I	4	-	-	50	50	100	4
Total		25	200	200	100	100	600	25

Elective I:** Common to All M.E. Mechanical Specializations.

University of Pune

SEMESTER III

CODE	SUBJECT	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
		Lect. / Pr	Paper		TW	Oral/ Presentation	Total	
			In Sem. Assessment	End Sem. Assessment				
602413	Simulation Modelling	4	50	50	-	-	100	4
602414	Optimization Techniques	4	50	50	-	-	100	4
602415	Elective III	5	50	50	-	-	100	5
602416	Seminar II	4	-	-	50	50	100	4
602417	Project Stage I	8	-	-	50	50	100	8
Total		25	150	150	100	100	500	25

SEMESTER IV

CODE	SUBJECT	TEACHING SCHEME	EXAMINATION SCHEME				CREDITS
		Lect. / Pr	Paper	TW	Oral/ Presentation	Total	
602418	Seminar III	5	-	50	50	100	5
602419	Project Work Stage II	20	-	150	50	200	20
Total		25	-	200	100	300	25

Lab Practice I & II:

The laboratory work will be based on completion of assignments confined to the courses of that semester.

SEMINAR:

The student shall deliver the seminar on a topic approved by authorities.

Seminar I: shall be on state of the art topic of student's own choice approved by authority.

The student shall submit the seminar report in standard format, duly certified for satisfactory completion of the work by the concerned Guide and head of the department/institute.

Seminar II: shall be on the topic relevant to latest trends in the field of concerned branch, preferably on the topic of specialization based on the electives selected by him/her approved by authority. The student shall submit the seminar report in standard format, duly certified for satisfactory completion of the work by the concerned Guide and head of the department/institute.

Seminar III: shall be extension of **seminar II**. The student shall submit the seminar report in standard format, duly certified for satisfactory completion of the work by the concerned Guide and head of the department/institute.

PROJECT WORK:

The project work shall be based on the knowledge acquired by the student during the coursework and preferably it should meet and contribute towards the needs of the society. The project aims to provide an opportunity of designing and building complete system or subsystems based on area where the student likes to acquire specialized skills.

Project Work Stage – I

Project work Stage – I is the integral part of the project Work. In this, the student shall complete the partial work of the Project that will consist of problem statement, literature review, project overview, scheme of implementation (UML/ERD/block diagram/ PERT chart, etc.) and Layout & Design of the Set-up. The candidate shall deliver a presentation as a part of the progress report of Project work Stage-I, on the advancement in Technology pertaining to the selected dissertation topic.

The student shall submit the progress report of Project work Stage-I in standard format duly certified for satisfactory completion of the work by the concerned guide and head of the department/Institute.

Project Work Stage - II

In Project Work Stage – II, the student shall complete the balance part of the Project that will consist of fabrication of set up required for the project, conducting experiments and taking results, analysis & validation of results and conclusions.

The student shall prepare the final report of Project work in standard format duly certified for satisfactory completion of the work by the concerned guide and head of the department/Institute.

Note: Institute must submit the list of candidates, guide and project details (title, area, problem definition, and abstract - clearly indicating objectives and scope, sponsorship details, if any) to the university within month of commencement of third semester. The guide must be approved/qualified teacher of the institute. A guide can guide at the most 8 students per year.

University of Pune

Semester – I Advanced Mathematics [507201]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect/Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
507201	4	50	50	-	-	100	4

1. Inner Product Spaces, Orthogonality

Inner products, Cauchy-Schwartz inequality, Orthogonal projections, Gram-Schmidt orthogonalization, Matrix representation of inner product, Least square solutions

2. Complex Analysis

Complex variables, Complex differentiation, Harmonic functions, conformal mapping, Complex Integration, Cauchy's integral formulae and Calculus of residues

3. Transforms

Concept of transforms, Fourier transforms, Applications to partial differential equations, Discrete Fourier transform, Laplace transforms and its inverse, Laplace transform of special functions: Unit step, Unit impulse, Periodic and Error. Applications to initial value problem and wave equation using transform techniques.

4. Differential Equation

Series Solution of differential equations, Bessel's and Legendre's differential equations, Mass spring systems of multi degree freedom, Matrix formulation for differential equations in vibration theory, Normal mode solution, Numerical computation of Eigen value.

5. Numerical Analysis

Finite difference analysis, Explicit and Implicit finite difference scheme, Stability of finite difference method, Applications of finite difference analysis in boundary value problems, one dimensional diffusion equation, Wave equation, Laplace equation.

6. Calculus of Variation

Introduction, Functional, Euler's equation, Isoperimetric Problem, Functional involving higher order derivative, Approximate solution of boundary value problem, Rayleigh –Ritz method, Galerkin's method, Lagrange's principal.

Reference Books

1. Advanced Engineering Mathematics, Erwin Kreyszig, Wiley India
2. Higher Engineering Mathematics, B. S. Grewal, Khanna Publishers Delhi
3. Linear Algebra, Jin Ho Kwak and Sungpyo Hong, Springer international edition
4. Mechanical Vibration, Singiresu S. Rao, Pearson Education, Inc
5. Applied Numerical Analysis, Curtis F. Gerald and Patrick O. Wheatley, Pearson Education, Inc
6. Essential Mathematical Methods for Physicists, Hans J. Weber and G. B. Arfken, Academic Press

Semester – I Advanced Machine Design [502402]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect/Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
502402	4	50	50	-	-	100	4

1. Theory of Elasticity

State of stress at a point, stress components on an arbitrary plane, principal stresses, plane stress, differential equations of equilibrium, boundary conditions. State of strain at a point, plane strain, compatibility conditions, generalized Hooke's Law, relations between elastic constants, displacement equations of equilibrium. Elasticity problems in two dimension and three Dimensions, Airy's Stress Function In Rectangular & Polar Coordinates.

2. Theories of Failure:

Maximum principal stress theory, maximum shear stress theory, maximum elastic strain theory, octahedral shearing stress theory, distortion energy theory, Mohr's theory, significance of theory of failure.

3. Energy Methods

Elastic strain energy, strain energy due to axial force, shear force, torsion, bending moment, Castigliano's theorems, theory of virtual work and energy, Raleigh-Ritz method and Galerkin's method.

4. Design For Fatigue, Brittle Fracture And Creep

Introduction, Fatigue strength, factors affecting fatigue behaviour, Influence of super imposed static stress, Cumulative fatigue damage, fatigue under complex stresses, Fatigue strength after over stresses, True stress and true strength. Design for brittle fracture. Mechanism of creep of material at high temperature, Exponential creep law, hyperbolic sine creep law, stress relaxation, bending etc

5. Composite Materials

Composite materials and structures, classical lamination theory, elastic stress analysis of composite material, Fatigue strength improvement techniques, stresses, stress concentration around cut outs in composite laminates, stability of composite laminate plates and shells, Hybrid materials, applications

6. Theory of Plasticity

Fundamental aspects of general inelastic behavior, Stress-strain curves –plastic flow conditions – Von Mises and Tresca criteria –plastic work –simple applications –elasto-plastic analysis for bending and torsion of bars –residual stresses.

Introduction to Viscoelasticity: Rheological models, Maxwell model, Kelvin model and the four-element Maxwell-Kelvin model.

