

**Savitribai Phule Pune University (Formerly
University of Pune)**

**Four Year Degree Program
B.Sc.(Computer Science)**

With

Major: Computer Science

(Faculty of Science and Technology)

**Syllabi for
T.Y.B.Sc. (Computer Science)**

(For Colleges Affiliated to Savitribai Phule Pune University)

Choice Based Credit System (CBCS) Syllabus Under
National Education Policy (NEP)

To be implemented from Academic Year 2026-2027

Title of the Course: B.Sc. (Computer Science)

Preamble:

The B. Sc. (Computer Science) and B. Sc. (Computer Science) (Honors) and (Research) course is a systematically designed program with Computer Science as a major subject under the faculty of Science and Technology. The objective of the course is to prepare students to undertake careers involving problem solving using computer science and technologies, or to pursue advanced studies and research in computer science. The syllabus which comprises of Computer Science (Major) subject along with that of the three allied subjects (Mathematics, Electronics and Statistics) (Minor) covers the foundational aspects of computing sciences and also develops the requisite professional skills and problem solving abilities using computing sciences.

Introduction:

At the first year of under-graduation, the basic foundations of two important skills required for software development are laid. A course in problem solving and programming along with a course in database fundamentals forms the preliminary skill set for solving computational problems. The practical courses are designed to supplement the theoretical training in the year. Along with Computer Science (Major), VSC and SEC courses help in building a strong technical foundation. Another aspect of this course is IKS which tells about the rich heritage and advancement of India in the field of computation.

In the second year of under-graduation, computational problem solving skills are further strengthened by a course in Data structures, C++ and python programming. Software engineering concepts that are required for project design are also introduced. Essential concepts of computer networking are also introduced this year. The practical course included in both semesters complements the theory courses. Field projects/ OJT are introduced so that students can implement the concept they have learnt in first year.

In Second Year, the "Subject 1: Computer Science" will be the Major Subject and the Minor subject will be chosen from "Subject 2 or Subject 3". Subject 2 and Subject 3 will not be available as Major Subjects in Second Year and Third Year

At the third year of under-graduation, all the subjects are designed to fulfill core Computer Science requirements as well as meet the needs of the software industry. Theory courses are adequately supplemented by hands-on practical courses. Major elective courses are taking care of recent advancement in the field of computer science. Minor and Skill Enhancement courses enable the students to acquire additional skills.

At the fourth year (honors) and (research) of under-graduation, all the subjects are designed to fulfill core Computer Science requirements as well as meet the needs of the software industry. Practical courses and field projects enable students to get hands-on training. Various learning tracks are open through Major elective courses. Research methodology course will create interest among the students to carry research in the field of computer science.

Objectives:

- To develop problem solving abilities using a computer.
- To build the necessary skill set and analytical abilities for developing computer based solutions for real life problems.
- To train students in professional skills related to the Software Industry.
- To prepare the necessary knowledge base for research and development in Computer Science.
- To help student's build-up a successful career in Computer Science and to produce entrepreneurs who can innovate and develop software products.

Eligibility

- a) H.S.C. (10 + 2) Science stream with Mathematics.
- b) Three years diploma course after S.S.C. (10th std.) of Board of Technical Education conducted by Government of Maharashtra or its equivalent.

Programme Out comes:

PO No.	Outcomes
PO1	Develop creative skills, critical thinking, analytical skills and research to address the real world problems using computational skills
PO2	Understand and apply mathematical foundation, computing and domain knowledge and develop computing models for defined problems
PO3	Understand software project management and computing principles with computing knowledge to manage projects in multidisciplinary environments
PO4	Illustrate the concepts of systems fundamentals, including architectures and organization, operating systems, networking and communication
PO5	Understand and apply the concepts of Digital Electronics, Computer Architecture, IoT etc.
PO6	Recognize the need for and develop the ability to engage in continuous learning as a Computing professional
PO7	Apply modern computing tools, skills and techniques necessary for innovative software solutions
PO8	Communicate effectively with the computing community as well as society by being able to comprehend effective documentations and presentations
PO9	Gain Self Discipline and commit Professional Ethics in global economic environment
PO10	Individual & Team Work: Ability to work as a member or leader in diverse teams in multidisciplinary environment
PO11	Identify opportunities, entrepreneurship vision and use innovative ideas to create value and wealth for the betterment of the individual and society

Savitribai Phule Pune University

Structure of UG Program as per NEP-2020

Name of Program :- B.Sc. (Computer Science)**Major Course: - Computer Science****Level:- 4.5 (First Year)****Sem:-I**

Course Type	Course Code	Course Title	Credits		Teaching Scheme Hr/Week		Evaluation Scheme and Max Marks		
			TH	PR	TH	PR	CE	EE	Total

SEM-V

Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - SEM- V Course Type: Major Course Code: CS-301-MJ-T Course Title : Core Java		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
Prerequisites <ul style="list-style-type: none"> ● Knowledge of C Programming language 		
Course Objectives <ul style="list-style-type: none"> ● To learn Object Oriented Programming language ● To study various java programming concepts like Interface, File and Exception Handling etc. ● To design User Interface using Swing 		
Course Outcomes On completion of the course, student will be able to– CO1: Learn the data types, variables, operators, control statements and loops. CO2: Understand the concept of classes, objects, packages. CO3: Learn and implement the concept of Inheritance and Interface. CO4: Understand File and Exception Handling. CO5: Implement application using the abstract classes and adapter classes. CO6: Develop GUI based applications.		
Course Contents		
Chapter 1	An Introduction to Java	5 Hours
1.1 Object Oriented Programming Concepts 1.2 Introduction to Java 1.3 Features of Java 1.4 Java Environment: 1.4.1 Structure of Java Program 1.5 Java Development Tools 1.6 Basic concepts in Java- 1.6.1 Comments, Data Types 1.6.2 Tokens 1.6.3 Variable 1.7 Control Flow Statements 1.8 Arrays in Java		

