

**COURSE STRUCTURE OF M. Sc. Botany Syllabus  
TO BE IMPLEMENTED FROM July 2018 (Semester I & II)  
AND FROM July 2019 (Semester III & IV)**

<b>Course No. Title of course</b>	<b>Credits allotted (80C)</b>
<b>Semester - I</b>	
	<b>(20C)</b>
BO1.1 Taxonomy -I (Algae, Fungi, Bryophytes)	4C
BO1.2 Plant Ecology	3C (Optional)
BO1.3 Genetics and Plant Breeding	3C
BO1.4 Practicals on BO1.1	5C
BO1.5 Practicals on BO1.2	2C (Optional)
BO1.6 Practicals on BO1.3	3C
<b>Semester - II</b>	
	<b>(21C)</b>
BO2.1 Taxonomy- II (Pteridophytes and Gymnosperms)	3C
BO2.2 Cell Biology	3C
BO2.3 Molecular Biology	4C
BO2.4 Plant Physiology& Biochemistry	3C
BO2.5 Practicals on BO2.1	2C
BO2.6 Practicals on BO2.2 and BO2.3	4C
BO2.7 Practicals on BO 2.4	2C
<b>Semester - III</b>	
	<b>(21C)</b>
BO3.1 Taxonomy –III (Angiosperms)	3C
BO3.2 Plant Development	3C
BO3.3 Tools and Techniques in Botany	3C (Optional)
BO 3.5 Special Paper/s-I (Any one of the following)	3C (Optional)
BO3.6 Practicals on BO3.1 and BO3.2	3C
BO3.7 Practicals on BO3.3	3C (Optional)
BO 3.8 Practicals on special Paper/s -I	3C
<b>Semester - IV</b>	
	<b>(18C)</b>
BO4.1 Biostatistics and bioinformatics	2C (Optional)
BO 4.2 Special paper/s-II	3C (Optional)
BO4.3 Practicals on BO4.1	2C (Optional)
BO 4.4 Practicals on Special paper/s-II	3C
BO 4.4 Project	8C
<b>BO 3.5 &amp; BO 4.2 Special paper I &amp; II will consist of the following papers: (any one)</b>	
BO3.5a& 4.2a Algology	3C
BO3.5b & 4.2bMycology	3C
BO3.5c& 4.2c Angiosperms Systematics	3C
BO3.5d& 4.2d Plant Ecology	3C
BO3.5e& 4.2e Plant Physiology	3C
BO3.5f& 4.2f Pharmacognosy	3C
BO3.5g & 4.2g Advanced Plant Genetics and Breeding	3C
BO3.5h& 4.2h Plant Biotechnology	3C

## BO 1.1 - Taxonomy (Algae, Fungi, Bryophytes) 4C

<b>Credits-1.5: Algae</b>	<b>23L</b>
1. Plant Systematics: Taxonomy Vs Systematics, Principles and Methods of Taxonomy: Concept of species and hierarchical taxa, Biological nomenclature (International code of Botanical Nomenclature), Classical and quantitative methods of taxonomy.	<b>2L</b>
2. Algae and their position in “Domains and Kingdoms” System, Trends in classification of algae.	<b>2L</b>
3. Cyanophyta: Ultrastructure; strategy of cell division; thallus organization, heterocyst.	<b>2L</b>
4. Brief introduction, structural and reproductive features of Chrysophyta, Xanthophyta, Bacillariophyta, Dinophyta.	<b>4L</b>
5. Chlorophyta – structure and evolution of thallus, unicellular eukaryotes (endosymbiotic theory), morphogenesis in <i>Acetabularia</i> , reproduction and life histories with reference to orders of green algae.	<b>5L</b>
6. Charophyta and Euglenophyta: structure and reproduction and interrelationship	<b>2L</b>
7. Phaeophyta: general account of morphology, anatomy, reproduction and life histories.	<b>3L</b>
8. Rhodophyta: classification, thallus structure, reproduction, reproductive strategies and life histories.	<b>3L</b>
<b>Credits - 1.5: Fungi</b>	<b>22L</b>
1. Taxonomy of fungi: Characters of fungi used of classification, various systems of classification of fungi.	<b>2L</b>
2. Chromista – Its present status in classification; general characters, classification up to orders. Lichen: types, morphology and reproduction.	<b>4L</b>
3. Fossil fungi: Occurrence and their significance.	<b>1L</b>
4. An outline of latest classification system proposed by Ainsworth or Alexopoulos	<b>3L</b>
2. Myxomycotina: structure, life cycle patterns of major classes	<b>1L</b>
3. Mastigomycotina: structure, life cycle patterns of major classes.	<b>2L</b>
4. Zygomycotina: structure, thallus organization, evolution of sexual reproductive structures.	<b>2L</b>
5. Ascomycotina: thallus organization, centrum development, different types of ascocarps	<b>3L</b>
6. Basidiomycotina: tissue differentiation, development of basidia and basidiospore	<b>2L</b>
7. Deuteromycotina: types of conidial ontogeny and fruit body organization	<b>2L</b>
<b>Credit -1: Bryophytes</b>	<b>15L</b>
1. Introduction, characteristic features and diversity of Bryophytes, Medicinal, Ecological and economic importance of Bryophytes.	<b>2L</b>
2. Systems of classification of Bryophytes.	<b>1L</b>
3. Distribution, morphological, anatomical, reproductive studies along with comparative account of sporophyte and gametophyte, interrelationships and evolutionary trends of the following orders: (development of sex organs is not included).	
(a) Sphaerocarpaceae	<b>1L</b>
(b) Calobryales, Takakiales	<b>1L</b>
(c) Marchantiales	<b>1L</b>
(d) Jungermanniales	<b>2L</b>

(e) Anthocerotales	1L
(f) Sphagnales	1L
(g) Andraeales	1L
(h) Polytrichales	1L
(i) Buxbaumiales	1L
(j) Funariales	1L
4.Fossil bryophytes	1L

## BO 1.2 Plant Ecology (3C)

**Credit 1** **15L**

**A. Concept and scope of Ecology**

1. Inter disciplinary nature of ecology and relevance to mankind 2L
2. Autecology and synecology 1L
3. Taxonomy as base for ecology 1L