Semester – I Computer Aided Design [502403]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect/Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
502403	4	50	50	-	-	100	4

1. CAD Tools

Definition of CAD Tools, Types of system, CAD/CAM system evaluation Criteria, Graphics standards, functional areas of CAD, Modeling and viewing, software documentation, efficient use of CAD software.

Wire frame modeling -Types of mathematical representation of curves, wire frame models, wire frame entities, parametric representation of synthetic curves - Hermite cubic splines, Bezier curves, B-Splines, rational curves - NURBS.

2. Surface & Solid Modeling

Surface Modeling: Mathematical representation of surfaces, Surface model, Surface entities, surface representation, Parametric representation of surfaces, plane surface, ruled surface, surface of revolution, Tabulated surface.

Solid Modeling: Introduction to - Boundary Representation (B-rep), Constructive Solid Geometry (CSG) and other methods. Coordinate system, Modeling features, Feature entities. Geometric constraints, Datum Plane.

3. Parametric Representation Of Synthetic Surfaces

Hermite Bicubic surface, Bezier surface, B-Spline surface, COONs surface, Blending surface, Sculptured surface, Surface manipulation - Displaying, Segmentation, Trimming, Intersection, Transformations - 2D and 3D, Orthogonal and Perspective transformations.

4. Drafting & Assembly

Drafting features, Customization, 3D sketches, Feature manipulation, Datum features, Modeling operation Strategy, Modeling aids & tools, Generalized views, Presentation of dimensioning / tolerances/symbols & annotation.

Different approaches of creating an assembly, Associatively, Parent child relationship, Parametric design, Concept of computer animation. Manual explode view.

5. Advanced Modeling Concepts:

Feature Based Modeling, Assembly Modeling, Behavioral Modeling, Conceptual Design & Top-down Design. Techniques for visual realism - hidden line - Surface removal - Algorithms for shading and Rendering. Parametric and variational modeling, Feature recognition, Design by features, Assembly and Tolerance Modeling, Tolerance representation - specification, analysis and synthesis, AI in Design.

6. Collaborative Engineering:

Collaborative Design, Principles, Approaches, Tools, Design Systems. Product Data Management (PDM).

CAD/CAM Data Exchange: Need, Evaluation of data- exchange formats, IGES data representations and structure, STEP Architecture, implementation, ACIS & DXF.

Reference Books:

6. Singeresu S. Rao, **Engineering Optimization-Theory and Practice**, New Age International Limited Publishers, 2000.
7. Johnson Ray, C. **Optimum Design of Mechanical Elements**, Wiley, John & Sons, 1981.
8. P. Radhakrishnan, S. Subramanyam, **CAD/CAM/CIM**, New Age International.
9. V. Ramamurti, **Computer Aided Mechanical Design and Analysis**, Tata Mc Graw Hill-1992.

Software Documentation, tutorials, manuals of following software:

1. UG/NX
2. Solid Works
3. CATIA
4. Autodesk Inventor Professional
5. AutoCAD
6. Open CASCADE
7. ANSYS Design Modeller
8. Pro/E

University of Pune

Semester – I Research Methodology [502104]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect. /Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
502104	4	50	50	-	-	100	4

1. Introduction

Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Criteria of Good Research

2. Research Problem and Research Design:

Definition of good research problem, Feasibility study of research problem, Importance of research problem, Sources of research problem, Criteria of good research problem, Meaning of Hypothesis, Characteristics of Hypothesis, Errors in selecting a research problem, Concept & need of research design, Meaning of variable, Selection of variables

3. Mathematical Modelling and prediction of performance:

Steps in Setting up a computer model to predict performance of experimental system, Validation of results, Multi-scale modelling and verifying performance of process system, Nonlinear analysis of system and asymptotic analysis, Verifying if assumptions hold true for a given apparatus setup, Plotting family of performance curves to study trends and tendencies, Sensitivity analysis.

4. Basic instrumentation:

Instrumentation schemes, Static and dynamic characteristics of instruments used in experimental set up, Performance under flow or motion conditions, Data collection using a digital computer system, Linear scaling for receiver and fidelity of instrument, Role of DSP in data collection in noisy environment, Good measurement practice.

5. Applied statistics:

Regression analysis, curve fitting and developing Correlation, Parameter estimation, Multivariate statistics, Principal component analysis, Moments and response curve methods, State vector machines and uncertainty analysis, Probable errors in the research, Error analysis and methods to reduce errors in research process.

6. Research report writing and Publication

Research Report: Dissemination of research findings, outline and structure of research report, different steps and precautions while writing research report, methods and significance of referencing

Publishing Research work: Selection of suitable journal for publishing research work, Open access Vs Subscription Journals, Identifying indexing of selected journals, Impact factor of the journal, structure of research paper, Check for plagiarism of the article, Research paper submission and review process.

Lab Practice:

1. Write Sample research proposal of the planned research topic giving details of topic, significance, funding required etc.
2. Write a research paper on review of at least 5 research papers for a research topic (Language, formatting and authors guidelines to be strictly followed from standard Springer or Elsevier Journals and referred journal details to be mentioned in the Lab practice file) and verify the research article for plagiarism and attach the plagiarism report.

Reference Books:

1. Research methodology: an Introduction for Science & Engineering students, by Stuart Melville and Wayne Goddard
2. Research Methodology: Methods and Trends, by Dr. C. R. Kothari
3. Research Methodology: An Introduction by Wayne Goddard and Stuart Melville
4. Research Methodology: A Step by Step Guide for Beginners, by Ranjit Kumar, 2nd Edition
5. Operational Research by Dr. S.D. Sharma, Kedar Nath Ram Nath & Co.
6. Software Engineering by Pressman

ME2I – M2	Financial Management	ME2I – M7	Engineering Economics
ME2I – M3	Financial Costing	ME2I – M8	Technology Forecasting
ME2I – M4	Project Management	ME2I – M9	Technology Transfer
ME2I – M5	Energy Efficient Technologies in Electrical Systems	ME2I – M10	Human Rights
Modules of 1 Credit (Select any One)			
Code No.	Title	Code No.	Title
ME1I – M10	Environmental Pollution and Control	ME1I – M11	Intellectual Property Rights

Note: For e.g., ME2I-M1 indicates

ME – Common to all M.E. Mechanical Courses, **2** – 2 Credits, **I** – Elective I, **M1** – Module 1

ME2I – M1 Energy Audit and Management

Definition, Energy audit- need, Types of energy audit, Energy management (audit) approach- understanding energy costs, Bench marking, Energy performance, Matching energy use to requirement, Maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution, Energy audit instruments
Report on Preliminary Energy Audit for Domestic Billing.

Reference Books: 1. Guide Books, Bureau of Energy Efficiency

ME2I – M2 Financial Management

Investment-need, Appraisal and criteria, Financial analysis techniques- Simple payback period, Return on investment, Net present value, Internal rate of return, Cash flows, Risk and sensitivity analysis, Financing options, Energy performance contracting and role of Energy Service Companies (ESCOS).

Reference Books: 1. Guide Books, Bureau of Energy Efficiency

ME2I – M3 Financial Costing

Significance, Traditional absorption costing, Marginal costing, Contract costing, Activity based costing, Process costing

Reference Books: 1. Cost Accounting, N K Prasad, Book Syndicate Pvt. Ltd.