1.9 Accepting Input (Command Line Arguments, BufferedReader, DataInputStream, Scanner)		
Chapter 2	Objects and Classes	6 Hours
<p>2.1 Defining your own classes</p> <p>2.2 Access Specifiers: public, protected, private, default</p> <p>2.3 Array of Objects</p> <p>2.4 Constructors, Overloading Constructors</p> <p>2.5 Use of 'this' keyword static block, static fields and methods</p> <p>2.6 Predefined Classes</p> <p> 2.6.1 Object Class, Methods (equals(), toString(), hashCode(), getClass())</p> <p> 2.6.2 String Class And StringBuffer Class, Formatting String data using format() method</p> <p>2.7 Creating , Accessing And Using Packages</p> <p>2.8 Wrapper Classes</p>		
Chapter 3	Inheritance and Interface	6 Hours
<p>3.1 Inheritance Basics (extends Keyword) and Types of Inheritance</p> <p>3.2 Superclass, Subclass and use of Super Keyword</p> <p>3.3 Method Overriding and runtime polymorphism</p> <p>3.4 Use of final keyword related to method and class</p> <p>3.5 Use of abstract class and abstract methods</p> <p>3.6 Defining and Implementing Interfaces</p> <p>3.7 Runtime polymorphism using interface</p> <p>3.8 Functional Interface and Marker Interface</p> <p>3.8 Adapters and Anonymous Inner Class</p>		
Chapter 4	Exception and File Handling	5 Hours
<p>4.1 Dealing with errors</p> <p>4.2 Exception class</p> <p> 4.2.1 Checked and Unchecked Exception</p> <p> 4.2.2 Logger Class</p> <p> 4.2.3 Catching Exceptions,</p> <p> 4.2.4 Multiple Catch Block</p> <p> 4.2.5 Nested try block</p> <p> 4.2.6 Creating User Defined Exception</p> <p>4.3 Introduction to Files and Streams</p> <p> 4.3.1 Input-OutputStream : FileInputStream/OutputStream, BufferedInput/OutputStream,</p> <p> 4.3.2 DataInput/OutputStream</p> <p> 4.3.2.1 Reader-Writer : FileReader/Writer, BufferedReader/Writer,</p>		

4.3.2.2 InputStreamReader, OutputStreamWriter		
Chapter 5	User Interface with JavaFX	8 Hours
<p>5.1 What is JavaFX?</p> <p>5.2 Architecture of JavaFX</p> <p>5.3 LifeCycle of a JavaFX Application</p> <p>5.4 Common JavaFX Layouts</p> <p> 5.4.1 HBox, VBox, BorderPane, GridPane, FlowPane, StackPane</p> <p>5.5 Containers and Components</p> <p> 5.5.1 Button, Label, Text, TextArea, CheckBox And RadioButton, List, ComboBox, Menu And related Classes</p> <p>5.6 JavaFX Charts</p> <p> 5.6.1 Pie Chart, Line Chart, Area Chart, Bar Chart</p> <p>5.7 Event Handling: Adding and Removing Event Handlers</p>

Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - SEM– V		
Course Type: Major	Course Code: CS-302-MJ-T	
Course Title : Operating Systems		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
Prerequisites Data structures like stack, queue, linked list, tree, graph, hashing, file structures, any structured programming language		
Course Objectives <ul style="list-style-type: none"> • The course provides concepts that underlie the operating systems • Understanding Modern Operating System and their principles. • Introduction to the process scheduling, CPU scheduling algorithms, memory management, Deadlock handling , file system and Disk Management as well as disk scheduling algorithms 		
Course Outcomes Upon the successful completion of the course students will be able to CO1: Understand concepts of Operating System, its structure and services provided by OS. CO2: Understand the mechanisms of context switching, Scheduling etc. CO2: Analyze the efficiency and performance of algorithms related to CPU scheduling. CO3: Analyze the efficiency of paging, segmentation, virtual memory for efficient memory Utilization. CO4: Understand the techniques of deadlock handling. CO5: Implement Scheduling algorithms, memory management techniques and disk scheduling techniques. CO6: Understand and evaluate disk organization and management		
Course Contents		
Chapter 1	Introduction to Operating System	3Hours
1.1 Basic concepts-Definition, operating system functions and services, need or purpose of operating system. 1.2 Operating system Structure. 1.3. Types of Operating System. 1.4 Operating system operation 1.5 Booting process of Operating system 1.6 Advantage and disadvantages of operating System.		
Chapter 2	Process and Process Scheduling	7 Hours
2.1 Basic Concepts: Process, Process states, Process Control Block, Operations on Process 2.2 Process Scheduling- Scheduling, Scheduling queues, CPU Schedulers and its type, context switching, CPU and I/O Burst Cycle, Scheduling Criteria, types of scheduling. 2.3 Scheduling Algorithms: First Come First Serve(FCFS),Shortest Job First(SJFs), Priority Scheduling , Round Robin (RR)		
Chapter 3	Memory Management	8 Hours
3.1 Introduction to memory management, address binding, Logical versus physical address space, Role and functions of Memory Management Unit (MMU) 3.2 Paging concepts-paging model, page table structure and working of paging. 3.3 Segmentation concepts–Segmentation, Hardware, Paging VS Segmentation		