**B. Population ecology**

1. Characteristics of population: Distribution and size, factors affecting population size 2L
2. Ecological limits and size of the population 2L
3. Life history strategies, r and K selection, CSR triangle 2L
4. Concept of metapopulation, types and dynamics in metapopulation 2L
5. Extinction events, population viability analysis 3L

**Credit 2** **15L**

**A. Community Ecology**

1. Community structure and species diversity: alpha, beta and gamma diversity 2L
2. Ecotone and edge effect 2L
3. Niche, evolution and coevolution 2L
4. Control processes: homeostasis and homeorhesis 2L

**B. Community interactions**

1. Plant-plant interaction, Concept of allelopathy, parasitism, dimorphism 3L
2. Species interaction: Mutualism, commensalism, competition, predation, herbivory 2L
3. Community analysis methods 2L

**Credit 3** **15L**

**A. Ecosystem ecology**

1. Development of ecosystem: Succession 1L
2. Organization of ecosystem: Biotic and abiotic components 1L
3. Ecosystem types: Natural and artificial 2L
4. Perturbation in ecosystems: Natural and anthropogenic 2L
5. Resistance and resilience in ecosystem 2L

**B. Applied Ecology**

1. Sources of pollution (air, water and soil) 2L
2. Pollution monitoring: Physicochemical and biological analysis 2L
3. Environmental impact assessment (EIA) methodology 2L
4. Carbon test plants and carbon sequestration 1L

## BO 1.3 Genetics and Plant Breeding: 3C

### Credit- 1

1. Extensions of Mendelian principles:Codominance, Incomplete dominance, pleiotropy, genomic imprinting, penetrance, expressivity and phenocopy, sex linkage, sex limited and sex influenced characters **3L**
2. Inheritance of complex traits -introduction to complex traits, Polygenic inheritance. Heritability & its measurement **3L**
3. Karyotype analysis:Method, karyotype evolution, applications **1L**
4. Structural alterations of chromosomes:Inversion, translocation, complex translocation heterozygotes, Robertsonian translocations and their genetic implications **3L**
5. Population genetics:Allele frequencies and genotype frequencies, random mating and Hardy-Weinberg principle, Implications of Hardy-Weinberg principle, rate of change in gene frequency through natural selection, mutation, migration and random genetic drift. **5L**

### Credit- 2

1. Microbial genetics: mutant phenotypes, Methods of genetic transfers in bacteria: transformation, conjugation and transduction, mapping of bacterial genome by interrupted mating. **3L**
2. Phage genetics: Phage mutants, Lytic and lysogenic cycles in phages, genetic recombination in phages, mapping the bacteriophage genome, Fine structure analysis of *rII* gene in T4 bacteriophage. **4L**
3. Linkage and mapping in eukaryotes: Linkage and crossing over, Recombination: homologous and non-homologous, Linkage maps, lod score for linkage testing, mapping by 3 point test cross, mapping by tetrad analysis in Yeast and *Neurospora*. **8L**

### Credit- 3

1. Breeding objectives, Plant Genetic resources:Centers of origin, Importance of genetic diversity in crop improvement and its erosion. **2L**
2. Breeding methods in self, cross pollinated and clonally propagated crops:Self pollinated crops: Mass selection, Pureline selection, Pedigree selection, Bulk method, Backcross method **3L**
3. Cross pollinated crops: Mass selection, Progeny selection, Recurrent selection **3L**
4. Clonally propagated crops: Clonal selection, Hybridization **2L**
5. Breeding for heterosis **1L**
6. Mutation breeding:Types, Mutagens: Physical and chemical mutagens, Mutant types, Role of mutation in breeding. **2L**
7. Role of polyploidy in plant breeding **2L**

<b>BO 1.4 - (Practicals based on BO 1.1)</b>	<b>5C</b>
<b>Practicals on Algae: (Any 8 practicals)</b>	
1. Handling of compound microscope and methods to study algae (Use computational facility attached with microscope for observations)	<b>2P</b>
2. Morphological observations, documentation (description and illustrations) and classification with reasons of taxa belonging to:	
a. Chlorophyta	<b>3P</b>
b. Charophyta	<b>1P</b>
c. Phaeophyta	<b>1P</b>
d. Rhodophyta	<b>1P</b>
e. Cyanophyta	<b>1P</b>
f. Minor groups	<b>1P</b>
3. Use of monographs	<b>1P</b>
<b>Practicals on Fungi: (Any 8 practicals)</b>	
1. Study of the representative genera belonging to Myxomycotina, Mastigomycotina, Zygomycotina, Ascomycotina, Basidiomycotina and Deuteromycotina with respect to observations made based on tissue differentiation, accessory organs, asexual and sexual structures, and fruiting body: Ascocarp/Basidiocarp.	
<b>Subdivision Myxomycotina:</b> Any five forms	<b>1P</b>
<b>Subdivision Mastigomycotina:</b> Any five forms	<b>1P</b>
<b>Subdivision Zygomycotina:</b> Any two forms	<b>1P</b>
<b>Subdivision Ascomycotina:</b> Any ten forms	<b>1P</b>
<b>Subdivision Basidiomycotina:</b> Any ten forms	<b>1P</b>
<b>Subdivision Deuteromycotina:</b> Any four forms	<b>1P</b>
<b>Lichen:</b> Any three forms	<b>1P</b>
<b>Preparation of PDA medium and isolation and culture of plant pathogenic fungi</b>	<b>2P</b>
<b>Study the antimicrobial activity against of <i>Trichoderma</i> against fungi.</b>	<b>2P</b>
<b>Practicals on Bryophytes: any 4 practicals</b>	
Morphological, anatomical, and reproductive studies of the following members:	
1. Marchantiales: <i>Astrella</i> , <i>Plagiochasma</i> , <i>Targionia</i> and <i>Cyathodium</i> .	<b>1P</b>
2. Metzgerineae: <i>Fossombronia</i> , <i>Pallavicinia</i>	<b>1P</b>
3. Metzgerineae: <i>Riccardia</i> and <i>Metzaria</i>	<b>1P</b>
4. Jungermannieae: <i>Porella</i> , <i>Frullania</i>	<b>1P</b>
5. Anthocerotales: <i>Folioceros</i> , <i>Phaeoceros</i> , <i>Notothylus</i>	<b>1P</b>
6. Musci: <i>Sphagnum</i> , <i>Polytrichum</i> , <i>Pogonatum</i> , <i>Bryum</i> , <i>Fissidens</i> ( <b>any three</b> )	