ME2I – M4 Project Management

Definition and scope of project, Technical design, Financing, Contracting, Implementation and performance monitoring. Implementation plan for top management, Planning Budget, Procurement Procedures, Construction, Measurement & Verification.

Reference Books: 1. Guide Books, Bureau of Energy Efficiency

ME2I – M5 Energy Efficient Technologies in Electrical Systems

Maximum demand controllers, Automatic power factor controllers, Energy efficient motors, Soft

starters with energy saver, Variable speed drives, Energy efficient transformers, Electronic ballast, Occupancy sensors, Energy efficient lighting controls.

Reference Books: 1. Guide Books, Bureau of Energy Efficiency

ME2I – M6 Operation Management

Introduction, Importance, Operating systems models, key decisions, Planning and controlling, Strategic approach, Processes and systems, supply chain or network approach, Technology and knowledge management, Quality Management, Operations - Challenges, Opportunities, Excellence, risk management and sustainability, Case studies

Reference Books:

1. Operations Management - An Integrated Approach, Danny Samson and Prakash J. Singh, Cambridge University Press
2. Modern production/Operations Management, 8th Edition, E.S. Buffa and R. K. Sarin, John Wiley & Sons.

ME2I – M7 Engineering Economics

Fundamentals, Markets and Government in a Modern economy, Basic Elements of Supply and Demand, Demand and Consumer Behavior, Analysis of Perfectly Competitive Markets, Unemployment, Inflation and Economic policy

Reference Books: 1. Economics, Samuelson Nordhaus, Tata McGraw Hill

ME2I – M8 Technology Forecasting

Approaches, Technology Performance Parameters, Use of Experts in Technology Forecasting, Planning, Technology Progress. Morphological Analysis of a Technology System.

ME2I – M9 Technology Transfer

Definition, Source of Technology Transfer [TT], Model of TT with Public and Private Enterprises, Success and Failure Factors in Technology Transfer. The concepts of Invention and Innovation, Definition and classifications of Research and Development, New Product Development, Challenges in Commercializing Research Results.

Reference Books: 1. Gerard H. Gaynor, Hand Book of Technology Management, Mc Graw Hill.

ME2I – M10 Human Rights

Human Rights – Concept, Development, Evolution, Philosophical, Sociological and Political debates, Benchmarks of Human Rights Movement. Human Rights and the Indian Constitution Human Rights & State Mechanisms, Police & Human Rights, Judiciary & Human Rights, Prisons & Human Rights, National and State Human Rights Commissions, Human Rights of the Different Sections and contemporary issues, Citizens' Role and Civil Society, Human Rights and the international scene

Primary Information with reference to Engineering Industry

Ref. Books: 1) *Study material on UNESCO, UNICEF web site*, 2) *HUMAN RIGHTS IN INDIA A MAPPING*, Usha Ramanathan, 3) *Introduction to International Humanitarian Law* by Curtis F. J. Doebbler - CD Publishing, 2005. *This book is an introductory text on international humanitarian law (the laws of war) that provides the basics of law, including excerpts from some of the leading treaty texts. Perfect for a short course in the law -- one to five weeks*, 4) *Freedom of Information* by Toby Mendel - UNESCO, 2008

ME1I – M11 Environmental Pollution and Control

Pollution and Environmental Ethics, Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards Environmental impact and economic aspects, Emission standards and regulations for Automobiles.

Reference Books:

1. Environmental Pollution and Control, J. Jeffrey Peirce, P Aarne Vesilind, Ruth Weiner,

Butterworth-Heinemann

2. Environmental Pollution Control Engineering, C.S. Rao, New Age International

ME11 – M12 Intellectual Property Rights

Patentable and non-patentable inventions, statutory exceptions, Persons entitled to apply for patents. Report on simple case study for IPR submission.

Reference Books: 1. Satyawrat Ponkshe, The Management of Intellectual Property, by, Ponkshe & Bhate Publications, Pune.

Semester – I Lab Practice – I [502406]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Pr/Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
502406	4	-	-	50	50	100	4

Lab. work or Assignments have to be carried out at respective labs as mentioned in the syllabus of respective subjects excluding Research Methodology and Elective. It is to be submitted as term work at the end of semester after continuous assessment of each by respective teacher. Assessment of term work has to be carried out as per R-1.4 and R-1.5 of PG Rules and Regulations of Credit System. (Refer University web site)

Geometric Modelling & Analysis

Solid modelling, assembly modelling, drafting assignments using software like UNIGRAPHICS, Solid Works, CATIA, Pro/Engineer, I-DEAS, Autodesk Inventor, etc and study of the various facilities in these software's.

Finite Element Analysis Assignments using software's like ANSYS, Hyper Mesh Ls-Dyna, Abacus etc. (Failure related)

List of Assignments

1. Surface Modelling of Mechanical Components.
2. Drafting and modeling of machine parts with assembly using suitable software.
3. Assignment on design for fatigue, fracture and creep.
4. Assignment on Plasticity.
5. Case study on failure analysis of mechanical components.

Semester - II

Computer Integrated Manufacturing [502407]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect/Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
502407	4	50	50	-	-	100	4

1. Concept Of CIM

Introduction to CIM, Types of Manufacturing, CIM hardware and software, Elements of CIM, Product development through CIM Design Activities in a networked environment, networking in a manufacturing company, hardware elements of networking.

2. CIM Database

Introduction, Database requirements of CIM, Database, Database management, Database Models, EDM, Product Data Management (PDM), Advantage of PDM. , Collaboration Engineering.

3. Work Cell & Flexible Manufacturing System

Manufacturing cell, Group Technology, Cellular Manufacturing. DNC system and transfer of program from PC to machine. Introduction to FMS, Manufacturing integration model, flexible manufacturing strategy, Components of Flexible Manufacturing-Pallets and fixtures, machining centers, inspection equipment, material handling stations, storage system, In-process storage, manually operated stations, allied operation centers

4. Integrative Manufacturing Planning And Control

Role of integrative manufacturing in CAD/CAM integration, Over view of production control - Forecasting, Master production schedule, Capacity planning, M.R.P., Order release, Shop-floor control, Quality assurance, Planning and control systems, Cellular manufacturing, JIT manufacturing philosophy.

5. Web Based Manufacturing

Integrating process with web, Process management and control through web, Applications of web based manufacturing, casting, machining, forming & forging.

6. Future Trends In Manufacturing Systems

Lean Manufacturing: Definition, Principles of Lean Manufacturing, Characteristics of Lean Manufacturing, Value of Product, Continuous Improvement, Focus on Waste, Relationship of Waste to Profit, Four Functions of Lean Production, Performance Measures, The Supply Chain, Benefits of Lean Manufacturing. Introduction to Agile and Web Based Manufacturing systems.

Semester - II

Industrial Product Design & Product Lifecycle Management [502408]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect/Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
502408	4	50	50	-	-	100	4

1. Product Development

Design creativity-innovations in design alternatives. Modern product development process, reverse engineering and redesign product development process, scoping product development – S-curve, new product development.

The phases of product design process, Modern approaches to product design: Concurrent Design, Quality Function Development (QFD), Rapid Prototyping

2. Understanding Customer Needs & Generating Concepts

Economic factors influencing design, product value, safety, reliability & environmental considerations, economic analysis, break even analysis, profit & competitiveness, economics of new product design.

FAST method, establishing system functionality.