<p>3.4 Virtual Memory Management-Concept, Demand paging, Performance of demand paging</p> <p>3.5 Page replacement algorithms – FIFO, Optimal, LRU, MFU.</p>		
Chapter 4	Deadlock	7 Hours
<p>4.1 Basic Concepts-Deadlock definition, process synchronization, resource allocation graph and Necessary condition.</p> <p>4.2 Deadlock handling Methods- Deadlock Prevention, Deadlock Avoidance (Safe state, Banker's Algorithm), Deadlock Detection</p> <p>4.3 Recovery from Deadlock – Process termination, Resource preemption.</p>		
Chapter 5	File System Management and Disk Scheduling	5 Hours
<p>5.1 Basic Concepts: File, File attributes, File operations.</p> <p>5.2 Allocation Methods – Contiguous allocation, Linked allocation, Indexed allocation</p> <p>5.3 Free Space Management and Disk Structure–Free space management techniques: Bit vector, linked list, Grouping, Counting.</p> <p>5.4 Disk structure</p> <p>5.5 Disk Scheduling algorithms- FCFS Scheduling, SSTF Scheduling, Scan scheduling, and look scheduling.</p> <p>5.6</p>		
Reference Books:

William Stallings,</p> <p>R3: Advanced Concepts in Operating Systems, Tata McGraw Hill Inc, 2001 (Text Book) M Singhal and NG Shivaratri</p>		

<p style="text-align: center;">Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – V</p>		
Course Type: Major		Course Code: CS-303-MJ-T
Course Title: Web Technology-I		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> ● Knowledge of Programming Fundamentals ● Basic knowledge of Computer Fundamentals ● Familiarity with basic web browser and web Applications 		
<p>Course Objectives</p> <ul style="list-style-type: none"> ● Introduction to scripting languages. ● Development of interactive and dynamic client-side applications. ● To analyze asynchronous programming concepts and execution model for backend development. ● To design and implement basic server-side applications and file handling systems. 		
<p>Course Outcomes</p> <p>On completion of the course, student will be able to–</p> <p>CO1: Understand the structure and functionality of HTML5 elements, CSS3 styling techniques and core JavaScript concepts used in frontend development.</p> <p>CO2: Develop responsive and interactive web pages using HTML5, CSS3 and modern JavaScript (ES6+) features.</p> <p>CO3: Analyze asynchronous programming concepts and Node.js execution model for handling server-side operations efficiently.</p> <p>CO4: Design and implement basic backend applications including HTTP server creation and file handling using Node.js modules.</p>		
Course Contents		
Chapter 1	Frontend Fundamentals (HTML, CSS, Core JavaScript)	9 Hours
<p>1.1 HTML5 Fundamentals</p> <p>1.1.1 Structure of HTML5 document (<!DOCTYPE>, <html>, <head>, <body>)</p> <p>1.1.2 Semantic elements (header, nav, section, article, footer, aside)- Forms and input controls-Input types, labels, validation attributes, Form submission methods (GET/POST)</p> <p>1.1.3 Multimedia elements – Audio, video, iframe embedding, Accessibility considerations (alt text, captions)</p>		