## **BO 1.5 Practicals based on BO 1.2 (2C)**

### **Any 8 practicals**

1. Finding minimum size of sampling unit for studying specific plant community **1P**
2. Determination of frequency, density, abundance and IVI of the plant community **1P**
3. Determination of species richness, similarity and diversity indices in different plant Communities **1P**
4. Estimation of DO and free CO<sub>2</sub> **2P**
5. Determination of Palmer's algal index **1P**
6. Study of morphological and anatomical characteristics of plants under pollution stress **2P**
7. Allelopathic analysis of the plants **2P**

**BO 1.6 Practicals based on BO 1.3 (3C) any 12 practicals**

1. Preparation of stains, Fixatives, preservatives and pretreatments to plant material **1P**
2. Karyotype analysis, preparation of somatic C- metaphase chromosomes of appropriate material using camera lucida drawing and Karyotype analysis in Allium/Aloe. **2P**
3. Study of meiotic configuration In maize/ Allium, Rhoe/Aloe, Tradescantia (prophase I, chiasma analysis). **3P**
4. Study of chromosomal aberrations in irradiated plant material **1P**
5. Study of Polygenic inheritance. **1P**
6. Problems of Mendelian inheritance and estimation of gene frequencies and heterozygotic frequencies, population genetics and Linkage. **1P**
7. Neurospora tetrad aanalysis. **1P**
8. Handling of Drosophilla for study of mono, dihybrid, and sex linked inheritance **1P**
9. Linear differentiation of chromosomes through banding techniques such as C-Banding, GBanding and Q-Banding. **2P**
10. Penetrance and expressivity of PTC testing ability in humans and tongue rollers/non rollers **1P**
11. Floral Biology, study of Pollen Viability, germination in vitro and staining of any two major crops. **1P**
12. Study of monohybrid and dihybrid crosses and interactions. **1P**
13. Study of quality traits in rice, cotton/wheat/soybean/Brassica. **1P**
15. Use of Colchicine for induction of polyploidy in appropriate plant material. **1P**

**BO 2.1 Systematics II (Pteridophytes, Gymnosperms)****Credit-3****Credit 1: Pteridophytes**

1. Introduction, diversity and importance of pteridophytes (1L)
2. Recent systems of classification (1L)
3. Telome concept, Soral evolution in Filicales (2L)
4. Gametophyte evolution, Heterospory and seed habit, Stellar evolution (1L)
5. Study of Fossil groups-
6. Psilopsida sailent features of Psilophytes (1L)
7. External and internal morphology of *Rhynia* and Lycopsida sailent features of Lepidodendrales. (1L)
8. External and internal morphology of *Calamites*, *Annularia*, *Calamostactys*. (1L)
9. Pteridosperms sailent features of pteridosperms *Lyginopteris*, *Oldhamia*, *Lagenostoma* (2L)
10. Comparative account of distribution, morphology, anatomy, gametophyte, sporophyte and interrelationship of following orders–
11. Psilotales, Lycopodiales, Isoetales, Equisetales, Ophioglossales, Maratiales, Osmundales (5L)

**Credit 2: Pteridophytes and Gymnosperms**

1. Alternation of generations of Pteridophytes, Apogamy, Apospory (1L)
2. Comparative account of distribution, morphology, anatomy, gametophyte, sporophyte and interrelationship of following orders–Filicales, Marsileaales, Salviniiales (3L)
3. Fossil history, geographical distribution, characteristic features, affinities and distinct features with Pteridophytes and Angiosperms (3L)
4. Classification systems, economic importance of Gymnosperms (2L)
5. Affinities and distinct features of progymnosperms, Pteridospermsles, Cycadeoidales, Cycadales, Caytoniales, Glossopteridales, Pentoxylales, Ginkgoales (4L)
6. Comparative account of morphology, anatomy, sporogenesis, gametogenesis, embryology, and interrelationship Cycadales and Ginkgoales (2L)

**Credit 3**

1. Introduction to Gymnosperms- Characters, diversity, importance and affinity with Angiosperms and Pteridophytes (3L)
2. Comparative account of morphology, anatomy, sporogenesis, gametogenesis, embryology, and interrelationship of Cordiales and Voltziales (1L)
3. Coniferales (4L)
4. Taxales (1L)
5. Gnetales, Ephedrales and Welwitschiales (3L)
6. Seed development in Gymnosperms (2L)
7. Economic importance of Gymnosperms (1L)

## **BO 2.2 Cell Biology (3C)**

### **Credit 1 Cell organelles–functional aspects 15L**

1. Cell wall – biogenesis, ultra structure and function. Growth - primary and Secondary wall **2L**
2. Cell membranes - Molecular organization, Fluid mosaic model, membrane protein diffusion, properties of membranes, transport across membranes - facilitated diffusion, carrier & channel proteins, transporters, active transport, transport of ions and solutes **2L**
3. Plasmodesmata – Structure and role in movement of molecules, virus transport **1L**
4. Vacuoles – Tonoplast membrane biogenesis, transporters, role as storage organelle, transport across vacuolar membrane **1L**
5. Endoplasmic reticulum- Role in synthesis and transport of Secretory proteins **2L**
6. Golgi complex – Role in sorting, storage and secretion, **1L**
7. Lysosomes , Glyoxysomes and Peroxisomes- structure and functions **1L**
8. Cytoskeleton – Composition and organization of microtubules, microfilaments. Treadmilling, role in cell division, signalling and intracellular traffic. **2L**
9. Nucleus – Structure, organization and regulation of nuclear pore complex. Transport across nuclear membrane. **1L**
10. Ribosomes – Structure, assembly and dissociation of subunits, function. **1L**
11. Biogenesis of chloroplasts and mitochondria **1L**

### **Credit 3 Signal transduction 15L**

1. Signal transduction: Types of receptors, G-proteins and G-protein coupled receptors **4L**
2. Phospholipid signalling, Ca<sup>2+</sup>-calmodulin cascade, diversity in protein kinases and phosphatases, secondary messengers, regulation of signalling pathways **5L**
3. Specific signalling mechanisms with suitable examples – biotic and abiotic stress, ABA induced stomatal closure **4L**
4. Nuclear-organelle signaling during plastid development **2L**