GENERATING CONCEPTS: Information gathering, brain ball, C-sketch/6-3-5 method, morphological analysis, concept selection, technical feasibility, ranking, measurement theory, DFMA, design for robustness.

3. Product Tear Down and Value engineering

Tear down method, post teardown report, benchmarking and establishing engineering specifications, product portfolios.

Value engineering in product design: Introduction, historical perspective, nature & measurement of value, importance of value, value analysis job plan, steps for solving & value analysis, value analysis tests

4. Product Lifecycle Management

Concept of Product Life Cycle, Components / Elements of PLM, Emergence of PLM, Significance of PLM, Customer Involvement, Threads of PLM-computer aided design (CAD), Product data management (PDM), Comparison of PLM to Enterprises Resource planning (ERP). Integration of PLM & CAD, Introduction to PLM tools.

5. Product Lifecycle Environment

Product Data and Product Workflow, The Link between Product Data and Product Workflow, Key Management Issues around Product Data and Product Workflow, Developing a PLM strategy, Strategy identification and selection, PLM System Architecture (2tier/3tier/4tier etc).

Concept of cloud PLM.

6. Product Data Management

Benefits and Terminology, CIM Data, PDM functions, definition and architectures of PDM systems, Engineering data, engineering workflow and PDM acquisition and implementation, Resolving Data Issues, product data interchange, collaborative product development, Internet and developments in client server computing, portal integration. Components of a typical PDM setup - hardware and document management – creation and viewing of documents - creating parts-version - control of parts and documents, configuration management for product structure, change management and associated activities.

Automated Manufacturing System Modelling [502409]

CODE	TEACHING SCHEME	EXAMINATION SCHEME				CREDITS	
	Lect/Week	Paper		TW	Oral/ Presentation		Total
		In Semester Assessment	End Semester Assessment				
502409	4	50	50	-	-	100	4

1. Introduction

Automation in Production System, Principles and Strategies of Automation, Basic Elements of an Automated System, Advanced Automation Functions, Levels of Automations, introduction to automation productivity, programmable logic controllers.

2. Automated Manufacturing Systems

Components, Classification and Overview of Manufacturing Systems, Manufacturing Cells, GT and Cellular Manufacturing, FMS, FMS and its Planning and Implementation, Flow lines & Transfer Mechanisms, Fundamentals and Analysis of Transfer Lines, product design for automatic assembly.

3. Pneumatic and hydraulic components and circuits:

Boolean algebra, pneumatic sensors and amplifiers, jet destruction devices, logic devices, schimit triggering devices, developing pneumatic circuits for automatic die casting machine.

4. Manufacturing Plant Automation

Introduction, need for system Modeling, Building Mathematical Model of a manufacturing Plant, Modern Tools- Artificial neural networks in manufacturing automation, AI in manufacturing, Fuzzy decision and control, cellular manufacturing.

5. Manufacturing Enterprise System.

Inspection principles and strategies, automated inspection, contact Vs non contact, CMM. Manufacturing support systems.

Gathering the data, user data requirement, data formats, data optimization and security, Concept Internet of things (IOT) in manufacturing system

6. System Models.

Discrete & Continuous time Markov Chain Model, Markov Model of transfer lines, Queues, Notation & examples, Queuing Networks, Classical Petri Nets, and Stochastic Petri Nets. GSPN modeling of KANBAN system

Reference Books:

Modules of 1 Credit			
Code No.	Title		
CAD1II – M2	Plate Bending Problems – Plate And Shell Elements	CAD1II – M7	Turbulence Modeling
CAD1II – M12	Relational Database Design	CAD1II– M14	File & System Structure
CAD1II – M20	Computer-Based System Engineering	CAD1II– M21	Rapid Development
CAD1II – M22	Solid Modelling Algorithms		

CAD2II – M1: Isoparametric Elements and Formulation of Plane Elasticity Problems

Introduction, shape functions – linear & quadratic, displacement function – criteria for the choice of the displacement function, polynomial displacement functions, displacement function in terms of nodal parameters, strain-nodal parameter relationship, stress-strain relationship, element stiffness matrix, convergence of isoparametric elements, numerical integration – Trapezoidal rule, Simpson's 1/3 rule, Newton-Cotes Formula, Gauss Quadrature formula, Gauss Quadrature in two and three dimensions.

Introduction, thin and thick plates – Kirchhoff theory, Mindlin plate element, triangular and rectangular, conforming and nonconforming elements, degenerated shell elements, reduced and selective integration, shear locking and hour glass phenomenon.

CAD2II – M3: Nonlinear Problems – Geometric, Material and Contact Problems

Introduction to non-linear analysis, formulation for geometrical, material and contact nonlinear problems, Nonlinear equation solving procedure - direct iteration, Newton-Raphson method, modified Newton-Raphson method, incremental techniques.

CAD2II – M4: Dynamic Problems – Eigen Value and Time Dependent Problems

Formulation of dynamic problems, consistent and lumped mass matrices Solution of Eigen value

problems – transformation methods, Jacobi method, Vector Iteration methods, subspace iteration method Forced vibration – steady state and transient vibration analysis, modelling of damping, the mode superposition scheme, direct integration methods – implicit and explicit numerical integration.

8. Reddy, J. N., **An Introduction to Nonlinear Finite Element Analysis**, Oxford University Press, 2010.
9. Dixit U. S., **Finite Element Methods for Engineers**, Cengage Learning India Pvt. Ltd., 2009.

CAD2II – M5: Finite Difference Solutions

Parabolic PDEs – Euler, Crank Nicholson, Implicit methods, Elliptic PDEs – Jacobi, Gauss Seidel, ADI, methods. FD- solution for Viscous incompressible flow using Stream function – Vorticity method & MAC method.

CAD2II – M6: Finite Volume Methods

Introduction to finite volume method, finite volume formulations for diffusion equation, convection diffusion equation. Solution algorithm for pressure velocity coupling in steady flows. Use of staggered grids simple algorithm.

CAD2II – M7: Turbulence Modeling

Turbulence energy equation- one-equation model, the k- ω model, the k- ϵ model

Reference Books:

7. Patankar, S.V, **Numerical Heat Transfer and Fluid flow**, Hemisphere Publishing Company, New York, 1980.

CAD2II – M8: Advanced Materials

HSLA steels, tool and die materials, alloy cast irons, stainless steels, PH and maraging steels, materials for low temperature applications, refractory metals and super alloys, Hadfield steels, ball bearing steels and bearing metals.

CAD2II – M9: Alloys

Automobile alloys and aerospace alloys, Inter metallics, Ni and Ti Aluminides - Smart materials, shape memory alloys -Metallic glass - Quasi crystal and nano Crystalline materials.

CAD2II – M10: Ceramics

Ceramic crystal structures – Binary ceramic structures: Rock salt, Fluorite, Rutile and Silica structures. Ternary ceramic structures. Introduction to phase equilibria in ceramics, Phase equilibrium diagrams and composition calculations. Thermal, Electrical, magnetic and optical behavior of ceramics, Mechanical behavior of ceramics, Engineering ceramics and their applications, (Glass and Glass-ceramics, Aluminum oxide, Silicon nitride, Zirconia and zirconia-Toughened Aluminum, Sialons)

CAD2II – M11: Composites

Fundamentals, Definition, classification of composite materials, laws of mixtures, factors affecting composite properties: interfacial bonding. Mechanical Behaviour of composite, Young's Modulus and strength considerations for continuous FRCs & short FRCs, Toughening Mechanisms in composites. Fabrication & Properties of fibers-Glass fibers, carbon fibers, Aramid fibers, Silicon Carbide Fibers & Metallic Glasses.