	<p>1.2 CSS3 Styling & Layout- Selectors, specificity, pseudo-classes, pseudo-elements, Box model, margin, padding, border, overflow, Layout techniques -Flexbox alignment and distribution, CSS Grid rows, columns, areas, Responsive design, Media queries, mobile-first approach, Fluid images and typography</p> <p>1.3 Core JavaScript-Variables, data types, operators, Conditional statements and loops, Functions and scope, Arrays and objects manipulation, DOM selection, traversal, and modification, Event handling (click, submit, keyboard, load)</p>	
Chapter 2	Advanced JavaScript (ES6+)	5 Hours
	<p>2.1 ES6 Syntax Features-Arrow functions and lexical this, Template literals and string interpolation, Object and array destructuring, Default parameters</p> <p>2.2 Advanced Operators and Modules-Spread and rest operators, ES6 modules (import, export, module structure)</p> <p>2.3 Asynchronous JavaScript-Callback concept and limitations, Promises lifecycle (pending, fulfilled, rejected), Chaining promises and error propagation, async / await syntax and try-catch handling</p> <p>2.4 Logic-Building Programs-Mathematical logic (prime, factorial, Fibonacci), Pattern generation using loops, Searching and sorting fundamentals</p>	
Chapter 3	Node.js Fundamentals	10 Hours
	<p>3.1 Node.js Environment-Node runtime architecture, npm installation, package management, Understanding package.json</p> <p>3.2 Execution Model-Event loop phases, Non-blocking I/O and callbacks</p> <p>3.3 Core Modules-File system (fs), Path utilities (path), HTTP server creation (http)</p> <p>3.4 Basic Server Development-Creating and running HTTP server, Handling requests and responses, Executing JavaScript outside browser</p>	
Chapter 4	File Handling with Node.js	6 Hours
	<p>4.1 File Operations- Reading, writing, appending, deleting files, Synchronous vs asynchronous methods</p> <p>4.2 JSON Handling-Parsing JSON data, Writing structured JSON files</p> <p>4.3 Directory Management-Creating, listing, renaming, deleting folders</p> <p>4.4 File Upload Basics-Introduction to upload middleware, Handling uploaded file storage</p>	
<p>Reference Books:</p> <p>R1: Jon Ducket, <i>HTML and CSS: Design and Build Websites</i>, Wiley Publications.</p> <p>R2: Jon Ducket, <i>JavaScript and JQuery: Interactive Front-End Development</i>, Wiley Publications.</p> <p>R3: Marijn Haverbeke, <i>Eloquent JavaScript (3rd Edition)</i>, No Starch Press.</p> <p>R4: Kyle Simpson, <i>You Don't Know JS: ES6 & Beyond</i>, O'Reilly Media.</p> <p>R5: Eric A. <p style="text-align: center;">Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) Sem – V</p>		
Course Type: Major		Course Code: CS-304-MJ-T
Course Title : Theory of Computer Science		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> • Knowledge of Sets, relations, functions, and logic in discrete mathematics • Knowledge of Fundamental Algorithms and Data Structures. • Basic knowledge of Programming Concepts (any language) 		
<p>Course Objectives</p> <ul style="list-style-type: none"> • To introduce the mathematical foundations of computation. • To examine the computational complexity of algorithms and problems. • To learn about grammars and formal languages and how they are used in computing. • To gain knowledge of formal computation models like Turing machines and automata. • To develop strong problem-solving and proof-building abilities. 		
<p>Course Outcomes</p> <p>On completion of the course, student will be able to–</p> <p>CO1: Utilize grammars, automata, and formal language principles to simulate computational issues.</p> <p>CO2: Sort or classify issues according to their decidability and computability.</p> <p>CO3: Understand theoretical ideas to real-world fields like cryptography, algorithms, AI and compilers.</p> <p>CO4: Build formal proofs for decidability, complexity, and language recognition.</p> <p>CO5: Understand Turing machines design and finite automata.</p> <p>CO6: Use formal languages and automata to model real world problem</p>		
Course Contents		
Chapter 1	Finite Automaton	8 Hours
<p>1.1 Introduction: Symbol, Alphabet, String, Prefix and Suffix of Strings, 1.2 Deterministic finite Automaton – Definition, and Examples. 1.3 Nondeterministic finite automaton – Definition and Examples. 1.4 NFA To DFA (NFA without Epsilon) 1.5 Finite automaton with output – Moore machine and Mealy machine, Definition and Examples.</p>		

1.6 Difference between Moore machine and Mealy machine		
1.7 Minimization of DFA, Algorithm and Problem using Table Method.		
Chapter 2	Regular Expressions and Languages	6 Hours
2.1 Regular Expressions (RE): Definition and Example		
2.2 Regular language -Definition and Examples.		
2.3 Conversion of RE to FA-Examples.		
2.4 Pumping lemma for regular languages and applications.		
Chapter 3	Context-Free Grammars and Languages	5 Hours
3.1 Definition of CFG		
3.1.1 Components: Non-terminals, Terminals, Production Rules, Start Symbol		
3.2 Simplification of CFG:		
3.2.1 Removing Useless Symbols		
3.2.2 Unit Production		
3.2.3 ϵ -production		
3.2.4 Nullable Symbol.		
3.3 Normal Forms: Chomsky Normal Form (CNF), Examples		
3.4 Greibach Normal Form (GNF), Examples		
Chapter 4	Push Down Automata	5 Hours
4.1 Definition of PDA and examples		
4.2 Construction of PDA using empty stack and final State method: Examples using stack method.		
Chapter 5	Turing Machine	6 Hours
5.1 The Turing Machine Model, Definition and Design of TM		
5.2 Problems on language recognizers.		
5.3 Language accepted by TM.

Teaching Scheme 04 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> • Data structures like stack, queue, and linked list. • File, file attributes and file operations. 		
<p>Course Objectives</p> <ul style="list-style-type: none"> • To understand the concept of process scheduling with the help of simulation. • To study the concept of demand paging in operating system. • To implement Banker’s algorithm for Deadlocks in Process management. • To simulate File system management • To study and implement various algorithms of disk scheduling 		
<p>Course Outcomes After completion of this course students will be able to, CO1: Understand and execute the Operations on processes. CO2: Understand and implement the concept of process scheduling. CO3: Implement and analyse FIFO, LRU, Optimal, and MFU page replacement algorithms using C Programming. CO4: Execute deadlock detection algorithms. CO5: Implement the File allocation methods CO6: Execute and analyse working of disk scheduling algorithms.</p>		
<p>Operating Environment/Software’s –</p> <ol style="list-style-type: none"> 1. Operating system platform – Linux 2. Programming language - C 		
Suggested List of Assignments		
Assignment No.	Title	No of Slots (12)
Assignment 1	Operations on processes :(Create a child process using fork() and commands like exec(), execv() and execvp())	01 slot
Assignment 2	Simulation of CPU Scheduling Algorithms – FCFS, SJF, Priority and Round Robin	03 slots
Assignment 3	Simulation of demand paging using memory page replacement algorithms – FIFO, LRU, OPT, MFU	02 slots
Assignment 4	Simulation of Banker’s algorithm of deadlock avoidance in processes of operating system	02 slots
Assignment 5	Simulation of File Allocation methods Contiguous allocation, Linked allocation, Indexed allocation	03 slots

Assignment 6	Simulation of Disk Scheduling algorithms – FCFS, SSTF, Scan, Look	01 slot
Reference Books: R1: Operating System Concepts ,Avi Silberschatz,Peter Galvin,Greg Gagne, Student Edition,Wiley Asia R2: Operating Systems – A Practical Approach, R. S. Salaria R3: Operating Systems: Design and Implementation, Andrew S. Tanenbaum, Albert S. Woodhull		