### **Credit 4 Cell cycle, aging and cell death 15L**

1. Cell Cycle – Phases of Cell Cycle, functional importance of each phase, Molecular events during cell cycle, Check points, Cyclins and protein kinases, MPF (Maturation Promoting Factor), Regulation of cell cycle. Methods to study cell cycle – labelled mitotic curve, flow cytometry, use of mutants. **10L**
2. Senescence, programmed cell death- molecular aspects, regulation of cell death, PCD in response to stress **2L**
3. Apoptosis- Role of different genes, cell organelles during apoptosis, genetic control of apoptosis. **3L**

**Reference Books:**

**BO 2.3 - Molecular Biology** **4C**

**Credit – 1 DNA**

1. DNA structure – types of base pairing, unusual structures, topology **2L**
2. Melting and reassociation of DNA, Cot curves and kinetic complexity of DNA. Organization of genomes (from whole genome sequences), repetitive and unique sequences, C value paradox, gene duplication and divergence. Number of genes, exons. Rot curves and gene expression **3L**
3. Packaging of genomes in viruses, bacteria, organelles and nuclei. Structure of chromatin, nucleosome positioning. Histone modifications. Chromosome organization, centromeres, telomeres, specialized chromosomes **3L**
4. Initiation, elongation and termination of DNA replication, molecular machinery of DNA replication in prokaryotes and eukaryotes. **3L**
5. DNA damage and repair. **2L**
6. Molecular mechanism of recombination and transposition **2L**

**Credit – 2 RNA**

1. RNA structure – modified bases, pairing, secondary structure **2L**
2. Transcription units, RNA polymerases, initiation, elongation and termination of transcription in prokaryotes and eukaryotes, proof reading **5L**
3. RNA processing – Processing of tRNA, rRNA and mRNA. mRNA localisation **5L**
4. Non-coding RNAs, ribozymes and riboswitches **3L**

**Credit – 3 Proteins**

1. Protein synthesis – tRNA charging, ribosomal organisation. Initiation, elongation and termination of protein synthesis in prokaryotes and eukaryotes. Antibiotics used in inhibition of protein synthesis. Proof reading **5L**
2. Post-translational processing of proteins, protein modifications. Chaperones and protein folding. **3L**
3. Proteases. Ubiquitination and degradation of proteins by proteasomes. **2L**
4. Targeting of organelle and secretory proteins. Localisation of membrane proteins. **3L**
5. Seed-storage proteins and their genes in cereals and legumes. **2L**

**Credit – 4 Regulation of gene expression**

1. Regulation of transcription - Operons, repressors and inducers, positive and negative control, regulation of lytic and lysogenic cycles in phages. **4L**
2. Transcription factors in eukaryotes, response elements. Post-transcriptional regulation. **4L**
3. Regulation of gene expression at higher levels of genome organization, chromatin remodeling, locus control regions, enhancers and insulators **4L**
4. Regulation of protein synthesis, post-translational regulation, regulation of protein function **3L**

**Reference books:**

1. Genes IX– Benjamin Lewin, Jones and Bartlett, 2008
2. Genes X– Benjamin Lewin, Jones and Bartlett, 2011

4. Principles of Biochemistry – Lehninger, W.H. Freeman and Company, 2005

## **BO 2.4 Plant Physiology&Biochemistry (3C)**

<b>Credit 1</b>	<b>15L</b>
1. Structure and properties of water: Biological significance. Ionization of water, pH, buffers	<b>1L</b>
2. Bioenergetics: Free energy, changes in free energy during chemical reactions, entropy and enthalpy, high energy compounds, synthesis of ATP, activation energy	<b>1L</b>
3. Enzymology: Classification and properties of enzymes, Isoenzymes, coenzymes and cofactors, coupled reactions, units of enzyme activity. EnzymekinetiCS–substrate concentration and rate; Competitive and noncompetitive inhibitors. Covalent and allosteric regulation	<b>3L</b>
4. Building blocks of biological macromolecules: Biosynthesis and metabolism of amino acids, carbohydrates, fatty acids and lipids, purine and pyrimidine bases	<b>3L</b>
6. Mineral nutrition of plants: Cation-anion exchange capacity of soil, types of ion transporters, passive and active transport, primary and secondary active transport, Role of membrane potential in ion transport, high and low affinity transporters.	<b>4L</b>
7. Nitrogen: Uptake, assimilation and remobilization of nitrogen in plants, Biological nitrogen fixation by free living and symbiotic organisms, mechanism of nitrogen fixation.	<b>4L</b>
8. Phloem structure and function: Source and sink relationship, translocation of photoassimilates through phloem, phloem loading and unloading, composition of phloem sap.	<b>4L</b>
<b>Credit 2</b>	<b>15L</b>
1. Water uptake, transport and transpiration, Stomatal physiology, mechanism and regulation of guard cell	<b>2L</b>
2. Photosynthesis– Photosynthetic pigments, organization of photosynthetic electron transport system in thylakoid membranes. Charge separation and electron transport, fluorescence and photochemistry, oxygen evolution, NAPD reduction, photophosphorylation.	<b>4L</b>
3. Reduction of carbon dioxide - RuBPCase and Calvin cycle, photorespiration. CO <sub>2</sub> concentrating mechanisms in C <sub>4</sub> and CAM plants.	<b>4L</b>
4. Respiration – Glycolysis, citric acid cycle, pentose phosphate pathway. Organization of mitochondrial electron transport system, ATP synthesis. Respiratory control, Anaerobic respiration	<b>5L</b>
<b>Credit 3</b>	<b>15L</b>
1. Plant growth hormones – Structure, biosynthesis and metabolism of auxins, cytokinins, gibberellins, abscisic acid and ethylene. Physiological role of hormones	<b>8L</b>
2. Photoperiodism and vernalization. Tropic and nastic movements in plants	<b>3L</b>
3. Secondary metabolites: Terpenoids, phenolics, alkaloids. Major secondary metabolite synthesis pathways in plants. Role of secondary metabolites	<b>4L</b>