Reference Books:

1. R.S.Kurmi & R.S.Sedha, **Material Science**, S. Chand & company Ltd.
2. Thomas H. Courtney, **Mechanical Behavior of Materials**, McGraw-Hill.
3. Michael F. Ashby, **Material Selection in Mechanical Design**, Butterworth-Heinemann Ltd.
4. Flinn, R.A. and Trojan, P.K., **Engineering Materials and their Applications**, Wiley 1995.
5. Issac Daniel, Ori Ishai, **Engineering Mechanics of Composite Materials**, Oxford University Press, 2006.

CAD2II – M12: Relational Database Design

Relational model and relational database design: Structure of relational database, former query languages, commercial query languages. Modifying the database views. Pitfalls in relational database design and normalization.

CAD2II – M13: Data Models

Network data model and hierarchical data model: data structure diagram, the DBTCCODASYL. Model data retrieval Update and set processing facility, three structure diagram, data retrieval and update facility, virtual records.

CAD2II – M14: File & System Structure

File and System Structure, Indexing and Hashing: Physical storage media – file organization, buffer management, Mapping relations, networks and hierarchies to files – Index – sequential files. Bi-tree indexed files.

CAD2II – M15: Distributed Database

Distributed database, security and integrity: Design, transparency and autonomy, query processing, recovery, concurrency control, deadlock handling and coordinator selection. Security and integrity, near database application.

Reference Books:

1. Korth, H.F. Silbenhartz, A., **Database Concepts**, Mc Graw Hill, 1986.
2. Gio Wiederhold, **Database Design**, Mc Graw Hill, 1983.
3. Jefferey O Ullman, **Principles of database systems**.
4. C.J. Date, **An Introduction to database systems**, Addison Wisely, 1980.
5. Trembley and Soreson, **An Introduction to Data structures with applications**, Mc Graw Hills.

CAD2II – M16: Web Languages

Web: History of Web application, W3C, Introduction to various web building technologies. Mark up languages: Use of markup languages in building web applications, Hypertext Markup language (HTML), (Extensible mark-up Language) XML, XML Parsers: What is parsing, Types of parsers, benefits and limitations of each parser.

CAD2II – M17: J2EE Technologies

JSP- What is JSP, JSP architecture, Session in JSP, Cookies and use of cookies. Servlet- Introduction to Servlet technology, web container, Methods of Servlet, Lifecycle of a servlet, advantages of servlet, HTTP session listener and filters in servlet.

CAD2II – M18: EJB3, AJAX

Introduction to Application server, Features of enterprise beans, benefits of EJB, Annotations, Introduction to POJO, stateless and stateful session beans.

Ajax- Introduction to framework, rule of ajax in enhancing user experience, ajax examples. Distributed Computing Concepts of Client-Server Architecture (2-Tier, 4-Tier, n-Tier).

CAD2II – M19: Tools for Customization

Object Oriented Programming (OOP), OLE interfaces in CAD/CAM software; Use of General programming interfaces like VB, VBS, VC++, Open GL programming and System dependent programming interfaces like Visual LISP (AutoCAD), GRIP (Unigraphics), Pro-Programming (Pro/Engineer)

CAD2II – M20: Computer-Based System Engineering

System Engineering process, Software product development life cycle, software processes, software development project management, software prototyping.

Reference Books:

1. Ian Sommerville, **Software Engineering**, Pearson Education.
2. Foley, van Dam, **Computer Graphics**, Pearson Education.
3. Mason Woo, et al, **OpenGL Programming Guide**.
4. George Omura, **Advanced AutoCAD**.
5. Sham Tickoo, **Customizing AutoCAD**, Thomson learning

CAD2II – M21: Rapid Development

Core issues in rapid development, rapid development languages, lifecycle planning and customer oriented development.

Reference Books:

1. Steve McConnell, **Rapid development**, Microsoft Press.

CAD2II – M22: Solid Modelling Algorithms

Euler operations, basic solid modelling algorithms

CAD2II – M23: Automated Solid Modeling Using Customization:

Creating 2D, 3D and solid entities through API, Editing 2D, 3D and solid entities through API, Design and development of user interfaces - icons, menus, dialog boxes, Integrating databases with CAD; creating BOM or part lists, Automated Assembly modelling through customization, Automated drafting and dimensioning using customization, Creating Automated Animations using API and animation software.

Reference Books:

1. Martti Mantilya, **Solid Modelling**, Computer Science Press.

Semester – II Lab Practice – II [502411]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Pr /Week	Paper		TW	Oral/ Presentat ion	Total	
		In Semester Assessment	End Semester Assessment				
502411	4	-	-	50	50	100	4

Lab. work or Assignments have to be carried out at respective labs as mentioned in the syllabus of respective subjects excluding Elective. It is to be submitted as term work at the end of semester after continuous assessment of each by respective teacher. Assessment of term work has to be carried out as per R-1.4 and R-1.5 of PG Rules and Regulations of Credit System. (Refer University web site)

SIMULATION & OPTIMIZATION

04- 06 Assignment on real life problems of manufacturing systems and manufacturing processes to be simulated using simulation software's as ARENA, FORGE, FASTFORM ADVANCED, PAMSTAMP,

SIMUFACT FORMING etc. Assignments on optimization using any process/product optimization software.

Assignments:

1. Assignment on Finite Element Simulation of Cooling/Heating Process.
2. Assignment on Finite Element Simulation of Bending Process.
2. Assignment of Finite Element Simulation of Drawing/Forming.
4. Assignment on Tool Path Simulation of Turning/Milling.
5. Assignment on Process Optimization.

Seminar – I, II and III [502412, 602416, 602418]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Pr /Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
502412	4	-	-	50	50	100	4
602416	4	-	-	50	50	100	4
602418	5	-	-	50	50	100	5

Assessment of Seminar has to be carried out as per R-1.4 and R-1.5 of PG Rules and Regulations of Credit System.

INSTRUCTIONS FOR SEMINAR I/II/III REPORT WRITING

It is important that the procedures listed below be carefully followed by all the students of M.E. (Mechanical Engineering).

1. Prepare 3 **COPIES** of your manuscript.
2. Limit your project report to preferably
 - a) 15-20 manuscript pages Seminar I
 - b) 20-25 manuscript pages Seminar II
 - c) 25-30 manuscript pages Seminar III

3. The footer

For Computer Aided Design, Manufacture & Engineering

Institute Name, Mechanical (CADME) Bookman Old Style 10 pt. and centrally aligned.

4. Page number at second line of footer, Bookman Old Style 10 Pt, centrally aligned
5. Print the manuscript using
 - a) Letter quality computer printing.
 - b) The main part of manuscript should be Bookman Old Style 12 pt. and justified.
 - c) Use 1.5 line spacing.
 - d) Entire report shall be one chapter. No chapters for Seminar I, II, and III.
 - e) Seminar I shall not have last section as Conclusions, it will be summary only.
6. Use the paper size **8.5'' × 11''** or **A4 (210 × 197 mm)**. Please follow the margins given below.