<p style="text-align: center;">Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – V Course Type: DSEC - III Course Code: 306-MJ-P Course Title : Practical Course based on CS-301-MJ-T & CS-303-MJ-T</p>		
Teaching Scheme 4 Hours / week	No. of Credits 2	Examination Scheme IE : 15 marks UE: 35 marks
<p>Prerequisites</p> <ul style="list-style-type: none"> • Basic knowledge of HTML tags and CSS properties. • Fundamental understanding of programming logic (loops, conditions). • Familiarity with web browser developer tools. 		
<p>Course Objectives:</p> <ul style="list-style-type: none"> • Enable students to write, compile, and execute Java programs using basic syntax and structure. • Practice using decision-making statements and loops to solve real-world problems. • To design and style structured, responsive web interfaces using semantic HTML and CSS layouts • To implement client-side logic and manipulate the Document Object Model (DOM) dynamically • To utilize modern JavaScript features (ES6+) for cleaner and more efficient coding practices. • To handle asynchronous operations and simulate real-world data fetching scenarios. • To set up and run a basic web server and manage local data storage using Node.js. 		
<p>Course Outcomes:</p> <p>CO1 : Understand the concept of classes and objects</p> <p>CO2 : Access and manipulate object data using arrays.</p> <p>CO3 : Develop modular programs using packages and implement interfaces for abstraction.</p> <p>CO4: Create responsive, multi-column web layouts using Flexbox and Media Queries.</p> <p>CO5: Perform dynamic DOM manipulation and client-side form validation.</p> <p>CO6: Apply ES6+ features.</p> <p>CO7: Implement asynchronous logics and build basic server-side applications and REST APIs.</p> <p>Operating Environment/Software's –</p> <ul style="list-style-type: none"> • Operating system platform – Linux , JDK 17 or 21 • Editor –Eclipse IDE , Visual Studio Code, Sublime Text, or Atom. 		

- Browser: Google Chrome, Mozilla Firefox, or Microsoft Edge.
- Runtime: Node.js (v14.x or higher) and npm.

Suggested List of Assignments

Assignment No.	Title	No of Slots (12)
Assignment 1	Java Tools and IDE, Simple java programs (Introduction to the java environment Use of java tools like java, javac, jdb and javadoc Defining simple classes and creating objects.)	01 slot
Assignment 2	Objects and Class (Creating a class and array of objects. Creating a package.)	01 slot
Assignment 3	Inheritance and Interfaces (To implement inheritance in java. To define abstract classes. To define and use interfaces and Functional Interface.)	01 slot
Assignment 4	Exception And File Handling (User defined Exception classes. Creation of files and demonstration of I-O operations)	01 slot
Assignment 5	GUI Designing, Event Handling (To demonstrate GUI creation using JavaFX, Event classes, JavaFX Charts)	02 slots
Assignment 6	Frontend Foundations (HTML5 & CSS3)	01 slot
Assignment 7	Interactive Web Logic (Core JavaScript & DOM)	01 slot
Assignment 8	Modern Scripting with ES6+	01 slot
Assignment 9	Asynchronous Programming in JavaScript	01 slot
Assignment 10	Server-Side Basics with Node.js	01 slot
Assignment 11	File System & API Fundamentals	01 slot

<p style="text-align: center;">Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – V Course Type: Major Elective Course Code: CS-307-MJ-T Course Title: Data Science And Analytics</p>		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> ● Basic of mathematics and statistics ● Advance Python programming knowledge ● Knowledge of databases 		
<p>Course Objectives</p> <ul style="list-style-type: none"> ● To equip students with knowledge and skills for data-driven problem solving using real-world datasets. ● To develop a strong understanding of Data Science concepts, lifecycle, and applications across domains. ● To enable students to perform data cleaning, pre-processing, transformation, and dimensionality reduction. ● To train students in effective data visualization techniques and tools for meaningful interpretation of data. ● To introduce foundational machine learning techniques for prediction, classification, and clustering. ● To encourage analytical thinking and ethical practices in data handling and decision-making. 		
<p>Course Outcomes</p> <p>On completion of the course, student will be able to–</p> <p>CO1: Understand fundamental concepts, components, and real-world applications of Data Science. CO2: Classify and interpret different types of data, identify outliers, and assess data quality using standard data quality measures. CO3: Apply data pre-processing techniques to prepare datasets for analysis. CO4: Analyse datasets using Exploratory Data Analysis (EDA) and evaluate appropriate data visualization techniques and tools to effectively communicate insights. CO5: Apply data analytics techniques and evaluate analytical models. CO6: Build and analyse basic machine learning models, select suitable learning approaches, and validate models for real-world data science problems.</p>		
Course Contents		
Chapter 1	Introduction to Data Science	4 Hours
<p>1.1 Introduction to data science 1.2 Concept of big data – 1.2.1 Definition 1.2.2 Data types with example (Structured, Semi-Structured, Unstructured Data) 1.2.3 Challenges with unstructured data</p>		