## **BO 2.5 (Practical's on BO2.1): 2C**

### **Pteridophytes-(Any 4P)**

Morphological and/or anatomical and/or reproductive studies of the following members with the help of live material/or herbarium specimens and/or museum specimens and/or permanent slides of the following orders: (any 8 order 4P)

1. Psilotales: *Psilotum*, *Tmesipteris*
  2. Lycopodiales: *Lycopodium*
  3. Selaginellales: *Selaginella*
  4. Isoetales: *Isoetes*
  5. *Equisetales*: *Equisetum*
  6. Ophioglossales: *Ophioglossum*, *Botrychium*, *Helminthostachys*, *Marattiales*, *Angiopteris*
  7. Osmundales: *Osmunda*
  8. Filicales: *Anemia*, *Lygodium*, *Gleichenia*, *Ceratium*, *Goniopteris*, *Phymotodes*, *Pteris*, *Acrostichum*, *Blechnum*, *Platyserum*, *Pteridium*, *Pleopeltis*, *Cheilanthes*, *Ceratopteris*, *Athyrium*, *Adiantum*.
  9. Salviniales: *Salvinia*, *Azolla*
  10. Marsileales: Marsilea
- Study of available fossil of Pteridophytes (1P)  
Field visit for the study of Pteridophytes biology. (1P)

### **Gymnosperm-(Any 4P)**

1. Double staining technique and permanent slide preparation (1P)
2. Study of available fossils- At least 10 specimen (1P)
3. Morphological and/or anatomical and/or reproductive studies of the following members with the help of live material/or herbarium specimens and/or museum specimens and/or permanent slides of the following orders: (any 4 order 4P)
  - i) Cycadales- *Cycas*, *Zamia*, *Ceratozamia*, *Encephalartos*
  - ii) *Coniferales*
  - iii) *Taxales*
  - iv) *Ginkgoales*
  - v) *Gnetales*
4. Field visit for the study of Gymnosperms biology. (1P)
5. Methods of turpentine and oleo resin extraction from the pine tree (Demonstration with the help of samples) (1P)

**BO 2.6 practicals based on BO 2.2 & BO 2.3** **4C**

**Cell Biology (Any 8P)**

1. Differential centrifugation for isolation of cell fractions – Nuclear fraction **1P**
2. Isolation of chloroplasts to study: **2P**
  - a. Hill reaction to measure intactness,
  - b. measurement of size of chloroplasts using micrometry and chlorophyll estimation
3. Isolation of mitochondria and **2P**
  - a. Estimation of succinic dehydrogenase activity
  - b. Microscopic observations using MitoTracker Green FM/ MitoTracker Red 580/ Janus green B
4. Isolation of lysosomal fraction and estimation of acid phosphatase activity **1P**
5. Study of electron micrographs of cell organelles **1P**
6. Study of cell cycle using BrdU (demonstration) **1P**
7. Isolation of protoplasts and viability staining to determine % viability. **1P**
8. Study of metaphase nucleus: Localization of euchromatin and heterochromatin **1P**
9. Cytochemical studies of special cell types- guard cells, senescent cells, bundle sheath cells, meristematic cells, laticiferous cells, glandular cells, pollen grains **2P**
10. Study of induced cell senescence in leaf discs **1P**
11. Study of programmed cell death in plants **1P**
12. Ouchterlony immunodiffusion technique for testing specificity of antigens and antibodies **1P**
13. To study plasmodesmatal connections in plant cells **1P**
14. Determination of permeability of living cells to acids and bases **1P**

**Molecular Biology (Any 8P)**

1. Isolation of plasmid DNA and quantification **2P**
2. Electrophoretic separation of plasmid isoforms **1P**
3. Restriction digestion of plasmid DNA, electrophoresis and molecular weight determination of DNA fragments. **2P**
4. Isolation of plant genomic DNA and quantification **2P**
5. Effect of temperature and alkali on absorbance of DNA – hyperchromicity **1P**
6. Separation of seed-storage proteins from leguminous seed and quantitation of each fraction **2P**
7. SDS-PAGE separation of seed storage proteins from legumes. Determination of molecular sizes of the globulin subunits. **3P**

## **BO 2.7 Practicals based on BO 2.4 (2C)**

### **Any 08 Practicals**

1. Estimation of soluble proteins in germinating and non-germinating seeds by Lowry/Bradford's method **2P**
2. Estimation of total amino acids in germinating and non-germinating seeds **1P**
3. Estimation of ascorbic acid in ripe and unripe fruits **1P**
4. Bioassay of Cytokinin concentration using test system of greening of cotyledons **2P**
5. Studies on induction of amylase activity by GA<sub>3</sub> in germinating cereal grains **2P**
6. Measurement of respiration and photosynthetic rates using oxygen electrode (demonstration) **1P**
7. Measurement of CO<sub>2</sub> uptake using IRGA (Demonstration) **1P**
8. Assay of Nitrate reductase activity **2P**
9. Assay of PEPcase activity in a C<sub>3</sub> and C<sub>4</sub> plants **2P**
10. Assay of invertase activity **1P**
11. Effect of substrate concentration and pH on enzyme activity. **2P**
12. Separation and measurement of flavonoids using chromatography **2P**
13. Separation and measurement of Anthocyanins from flowers of different stage of maturation. **1P**

## **BO 3.1 - Taxonomy of Angiosperms**

### **Credit -1 15L**

1. Aims, principles and practices in taxonomy. Botanical Nomenclature: Brief history, Scientific names, ICN, Principles, typification, Principle of priority, effective and valid publication, rank of taxa. **4L**
2. Tools of taxonomy: Floras, monographs, revisions, websites. Herbarium and botanical gardens, their role in teaching, research and conservation, important herbaria and botanic gardens of the World. Botanical Survey of India. **3L**
3. Floristics: Need and significance. History of botanical exploration in India and recent works with special emphasis on Maharashtra. Botanical Survey of India. **3L**
4. Morphological features used in identification. Artificial dichotomous keys **3L**
5. Biodiversity, types, importance and methods of conservation **2L**

### **Credit -2 15L**

1. Importance and need for classification, hierarchical classification. Criteria used for classification; phases of plant classification. Overview on pre- and post-Darwinian systems of classification. **2L**
2. Artificial systems of classification - Herbalists, Theophrastus, Linnaeus **2L**
3. Natural system of classification - Bentham and Hooker **2L**
4. Phylogenetic systems of classification - Cronquist, Takhtajan **4L**
5. APG system of classification, contributors, APweb **5L**