Margin Location	Paper 8.5'' × 11''	Paper A4 (210 × 197 mm)
Top	1''	25.4 mm
Left	1.5''	37 mm
Bottom	1.25''	32 mm
Right	1''	25.4 mm

University of Pune

7. All paragraphs will be 1.5 line spaced with a one blank line between each paragraph. Each paragraph will begin with without any indentation.
8. Section titles should be bold with 14 pt typed in all capital letters and should be left aligned.
9. Sub-Section headings should be aligning at the left with 12 pt, bold and Title Case (the first letter of each word is to be capitalized).
10. Illustrations (charts, drawings, photographs, figures) are to be in the text. Use only illustrations really pertinent to the text. Illustrations must be sharp, clear.
 - a) Illustrations should not be more than **two** per page. One could be ideal
 - b) Figure No. and Title at bottom with **12 pt**
 - c) Legends below the title in **10 pt**
 - d) Leave proper margin in all sides
 - e) Illustrations as far as possible should not be xeroxed.
11. **Photographs** if any should of glossy prints
12. Please use **SI** system of units. If students would like to add the equivalent in inch-pound (British) units, they must be stated in parenthesis after the **SI** units. In case the final result comes out in any other units (say due to empirical formula etc.) covert the unit to **SI** unit.
13. Please **number the pages** on the front side, centrally below the footer
14. **References** should be either in order as they appear in the thesis or in alphabetical order by last name of first author
15. **Symbols** and **notations** if any should be included in nomenclature section only
16. Following will be the order of report
 - i. **Cover page** and **Front page** as per specimen on separate sheet
 - ii. **Certificate** from institute as per specimen on separate sheet
 - iii. **Acknowledgement**
 - iv. **List of Figures**
 - v. **List of Tables**
 - vi. **Nomenclature**
 - vii. **Contents**
 - viii. **Abstract** (A brief abstract of the report not more than **150 words**. The heading of abstract i.e. word “Abstract” should be **bold, Bookman Old Style, 12 pt** and should be typed at the **centre**. The contents of abstract should be typed on new line without space between heading and contents. Try to include one or two sentences each on **motive, method, key-results** and **conclusions** in Abstract.
 - ix. Section : Introduction
 - x. References
17. All section headings and subheadings should be numbered. For sections use numbers **1, 2, 3,** and for subheadings **1.1, 1.2,** etc and section subheadings **2.1.1, 2.1.2,** etc.

18. **References** should be given in the body of the text and well spread. No verbatim copy or excessive text from only one or two references. If **figures** and **tables** are taken from any reference then indicate source of it. Please follow the following procedure for references.

Semester - III Simulation Modeling [602413]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect/Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
602413	4	50	50	-	-	100	4

1. Introduction To Simulation

Definition – history - nature of computer Modelling and simulation, limitations of simulation, areas of application. System and environment: Components of a system – types of simulation - discrete and continuous systems. Modelling approaches – simulation examples - manual simulation using event scheduling, single channel queue, two server queue, simulation of inventory problem.

2. Random Number Generation And Testing

Techniques for generating random numbers – mid square method – mid product method - constant multiplier technique - additive congruential method - linear congruential method – combined linear congruential generators – feedback shift register generators - tests for random numbers – frequency test - the Kolmogorov-Smirnov test, the chi-square test. Independence test – runs up and runs down, runs above and below the mean, autocorrelation.

3. Random Variate Generation

Inverse transform technique - exponential distribution, uniform distribution, Weibull distribution, Triangular distribution. Empirical continuous distribution - generating approximate normal variates - Erlang distribution. empirical discrete distribution - discrete uniform distribution-poisson distribution - geometric distribution - acceptance - rejection technique for poisson distribution - gamma distribution.

4. Stages In Model Building

Input modelling – data collection, identifying the distribution with data, parameter estimation, goodness of fit tests, selecting input models without data, models of arrival processes. Verification and validation of simulation models – variance reduction techniques, antithetic variables, calibration and validation of models. output analysis – stochastic nature of output data, measures of performance and their estimation, output analysis for terminating simulation.

5. Manufacturing Systems Modelling

Objectives and performance measures – modelling system randomness – sources of randomness, machine downtime – case study.

6. Introduction To Simulation Packages And Exercises

Model building using SIMULATION PACKAGES.

Semester – III Optimization Techniques [602414]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect/Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
602414	4	50	50	-	-	100	4

1. Introduction To Optimization Theory

Introduction to optimization, formulation of optimization problem, Classification of optimization problems, Optimum design of components like pins, beams, columns, shafts, spur gears, pressure vessels, etc.

2. Linear Programming

Linear programming, simplex method and duality in linear programming, sensitivity or post-optimality analysis, Karmarkar's method

3. One Dimensional Optimization

One dimensional minimization, optimality criterion, minimum bracketing methods like exhaustive search method, bounding phase method; optimum seeking methods like interval halving, golden section search, successive quadratic estimation, Newton Raphson, bisection, secant, cubic search method

4. Multi-Dimensional Optimization

Multivariable unconstrained optimization, optimality criteria, direct search methods Powell's conjugate direction method; gradient search methods like Cauchy's method, Newton's method, conjugate gradient method and variable metric method.

5. Constraint Based Optimization Methods

Constrained Optimization, Optimality conditions, Optimization methods like penalty function method, method of multipliers, variable elimination method, complex search method, random search method, cutting plane method, feasible direction method, generalized reduced gradient method

6. Evolutionary Optimization

Introduction, working & Advantages of Genetic Algorithm, Simulated Annealing, Particle Swarm Optimization

CAD1III – M28	Benchmarking The Supply Chain	CAD1III – M29	Managing the Supply Chain

CAD2III – M1: Metal Cutting and Mechanics Of Metal Cutting

Introduction to metal removal processes, Chip formation, forces acting on cutting tool and their measurement, Chip thickness, Theory of Ernest and Merchant, theory of Lee and Shafer, Tool wear and tool life, surface finish, thermal aspects, friction in metal cutting and testing of machine tools.

CAD2III – M2: Abrasive Processes

Introduction, Grinding wheel-designation and selection, grinding process, grinding process parameters, creep feed grinding, honing, lapping and other finishing processes

CAD2III – M3: Forming Processes

Sheet metal forming, punching, extrusion, coning. Plastic molding process, injection molding, blow molding, compression molding. Metal injection molding, powder injection molding, sintering process,

and their applications.

CAD2III – M4: Unconventional Machining Processes

Need for unconventional processes, Range of non conventional machining processes USM, WJM, AJM, chemical machining, Electrochemical machining, Electrolytic grinding, EDM, LBM, EBM, Plasma arc cutting.

CAD2III – M5: High Speed Machining

Introduction to high speed machining, economics of high speed machining, brief historical perspective, material properties at high strain rates, influence of increasing speed on chip formation, stainless steel, aerospace aluminium and titanium and recommendations.

CAD2III – M6: Liquid-Based Rapid Prototyping Systems

Stereo lithography Apparatus (SLA): Models and specifications, Process, working principle, photopolymers, photo polymerization, Layering technology, laser and laser scanning, Applications, Advantages and Disadvantages, Case studies. Solid ground curing (SGC): Model sand specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies

CAD2III – M7: Solid-Based Rapid Prototyping Systems

Laminated Object Manufacturing (LOM): Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies. Fused Deposition Modelling (FDM): Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Case studies.