<p>1.2.4 Data Sources (Open Data, Social Media Data, Multimodal Data, standard datasets)</p> <p>1.2.5 Data Formats (Integers, Floats, Text Data, Text Files, Dense Numerical Arrays, Compressed or Archived Data, CSV Files, JSON Files, XML Files, HTML Files, Tar Files, GZip Files, Zip Files, Image Files)</p> <p>1.2.6 3 V's of bigdata (Volume, Velocity, Variety)give</p> <p>1.3 Application of Data Science</p> <p>1.4 Data Science Lifecycle</p> <p>1.5 Role of Data Scientist</p> <p>1.6 Data Scientist's Toolbox(Programmng Languages, Libraries, Database, Visualization tools)</p>		
Chapter 2	Data Understanding and Preprocessing	3 Hours
<p>2.1 Concepts of data –</p> <p>2.1.1 Definition</p> <p>2.1.2 Types of Data (Qualitative (categorical) – Nominal, Ordinal and Quantitative (numerical) – Discrete, Continuous)</p> <p>2.1.3 Outlier – Types of outlier with example</p> <p>2.2 Data Pre-processing –</p> <p>2.2.1 Definition</p> <p>2.2.2 Need to pre-process the data</p> <p>2.2.3 Data quality</p> <p>2.2.4 Measures of Data Quality (Accuracy, Completeness, Consistency, Timeliness, Validity, and Uniqueness)</p>		
Chapter 3	Data Pre-processing Techniques	7 Hours
<p>3.1 Data Pre-processing techniques-</p> <p>3.1.1 Data Cleaning – Missing Value, Noisy Data, Inconsistent Data</p> <p>3.1.2 Data Integration - Problems in data integration</p> <p>3.1.3 Data Transformation – Strategies of data transformation (Rescaling, Normalizing, Binarizing, Standardizing, Label and One Hot Encoding)</p> <p>3.2 Data Reduction -</p> <p>3.2.1 Dimensionality Reduction</p> <p>3.2.2 Feature Selection</p> <p>3.2.3 Feature Extraction</p> <p>3.2.4 Data Cube Aggregation</p> <p>3.2.5 Numerosity Reduction</p> <p>3.3 Data Discretization –</p> <p>3.3.1 Approaches of data Discretization (Top-down, Bottom-up)</p> <p>3.3.2 Types of Data Discretization techniques (Equal Width Binning, Equal Frequency Binning)</p> <p>3.5 Introduction to Exploratory Data Analysis(EDA)</p>		
Chapter 4	Data Visualization	3 Hours
<p>4.1 Introduction</p> <p>4.2 Advantages of data Visualization</p> <p>4.3 Advantages and visual encoding</p> <p>4.4 Data visualization libraries</p> <p>4.5 Data visualization tools - Histograms, Bar charts/graphs, Scatter plots, Line charts, Area plots, Pie charts, Donut charts, Boxplots, Bubble plots, Heat map, Dendrogram, Venn diagram, Treemap, 3D scatter plots</p>		

4.5 Advanced data visualization tools- Wordclouds, Visualization of geospatial data		
Chapter 5	Introduction to Data Analytics	4 Hours
<p>5.1 Introduction</p> <p>5.2 Life Cycle of Data Analytics</p> <p>5.3 Types of data analytics - Descriptive Analytics, Diagnostic Analytics, Predictive Analytics, Prescriptive Analytics</p> <p>5.4 Mathematical models - Introduction, Need of mathematical models in Data Analytics</p> <p>5.5 Model evaluation – Metrics for evaluating classifiers – Accuracy, Confusion matrix, Precision, Recall and F1 Score, ROC(Receiver-Operator Characteristic), AUC (Area Under ROC Curve), Mean Squared Error (MSE), Cross Validation, Log-loss</p>		
Chapter 6	Introduction to Machine Learning	9 Hours
<p>6.1 Introduction to Machine Learning, Deep Learning, Artificial intelligence</p> <p>6.2 Applications for machine learning in data science</p> <p>6.3 Modelling process, Engineering features and selecting a model</p> <p>6.4 Training the model</p> <p>6.5 Validating the model</p> <p>6.6 Predicting new observations</p> <p>6.7 Types of machine learning- Supervised learning, Unsupervised learning, Semi-supervised learning, Reinforcement Learning</p> <p>6.8 Machine learning models –</p> <p>6.8.1 Supervised Learning Model – Regression (Linear Regression, Polynomial Regression, Logistic Regression), Classification (KNN, Random Forest)</p> <p>6.8.2 Unsupervised Learning Models - Clustering (K-means clustering), Association (Apriori Algorithm)</p>

Savitribai Phule Pune University T.Y.B.Sc.(Computer Science) - Sem – V		
Course Type: Major Elective		Course Code: CS-309-MJ-T
Course Title: Database Technologies		
Teaching Scheme	No. of Credits	Examination Scheme
02 Hours / Week	2	IE: 15 Marks UE: 35 Marks
Prerequisites- <ul style="list-style-type: none"> • Basic Database Knowledge: Understanding of RDBMS concepts, SQL queries, tables, and relationships. • Programming language (C, C++, Java, or Python) for database interaction. • Concepts of network architecture and client-server communication 		
Course Objectives- After completing this course, students will be able to: <ul style="list-style-type: none"> • Understand the evolution of databases and modern data management technologies. • Learn NoSQL databases and their types (Key–Value, Document, Column-Family, Graph). • Gain practical skills in MongoDB for data modelling, CRUD operations, and aggregation. • Understand distributed, cloud, and Big Data database concepts, including scalability and fault tolerance. • Apply database concepts to real-world applications and explore emerging trends and career opportunities. 		
Course Outcomes- After successfully completing this course, students will be able to: <p>CO1: Understand the differences between RDBMS, NoSQL, and Big Data platforms.</p> <p>CO2: Identify and use appropriate NoSQL database types for different applications.</p> <p>CO3: Design and implement MongoDB databases with CRUD, indexing, and aggregation.</p> <p>CO4: Understand distributed/cloud database architectures and basic security and recovery strategies.</p> <p>CO5: Apply database knowledge to industrial use cases and stay informed about emerging trends and career paths.</p>		
Course Contents		
Chapter 1	Evolution of Databases and Modern Data Management	5 Hours