**Credit -3****15L**

1. Origin and evolution of agriculture: Introduction, food crops, centres of plant domestication of major crops, crop dispersal and distribution. **5L**

2. Plant domestication: Introduction, Evolution of farming, Plant domestication, origin of crops, changes during domestication, genetic regulation of domestication syndromes, evolution of weeds, genetic diversity and domestication. Centers and threats to diversity. **5L**

3. Crop plants and their wild relatives: Cereal grains, legumes, starch plants, fruits, vegetables, fibers, cordage, medicinal plants, poisonous plants. **5L**

**Credit -4****15L**

1. Major clades in APG-IV: characteristic features, interrelationships, classification (APG-IV) and economic importance of families of angiosperms in following clades: ANAGRADE: Amborellaceae, Nymphaeaceae, Hydatellaceae; MAGNOLIIDS: Magnoliaceae; MONOCOTS: Araceae; COMMELINOIDS: Arecaceae; PROBABLE SISTER OF EUDICOTS: Ceratophyllaceae; EUDICOTS: Ranunculaceae; CORE EUDICOTS: Amaranthaceae; EUROSIDS-I: Leguminosae; EUROSID-II: Malvaceae; ASTERIDS: Santalaceae; EUASTERIDS-I: Apocynaceae, EUASTERID-II: Asteraceae.

**Practicals on BO 3.1 – Taxonomy of Angiosperms****2C - 8P**

1. Studies on the following Classes as per Bentham and Hooker's system of classification using any 3 typespecimens and preparation of artificial keys for identification of any two unknownspecimen: **6P**

**Dicotyledonae**

- a. Polypetalae:Thalamiflorae, Disciflorae, Calyciflorae
- b. Gamopetalae:Inferae, Heteromerae, bicarpellatae
- c. Monochlamydae:Curvembryae, Multiovulateaquaticae, Multiovulateterrestris, Microembryae, Daphniales, Achlamydosporae, Unisexuales, Ordinesanomali.

**Monocotyledonae**

- a. Microspermae                      b. Epigynae                      c. Coronariae                      d. Calycinae
- e. Nudiflorae                          f. Apocarrae                      g. Glumaceae

2. Comparative study of morphological and structural adaptations of hydrophytes, mesophytes, xerophytes, halophytes **1P**

3. Ex-situ conservation methods of biodiversity – through seed, vegetative and micro-propagation methods. ( any one plant species per technique) **2P**

## **BO 3.2 – Plant Development (3C)**

### **Credit 1 – Vegetative development** **15L**

1. Processes basic to plant development **2L**
  - a. Competence, determination, commitment, specification, induction, differentiation, dedifferentiation and redifferentiation.
  - b. Morphogenetic gradients, cell fate and cell lineages.
  - c. Polarity and symmetry.
  - d. Juvenility and transition to adult phase.
2. Vegetative development –
  - a. Meristem types and activities of meristems. Organization of shoot and root apical meristems. Regulation of meristem size, lateral organ initiation from root and shoot meristems. **2L**
  - b. Leaf development, plastochron, phyllotaxy, development of trichomes and stomata. **2L**
  - c. Vascular elements – differentiation of xylem, phloem. **1L**
  - d. Secondary growth – cambium, gross structure of wood. **1L**
  - e. Secretory tissues – Nectaries, laticifers, resin ducts. **1L**
  - f. Molecular genetics of root, shoot and leaf development. **5L**
  - g. Transition from vegetative to reproductive phase – induction, morphological and histochemical changes in shoot apex, floral meristems. **1L**

### **Credit 2 – Reproductive development** **15L**

1. Transition to flowering and flower development: Molecular Basis-ABC & ABCE Model. **3L**
2. Development of stamen, anther, sporogenous tissue, tapetum, microsporogenesis, types of pollen tetrads, pollen and male gametophyte. **2L**
3. Development of carpel, placenta, ovule, integuments, sporogenous tissue, megaspore, female gametophyte. **2L**
4. Molecular basis of male and female gametophyte development. **2L**
5. Interaction between pollen & pistil, pollen tube guidance, self-incompatibility, double fertilization and triple fusion, role of synergids, endosperm development and imprinting. **3L**
6. Fruit development, structure of seed, germination, and germination mutants. **1L**
7. Stages of embryogenesis, structure and organization of embryo, suspensor, Embryogenesis mutants, establishment of body plan. **2L**

### **Credit 3 - Intrinsic and extrinsic factors regulating plant development** **15L**

1. Light mediated regulation
  - a. Photoreceptors- phytochromes, cryptochromes, phototropins. **2L**
  - b. Signal transduction leading to photomorphogenesis and photoperiodic responses. **3L**
  - c. Circadian rhythms **2L**
2. Hormonal regulation
  - a. Perception, signaling and regulation of gene expression by hormones – Hormone receptors, mutants in hormone signaling, transcription factors involved in hormone signalling. **4L**
  - b. Role of hormones in germination, growth and flowering. Cross-talk between hormone signaling pathways **3L**
3. Regulation of development by metabolites (sugars, nitrogen status) **1L**

## **BO 3.5e Plant Physiology (3C) Special paper-I**

### **Credit 1: Water relations, mineral nutrition and crop physiology15L**

1. Forces involved in water uptake and transpiration, stomatal physiology, hydraulic conductance, regulation of Aquaporins. **2L**
2. Energising transporters, role of ATPases and PPases, role of chelators in mineral uptake and transport. Low and high affinity transporters. Mechanism of uptake and transport of Potassium, Calcium, Magnesium, Iron, Zinc, Copper, Sulphur. Hydroponic media and applications. **5L**
3. Evolution of biological nitrogen fixation, regulation of nitrogen fixation. **2L**
4. Crop growth - Relative growth rate, Leaf area index and net assimilation rate **2L**
5. Allocation of resources to storage organs, fruits and seeds (endosperm, cotyledons) Source – sink relations. Harvest Index **2L**
6. Factors affecting phenology and yield **1L**
7. Water use efficiency and nitrogen use efficiency of crop plants. **1L**