CAD2III – M8: Powder Based Rapid Prototyping Systems

Selective laser sintering (SLS): Models and specifications, Process, working principle, Applications, Advantages and Disadvantages, Three dimensional printing (3DP): Models and specifications, Process, working principle, Applications, Advantages and Disadvantages. Rapid Tooling: Introduction to Rapid Tooling (RT), Conventional Tooling Vs RT, Need for RT. Rapid Tooling Classification: Indirect Rapid Tooling Methods: Spray Metal Deposition, RTV Epoxy Tools, Ceramic tools. Direct Rapid Tooling: Direct AIM, LOM Tools, DTM Rapid Tool Process, EOS Direct Tool Process and Direct Metal Tooling using 3DP.

CAD1III – M9: Rapid Prototyping Data Formats

STL Format, STL File Problems, Consequence of Building Valid and Invalid Tessellated Models, STL file Repairs: Generic Solution, Other Translators, Newly Proposed Formats. Rapid Prototyping

Software's: Features of various RP software's like Magics, Mimics, Solid View, View Expert, 3DView, Velocity 2, Rhino, STL View 3 Data Expert and 3D doctor.

CAD1III – M10: Rp Applications

Application – Material Relationship, Application in Design, Application in Engineering, Analysis and Planning, Aerospace Industry, Automotive Industry, Jewelry Industry, Coin Industry, GIS application, Arts and Architecture. RP Medical and Bioengineering Applications: Planning and simulation of complex surgery, Customised Implants & Prosthesis.

Reference/Text Books:

1. Amitabha Ghosh, **Rapid Prototyping**
2. Kalpak Jain S. and Schmid S. R., **Manufacturing Processes for Engineering Materials, Addition Wesley,**

CAD2III – M11: Material Handling Systems

Material Transport Systems - Industrial trucks, automated guided vehicle systems (AGVS), vehicle guidance technology, vehicle management and safety, monorails and other rail guided vehicles, conveyor systems, types of conveyors, conveyor operations and features, cranes and hoists, analysis of material transfer systems, charting techniques in material handling, analysis of vehicle-based systems, conveyor analysis

CAD2III – M12: Robot Kinematics

Inverse Kinematics, inverse orientation, inverse locations, Singularities, Jacobian, Trajectory Planning: joint interpolation, task space interpolation, executing user specified tasks, sensor based motion planning: The Bug Algorithm, The Tangent Bug Algorithm, The Incremental Voronoi Graph.

CAD2III – M13: Robot Force Analysis

Static force analysis of RP type and RR type planar robots, Dynamic analysis using Lagrangean and Newton-Euler formulations of RR and RP type planar robots, Independent joint control, PD and PID feedback, actuator models, nonlinearity of manipulator models, force feedback, hybrid control

CAD2III – M14: Robot Sensors And Controllers

Internal and external sensors, position, velocity and acceleration sensors, proximity sensors, force sensors, laser range finder. Robot vision: image processing fundamentals for robotic applications, image acquisition and pre-processing. Segmentation and region characterization object recognition by image matching and based on features

CAD1III – M15: Robot Programming

Robot languages: AL, AML, RAIL, RPL, VAL, demonstration of points in space: Continuous path (CP), Via points (VP), Programmed points (PP).

Reference/Text Books:

1. Nagrath and Mittal, **Robotics and Control**, Tata McGraw-Hill, 2003.
2. Spong and Vidhyasagar, **Robot Dynamics and Control**, John Wiley and sons, 2008.
3. Fu. K.S, Gonzalez, R.C., Lee, C.S.G, **Robotics, Control, Sensing, Vision And Intelligence**, McGraw Hill International, 1987
4. Steve LaValle, **Planning Algorithms**, Cambridge University. Press, New York, 2006.
5. Howie Choset, Kevin Lynch, Seth Hutchinson, George Kantor, Wolfram Burgard, Lydia Kavraki and Sebastian Thurn, **Principles of Robot Motion: Theory, Algorithms, and Implementations**, Prentice Hall of India, 2005.
6. Richard D. Klafter, Thomas A. Chmielewski and Michael Negin, **Robotic Engineering - An Integrated Approach**, Prentice-Hall of India Private Limited, 1994.

CAD2III – M16: Plastic Deformation in Metals

The flow curve, true stress, true strain, yielding criteria for ductile metals, plastic stress – strain relations, strain hardening coefficient, normal anisotropy coefficient, formability evaluations, drawability tester, high strength, low alloy steels developed for formability: HSLA steels, Dual phase

steels, DQAK steels, CHR-X steels, two- dimensional plastic, flow – slip line field theory, Mechanics of metal working, Temperature in metal working, strain rate effects, metallurgical structures, Friction and lubrication, lubricants for hot and cold working, Deformation zone geometry, workability and residual stresses.

CAD1III – M17: Forming Equipment

Types and press construction, Principle of working of Mechanical, Hydraulic and Pneumatic press. Press control system in forging equipments, Presses for hydro forming, selection of presses.

CAD2III – M18: Sheet Metal Forming

Press tool operations - classification based on type of stresses, Shearing operations (blanking and piercing), and effect of clearance, Calculation of punching force, Trimming, Shaving, Nibbling and Notching operations, Drawing and Deep drawing, redrawing, limiting draw ratio, forming limit criteria draw die design. Bending, spring back in bending. Spinning, stretch forming, Embossing, Coining, Rubber forming. Defects in formed parts. Sheet Metal Forming Dies – progressive die, compound and combination die. Die Construction, Centre of pressure calculation, Stock strip layout, Strip development

Reference/Text Books:

1. Grobh Schuler, **Metal forming handbook**, Springer Verlag Berlin, Heidelberg, 1998, ISBN-3-540-61185-1

CAD1III – M19: Just In Time Production System

JIT Logic -Pull system, Japanese approach to production elimination of waste, JIT implementation requirements, JIT application for job shops

CAD2III – M20: Kanban System

Kanban rules supplier Kanban and sequence schedule used by supplier, Monthly information & daily information, later replenish system by Kanban sequenced withdrawal P system by sequence schedule table -problems & counter measures in applying Kanban system to subcontractors - Supplier Kanban circulation in the paternal manufacturer - structure of supplier Kanban sorting office.

Reference/Text Books:

1. Yasuhiro Monden, **“Toyoto Production System -An integrated approach to Just in Time”**, Engineering and Management Press, Institute of Industrial Engineers, Norcross Georgia.

CAD1III – M21: Design For Manufacturing, Assembly And Disassembly

Principles, approaches, Product and component, DFMA, The R & D Experience, Evaluations for DFMA.

CAD1III – M22: Design For Assorted Technical Requirements/ Processes

Material storage and distribution, Dimensional control, Heat treatment, Coating, Casting, Plastic processes.

CAD1III – M23: Design For Life Cycle

Approaches to product development, Inspect ability, Serviceability.

CAD1III – M24: Design For Reliability, Quality

Approaches, QFD, Evaluations and Procedures. Design for Quality. Design for Recycling

Reference/Text Books:

1. G. H. Haung, **Design for X: Concurrent Engineering Approach**, Chapman & Hall, 1996.
2. Corrado Poli, **Design for Manufacturing: A Structured Approach**, Butterworth Heinemann
3. James Barilla, **Design for Manufacturability Handbook**, Mc Graw Hill
4. David M. Anderson, **Design for Manufacturing and Concurrent Engineering**, CIM press, 2004.