<ul style="list-style-type: none"> 1.1 Evolution of data storage systems 1.2 Limitations of traditional RDBMS in Big Data and cloud environments 1.3 Structured vs semi-structured vs unstructured data 1.4 Introduction to Modern Database Technologies <ul style="list-style-type: none"> 1.4.1 SQL databases (relational, traditional) 1.4.2 NoSQL databases: Document, Key–Value, Column-Family, Graph 1.4.3 Distributed and cloud databases 1.4.4 Big Data platforms (HDFS, Hadoop ecosystem) 1.4.5 Comparison: Features, scalability, consistency, availability 1.5 Industrial relevance and emerging trends 		
Chapter 2	NoSQL Databases – Concepts & Architecture	6 Hours
<ul style="list-style-type: none"> 2.1 Introduction to NoSQL databases <ul style="list-style-type: none"> 2.1.1. Definition, need, and evolution of NoSQL 2.1.2. Limitations of traditional RDBMS and why NoSQL is needed 2.2 CAP Theorem & ACID vs BASE <ul style="list-style-type: none"> 2.2.1. Consistency, Availability, Partition Tolerance (CAP) 2.2.2. ACID properties in RDBMS vs BASE properties in NoSQL 2.3 Distributed data storage concepts <ul style="list-style-type: none"> 2.3.1. Data partitioning (sharding), replication, clustering 2.3.2. Nodes, clusters, and data distribution in distributed systems 2.4 Scalability, replication, and fault tolerance <ul style="list-style-type: none"> 2.4.1 Vertical vs Horizontal scaling 2.4.2 Replication strategies 2.4.3 Handling failures and ensuring data availability 		
Chapter 3	NoSQL Data Models	3 Hours
<ul style="list-style-type: none"> 3.1 Types of NoSQL Databases <ul style="list-style-type: none"> 3.1.1 Key–Value: Redis, DynamoDB - Overview and applications 3.1.2 Column-Family: Cassandra, HBase - Concept and applications 3.1.3 Graph: Neo4j - Nodes, relationships, Cypher query overview 3.1.4 Document-oriented model – MongoDB <ul style="list-style-type: none"> 3.1.4.1 MongoDB architecture & installation 3.1.4.2 Collections & documents 3.1.4.3 Data types in MongoDB 3.1.4.4 CRUD operations 3.1.5 Indexing and aggregation framework 3.1.6 Mini project design (Student Management / Blog System) 		
Chapter 4	Big Data Technologies and Hadoop Ecosystem	4 Hours

<p>4.1 Introduction to Big Data – characteristics, sources, challenges</p> <p>4.2 Hadoop ecosystem overview – HDFS, MapReduce basics</p> <p>4.3 Comparison: RDBMS vs NoSQL vs Big Data platforms</p> <p>4.4 Real-world case studies – IoT, E-commerce, Social Media</p>		
Chapter 5	Distributed & Cloud NoSQL Databases, Security, and Emerging Trends	5 Hours
<p>5.1 Overview of distributed and cloud NoSQL databases – Cassandra, Redis, Neo4j (conceptual)</p> <p>5.2 Security challenges in NoSQL and cloud databases</p> <p>5.3 Authentication and authorization concepts</p> <p>5.4 Backup and recovery in distributed databases</p> <p>5.5 Industrial applications of NoSQL databases</p> <p style="padding-left: 20px;">5.5.1 Case studies (E-commerce, Social Media, IoT)</p> <p style="padding-left: 20px;">5.5.2 Emerging trends and career opportunities</p>		
<p>Reference Books:</p> <p>R1 : Database System Concepts – Abraham Silberschatz, Henry F. Korth, S. Sudarshan (Fundamentals of RDBMS, transactions, and SQL concepts)</p> <p>R2 : NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence – Pramod J. Sadalage, Martin Fowler (Types of NoSQL databases, data models, and use cases)</p> <p>R3 : MongoDB: The Definitive Guide – Kristina Chodorow (Practical guide for MongoDB CRUD, indexing, aggregation, replication, and sharding)</p> <p>R4 : Hadoop: The Definitive Guide – Tom White (Big Data concepts, HDFS, MapReduce, and Hadoop ecosystem overview)</p> <p>R5 : Designing Data-Intensive Applications – Martin Kleppmann (Distributed databases, replication, scalability, fault tolerance, and cloud database principles)</p>		