### **Credit 2: Photosynthesis15L**

1. Chlorophyll fluorescence kinetics and determination of PSI, PSII efficiency. Photosynthesis measurements. Light saturation curves, CO<sub>2</sub> response curves and CO<sub>2</sub> compensation point. Canopy photosynthesis, Carbon sequestration by plants **4L**
2. Photoinhibition and protection mechanisms. Water-water cycle, photorespiration **3L**
3. Evolution and diversity of photosynthetic systems. Bacterial photosynthesis, Algal photosynthesis **3L**
4. Regulation of photosynthesis in response to changing climate conditions. **2L**
5. Partitioning of photosynthetic assimilates, long distance transport, phloem loading and unloading and its regulation, feedback regulation of photosynthesis. **3L**

### **Credit 3: Respiration, Growth and Photophysiology15L**

1. Comparative account of energy release efficiency of Glycolysis, TCA cycle and PPP. Alternative pathways in plants, alternate oxidase, regulation of different pathways, GABA shunt **3L**
3. Mitochondrial electron transport system, inhibitors and uncouplers, Diverse electron transport systems in plant mitochondria, Oxidative phosphorylation, respiratory control and measurements **4L**
4. Interdependence of mitochondria and chloroplasts. Protective effects of mitochondrial respiration on photosynthesis **3L**
5. Growth and maintenance respiration. Role of respiration in plant carbon balance **2L**
6. Seed germination and dormancy, Measurement of growth, **2L**
8. Photophysiology of Blue light responses **1L**

## BO 3.5 F – Pharmacognosy – I - 3C – Modified Tentative Syllabus

### Credit I: Evaluation of Drugs, Processing and Marketing 15L

- a. Evaluation of Drugs: Concept, considerations, parameters and methods of quality control for medicinal plant materials as per various pharmacopoeia and other guidelines. } 3L
- b. Preparation of monograph of crude drug.
- c. Comparative study of IP, European Pharmacopoeia, BP / Ayurvedic Pharmacopoeia of India. 2L
- d. Pharmacognostic studies of some drugs: w.r.t. geographical distribution, cultivation, **post harvest technology**, collection, macroscopic and microscopic characters, commercial products if any, chemical constituents, chemical tests, therapeutic uses, commercial varieties, adulterants and substitutes. 7L
- Root Drugs: *Aconitum napellus* Linn., *Gentiana lutea* Linn., *Withania somnifera* (L.) Dunal
- Rhizome Drugs: *Rauwolfia serpentina* Benth., *Acorus calamus* Linn.
- Stem Drugs: *Ephedra* sp., *Quassia amara* Linn.
- Bark Drugs: *Cinchona* sp., *Saraca asoka* (Roxb.) De Wild.
- Leaf Drugs: *Ocimum sanctum* Linn., *Adhatoda vasica* Nees., Senna
- Flower Drugs: *Woodfordia floribunda* Salisb., *Eugenia caryophyllata* Thumb.
- Fruit Drug: *Tamarindus indica* Linn., *Corriandrum sativum* Linn.
- Seed Drugs: *Strychnos nux-vomica* Linn., *Plantago ovata* Forskal)
- e. Herbal fingerprint profile of single and multi-component herbal drugs. }
- f. Stability testing of natural products. Examples of use of these techniques for plant products. } 3L

### Credit II: Natural Products Chemistry 15L

- a. Major secondary metabolism pathways in plants. 2L
- b. Brief outline of occurrence, distribution and synthesis of phenolics, alkaloids, terpenoids, coumarins, flavonoids, glycosides, volatile oils, tannins and resins. 6L
- c. Methods of extraction, isolation, purification, identification and estimation of above types of metabolites. Case studies 5L
- d. Regulation of secondary metabolite pathways and compartmentation of these in plants. } 2L
- e. High Throughput Screening (HTS).

### Credit III: Applied Pharmacognosy 15L

- a. Ethnobotany: Concept, relevance and classification. Methods and techniques used in ethnobotany. Ethnopharmacology and its applications. 3L
- b. Regulatory requirements for new drugs: Markers constituents- Definition, importance in crude drug standardization. Examples of Biomarkers. 4L

- c. Standardization, quality, efficacy and safety requirements & assessment procedures for herbal medicines as per USFDA. **3L**
- d. Nutraceuticals and Cosmeceuticals: General introduction, Classification and their formulations, Botanical sources, properties and uses. **3L**

## **BO 3.5G: Advanced Plant Genetics and Breeding**

### **Credit 1: Cytogenetics**

1. Chromosome markers, banding, genetic maps, cytogenetic maps and physical maps, GISH and FISH analysis. **3L**
2. Aneuploids (Nullisomics, monosomics, trisomics, tetrasomics). Mapping methods with aneuploids, alien addition / substitution lines. **2L**
3. Apomixis: Genetics of apomictic systems & its application. **2L**
4. Distant hybridization in plant breeding: Barriers for the production of distant hybrids, Technique, sterility in distant hybrids and its application in crop improvements. **2L**
5. Heterosis and its exploitation: Concept of heterosis, inbreeding depression. Estimation of heterosis, **2L**
6. Hybrid varieties: Development and evaluation of inbreeds, production of hybrid seeds, merits, demerits and achievements through hybrid varieties. **4L**

### **Credit 2: Breeding for Quality traits**

1. Breeding for resistance to Abiotic stresses – Drought stresses, Salinity, mineral deficiency and mineral toxicity, Heat and cold resistance **4L**
2. Biotic stresses – Disease resistance, Insect resistance **2L**
3. Breeding for quality improvement - Protein and oil through conventional and biotechnological approach. **3L**
4. Use of haploids, euploids, aneuploids, auto and allopolyploids in breeding, synthesis of new crop species. **3L**
5. Role of induced mutations in plant breeding. **2L**
6. Application of field designs for setting hybridization experiments **1L**

### **Credit 3: Molecular markers and its applications**

1. Molecular markers: Different types of molecular markers, Diversity assessment using molecular markers, Genome analysis, Gene Mapping with molecular markers, Map based cloning, QTL identification and mapping. **8L**
2. Marker assisted selection (MAS): Mapping populations, MAS in Gene pyramiding and backcross breeding. **3L**
3. Use of MAS for QTL identification and disease resistance. **4L**