CAD1III – M25: Introduction to ERP

Introduction, Evolution of ERP, Reasons for growth of ERP, Advantages / disadvantages of ERP, Evaluation of ERP, Various

CAD1III – M26: Modules in ERP

Modules in ERP: Finance and Controlling, Sales and Distribution, Materials Management, Production Planning and Control, Quality Management, Planet Maintenance, Human Resource.

Reference/Text Books:

1. V.K. Garg & N.K. Venkitakrishnan, **ERP Ware: ERP Implementation framework**
2. V.K. Garg & N.K. Venkitakrishnan, **ERP Concepts and Planning**

CAD1III – M27: Introduction to Digital Manufacturing

A Brief History of Manufacturing, Digital Manufacturing Today, Digital Design, Digital Materials, Digital Fabrication, Digital Products, Technology Development, Applications Development, People and Business, The Digital Economy, Transition from Industrial Manufacturing.

Reference/Text Books:

1. [Zude Zhou](#), [Shane Xie](#), [Dejun Chen](#), **Fundamentals of Digital Manufacturing Science**, Springer

CAD1III – M28: Benchmarking the Supply Chain

Benchmarking the logistics process – mapping supply chain processes – supplier and distribution benchmarking – setting benchmarking priorities – identifying logistics performance indicators.

CAD1III – M29: Managing the Supply Chain

Creating logistics vision – problems with conventional organizations – developing logistics organizations - logistics as a vehicle for change – need for integration – managing supply chain as a network – process integration and ECR – co-maker ship and logistics partnerships – supplier development.

Reference/Text Books:

1. Martin Christopher, - **Logistics and Supply Chain Management – Strategies for reducing cost and improving service**, Pitman Publishing, II Edition, 1998.
2. Robert B Handfield and Ernest L Nicholas Jr., **Introduction to Supply Chain Management**, Prentice Hall, NJ, 1999.
3. Donald J Bowersox and David J Closs, **Logistical Management**, Tata McGraw Hill, New Delhi, 2000.
4. David Taylor and David Brunt, **Manufacturing Operations and Supply Chain Management**, Thomson Learning, 2001.
5. David Simchi and Levi, **Designing and Managing the Supply Chain**, McGraw Hill, 2000.

CAD2III – M30: Design of Experiments and Analysis of Variance

Experimental designs – full factorial, partial factorial, Taguchi's orthogonal array method, completely randomized block, Latin square design (only problems). ANOVA-One way and two way classifications, Multi way ANOVA.

Reference/Text Books:

1. Douglas C. Montgomery, **Design and Analysis of Experiments**, Wiley Publications

Project Stage – I and II [602417, 602419]

CODE	TEACHING SCHEME	EXAMINATION SCHEME					CREDITS
	Lect. /Week	Paper		TW	Oral/ Presentation	Total	
		In Semester Assessment	End Semester Assessment				
602417	8	-	-	50	50	100	8
602419	20	-	-	150	50	200	20

Assessment of Project stage-I has to be carried out as per R-1.4 and R-1.5 of PG Rules and Regulations of Credit System.

INSTRUCTIONS FOR DISSERTATION WRITING

It is important that the procedures listed below be carefully followed by all the students of M.E. (Mechanical Engineering).

1. Prepare 3 **COPIES** of your manuscript.
2. Limit your Dissertation report to 80 – 120 pages (preferably)
3. The footer For Computer Aided Design, Manufacture & Engineering, Institute Name, Mechanical (Computer Aided Design, Manufacture & Engineering) Times New Roman 10 pt. and centrally aligned.
4. Page number as second line of footer, Bookman Old Style, 10 Pt, centrally aligned
5. Print the manuscript using
 - a) Letter quality computer printing.
 - b) The main part of manuscript should be Times New Roman 12 pt. with alignment - justified.
 - c) Use 1.5 line spacing.
 - d) Entire report shall be of 5- 7 chapters. i.e.

Abstract (half page)

i. **Introduction** (2-3 pages) (TNR – 14 Bold)

1.1 Problem statement, Need (TNR – 12)

1.2 Objectives

1.3 Scope

1.4 Methodology

ii. **Literature Review** (20-30 pages)

Discuss the work done so far by researchers on the domain area and their significant conclusions. No derivations are expected.

iii. This chapter shall be based on your own contribution in simulation (Analytical/ Numerical) (15- 20 pages)

- iv. This chapter shall be based on either a) experimental work OR b) Finite Element / CFD Analysis (15-20 pages)
- v. **Concluding Remarks and Scope for the Future Work** (2-3 pages)

ANNEXURE (if any)

(Put all mathematical derivations, Simulation program as Annexure)

References

1. Use the paper size **8.5'' × 11''** or **A4 (210 × 197 mm)**. Please follow the margins given below.

Margin Location	Paper 8.5'' × 11''	Paper A4 (210 × 197 mm)
Top	1''	25.4 mm
Left	1.5''	37 mm
Bottom	1.25''	32 mm
Right	1''	25.4 mm

2. All paragraphs will be 1.5 lines spaced with a one blank line between each paragraph. Each paragraph will begin with without any indentation.
3. Section titles should be bold with 14 pt typed in all capital letters and should be left aligned.
4. Sub-Section headings should be aligning at the left with 12 pt, bold and Title Case (the first letter of each word is to be capitalized).
5. Illustrations (charts, drawings, photographs, figures) are to be in the text. Use only illustrations really pertinent to the text. Illustrations must be sharp, clear, **black and white**. **Illustrations downloaded from internet are not acceptable.**
- Illustrations should not be more than **two** per page. One could be ideal
 - Figure No. and Title at bottom with **12 pt**
 - Legends below the title in **10 pt**
 - Leave proper margin in all sides
 - Illustrations as far as possible should not be xeroxed.
6. **Photographs** if any should of glossy prints
7. Please use **SI** system of units only.
8. Please **number the pages** on the front side, centrally below the footer
9. **References** should be either in order as they appear in the thesis or in alphabetical order by last name of first author
10. **Symbols** and **notations** if any should be included in nomenclature section only
11. Following will be the order of report
- Cover page** and **Front page** as per specimen on separate sheet
 - Certificate** from institute as per specimen on separate sheet
 - Acknowledgements**
 - List of Figures**
 - List of Tables**
 - Nomenclature**

- vii. **Contents**
 - viii. **Abstract** (A brief abstract of the report not more than **150 words**. The heading of abstract i.e. word “Abstract” should be **bold, Times New Roman, 12 pt** and should be typed at the **centre**. The contents of abstract should be typed on new line without space between heading and contents. Try to include one or two sentences each on **motive, method, key-results** and **conclusions** in Abstract.
 - ix. Section : Introduction
 - x. References
12. All section headings and subheadings should be numbered. For sections use numbers **1, 2, 3,** and for subheadings **1.1, 1.2,** etc and section subheadings **2.1.1, 2.1.2,** etc.
13. **References** should be given in the body of the text and well spread. No verbatim copy or excessive text from only one or two references. If **figures** and **tables** are taken from any reference then indicate source of it. Please follow the following procedure for references