## **BO 4.2d Plant Ecology Special paper-II (3C)**

<b>Credit 1 Communication in plants and microbes</b>	<b>15L</b>
1. Plant-plant communication: Rhizosphere signalling	<b>3L</b>
2. Nitrogen fixing microbes and legumes interaction	<b>2L</b>
3. Tri-trophic interaction: Plant volatiles and their ecology, indirect defense, Pollinator attractants	<b>3L</b>
4. Growth-defense tradeoffs	<b>3L</b>
5. Analysis of plant communities through qualitative and quantitative characters Quadrat and transect and remote sensing methods, Statistical tools and softwares	<b>4L</b>
<b>Credit 2 Bioremediation mechanisms</b>	<b>15L</b>
1. Decontamination practices: chemical, physical and biological	<b>3L</b>
2. Microbial systems: Aerobic and anaerobic degradation of the wastes	<b>3L</b>
3. Solid waste management practices, composting and biogas production	<b>3L</b>
4. Mechanisms of phytoremediation: Phytoextraction, Phytostabilization, Phytoaccumulation and Phytovolatilization	<b>3L</b>
5. Heavy metal stress and its management	<b>3L</b>
<b>Credit 3: Sustainable Development</b>	<b>15L</b>
1. Environmental policies; International, national and local	<b>3L</b>
2. Sustainable agricultural practices: Use of bio fertilizers and biopesticides, Concept of organic farming	<b>3L</b>
3. Sustainability of wetlands	<b>3L</b>
4. Management of water resources for irrigation and drinking	<b>3L</b>
5. Urban planning and sustainable cities	<b>3L</b>

**BO 4.2e Plant Physiology Special paper–II** (4C)

**Credit 1** *In vitro* culture and genetic transformation of plants 15L

1. *In vitro* responses of plant cells, tissue and organs- effect of nutrient medium constituents, growth regulators and environmental factors. 3L
2. Physiological and genetic basis of somaclonal variation and their applications 1L
3. Protoplast culture, somatic hybridization and cybridization, production of haploids 2L
4. Secondary metabolite production in cultured plant cells and tissues 2L
5. Genetic transformation of plants - transfer of foreign DNA into host plant tissues using Agrobacterium based vectors, mechanism of integration of DNA into plant genomes. 3L
6. Factors affecting transformation, Screening and analysis of transformants. 2L
7. Direct DNA transfer to plants – Electroporation, biolistic transfer 2L

**Credit 2** Responses of plants to drought, Temperature and salinity stress 15L

1. Drought stress – effects on growth and metabolism in plants. Acclimation responses to drought stress at physiological and molecular level, stress signalling. Adaptive responses to drought stress, drought escape, tolerance. 4L
2. Salinity stress – osmotic and ionic effects on growth and metabolism. Mechanisms for removal of sodium from cells - SOS pathway, NHX transporters. Improvement of salinity tolerance in plants 4L
3. Stress due to extreme temperatures – effects on growth and metabolism. Adaptive responses of plants to low and high temperature stress 2L
4. Hormone signalling, Types of hormone receptors, signalling and gene expression with auxin, cytokinin, gibberellic acid, polyamines, ethylene, abscisic acid, brassinosteroid. 5L

**Credit 3.** Chemical signalling in plant interactions 15L

1. Symbiotic interactions of plants with rhizobia and mycorrhiza. Signalling mechanisms leading to successful symbiosis. Nitrogen and phosphorus availability. 4L
2. Chemical signalling during interactions of plants and pathogens, physiological interactions leading to expression of resistance or susceptibility. 4L
3. Chemical signalling in plant interactions of plants and herbivores, pollinators 4L
4. Allelopathy, mechanism of action of allelochemicals in allelopathy. 3L

## **BO 4.2 G: Advanced Plant Genetics and Breeding-II**

### **Credit 1: Molecular methods and Sequencing strategies for genome analysis**

1. Dividing the genome - fragmentations with restriction enzymes, separation of large DNA fragments, isolation of chromosomes by Cell sorting Chromosomal micro dissection - vectors for cloning DNA - Yeast artificial chromosomes (YAC), P1 derived and bacterial artificial chromosomes (BAC), choice of vectors. (5)
2. Strategies for genome mapping - restriction enzyme fingerprinting, Marker sequences - sequence tag sites (STS) and sequence tag connectors, expressed sequence tags, simple sequence length polymorphism and single nucleotide polymorphism, hybridization and PCR based other polymorphic markers, their characterization and generation. (5)
3. Basic DNA sequencing, principles of automated DNA sequencing.  
High throughput screening, Sequencing strategies - sequencing short stages, sequence of genes, genome sequencing, closing sequence gaps and completing sequence assembly.  
Sequencing by hybridization and development of microarray and variations in it. (5)

### **Credit 2: Functional Genomics**

1. Introduction to Functional Genomics, Relationship of Genotype and Phenotype, Functional Genomics Using Reverse Genetics and Forward Genetics (1)
2. Approaches to expression profiling: Northern hybridization, DDRT-PCR, cDNA-AFLP, SSH, SAGE, Microarray, NGS. (7)
3. Reverse Genetic Tools for Investigating Gene Function: Gene Silencing by RNA interference (RNAi), VIGS (2)
4. Insertional mutagenesis: T-DNA and transposon mediated mutagenesis, TILLING (3)
5. Genome editing for targeted improvement of plants: Engineered meganucleases (EMNs), zinc finger nucleases (ZFNs), transcription activator-like effector nuclease (TALENs) and CRISPR/Cas9 (2)

### **Credit 3: Gene transfer and genetically modified plants**

1. Gene transfer approaches: Direct DNA transfer methods and Agrobacterium-mediated transformation: Ti Plasmid and mechanism of T-DNA transfer and integration into plant genome. (3)
2. Agrobacterium based vectors: Binary vectors, super-binary vectors, Gateway vectors for function analysis. (3)
3. Development of transgenic crop plants for biotic and abiotic stress tolerance (salinity & drought), improvement of nutrition quality. (5)
4. Regulations regarding GMOs– Potential problems with GMOs, efforts to prevent these problems, gene containment, safer selectable markers and strategies to remove antibiotic resistance markers from transformed plants. Regulatory bodies in government (4)