<p style="text-align: center;">Savitribai Phule Pune University</p> <p style="text-align: center;">T.Y.B.Sc. (Computer Science) - Sem –V</p> <p>Course Type: Major Elective Course Code: CS -3010-MJ-P</p> <p style="text-align: center;">Course Title: Lab Course based on CS-309-MJ-T</p>		
Teaching Scheme 04 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> ● Basic understanding of Database Management Systems (DBMS) ● Knowledge of SQL and data organization concepts ● Familiarity with basic programming concepts and JSON format 		
<p>Course Objectives</p> <ul style="list-style-type: none"> ● To understand modern data models and data representation techniques ● To install, configure, and work with MongoDB database systems ● To perform data manipulation and querying using MongoDB ● To explore advanced data processing techniques like aggregation and indexing ● To understand graph databases and perform querying using Neo4j 		
<p>Course Outcomes</p> <p>On completion of the course, student will be able to–</p> <p>CO1: Design and represent data using structured and semi-structured formats</p> <p>CO2: Install and configure MongoDB and create databases and collections</p> <p>CO3: Perform CRUD operations and manipulate data in MongoDB</p> <p>CO4: Apply aggregation and indexing techniques for efficient data processing</p> <p>CO5: Model and query graph data using Neo4j and Cypher language</p>		
<p>Operating Environment/Softwares –</p> <p>MongoDB Community Server</p> <p>MongoDB Compass</p> <p>Neo4j Desktop / Neo4j Browser</p> <p>Windows / Linux Operating System</p> <p>Command Line Interface / VS Code</p>		
Suggested List of Assignments		
Assignment No.	Title	No of Slots (12)

Assignment 1	Design and Representation of Data using Structured, Semi-Structured, and JSON Formats	2 Slots
Assignment 2	Installation and Configuration of MongoDB with Database and Collection Creation	2 Slots
Assignment 3	Execution of CRUD Operations and Data Manipulation in MongoDB	2 Slots
Assignment 4	Application of Aggregation Framework and Indexing Techniques in MongoDB	2 Slots
Assignment 5	Modeling of Graph Data using Nodes and Relationships in Neo4j	2 Slots
Assignment 6	Implementation of Graph Queries and Relationship Analysis using Cypher in Neo4j	2 Slots
Reference Books: R1 : Big Data Black Book by DT Editorial Services R2 : Data Modeling with NoSQL Database by Pramod Sadalage R3 : NoSQL Distilled by Pramod J. Sadalage, Martin Fowler R4 : SQL & NoSQL Databases: Models, Languages, Security and Architectures by Andreas Meier, Michael Kaufmann		

1.4.4 Based on triggering mechanisms 1.5 Purpose and Functional Aspects of Embedded Systems: 1.5.1 Data acquisition, storage, and representation 1.5.2 Data communication 1.5.3 Signal processing 1.5.4 Monitoring and control 1.5.5 Application-specific user interface 1.6 Major Application Areas: Consumer electronics, automotive, medical, industrial, communication, and IoT systems.		
Chapter 2	Embedded System Architecture	8 Hours
2.1 Typical Embedded System Block Diagram and Functional Explanation 2.2 Processing Core of Embedded Systems: 2.2.1 General purpose processors 2.2.2 Domain-specific processors 2.2.3 ASICs, PLDs, and COTS components 2.3 Memory Organization: 2.3.1 RAM, ROM, PROM, Flash memory 2.3.2 Criteria for memory selection in embedded systems 2.4 Sensors and Actuators: 2.4.1 Introduction to sensors and classification 2.4.2 Actuators: types and applications 2.5 Communication Interfaces: 2.5.1 On-board interfaces: UART, I2C, SPI, Parallel Interface 2.5.2 External interfaces: RS-232, USB, IrDA		
Chapter 3	Arduino Fundamentals	7 Hours
3.1 Introduction to Single Board Computers (SBCs) 3.2 Arduino Ecosystem and Open-Source Philosophy 3.3 Arduino UNO Architecture: ATmega328P Block Diagram 3.4 Power Supply, Clock System, and Reset Circuitry 3.5 Arduino Development Board Variants and Shields 3.6 Arduino IDE: Installation, Sketch Structure, and Compilation Process.		
Chapter 4	Programming & Interfacing with Arduino	7 Hours
4.1 Digital Input/Output Programming 4.2 Analog Input, ADC, and PWM Concepts 4.3 Timers, Interrupts, and Serial Communication (UART, I2C, SPI) 4.4 Interfacing Sensors: Temperature, Light, Motion Sensors 4.5 Interfacing Actuators: LED, Relay, DC Motor, Servo Motor 4.6 Case Studies: Home Automation, Security Systems, Environmental Monitoring, Industrial Automation

<p style="text-align: center;">Savitribai Phule Pune University, Pune T. Y. B. Sc. (Computer Science) - Sem – V Course Type: Major Elective Course Code: CS-3012-MJ-P Course Title: Lab Course on CS-3011</p>		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> • Basic knowledge of electronics and digital logic • Knowledge of Microcontroller basics (Arduino/8051) and Raspberry Pi 		
<p>Course Objectives</p> <p>The objectives of this laboratory course are to:</p> <ul style="list-style-type: none"> • Reinforce theoretical concepts of embedded systems through hands-on experiments • Develop skills in Arduino programming and debugging • Enable students to interface sensors and actuators with embedded platforms • Familiarize students with serial communication and real-time control • Encourage application-oriented thinking through mini case studies 		
<p>Course Outcomes</p> <p>On completion of the laboratory course, students will be able to:</p> <p>CO1: Use Arduino IDE for writing, compiling, and uploading programs</p> <p>CO2: Implement digital and analog I/O based embedded applications</p> <p>CO3: Interface common sensors and actuators with Arduino</p> <p>CO4: Use timers, interrupts, and communication protocols effectively</p> <p>CO5: Design and demonstrate simple embedded system applications</p>		
<p>Operating Environment/Softwares – Laboratory Requirements</p> <ul style="list-style-type: none"> • Laptop/ Desktop System • Arduino UNO boards with USB cable • Breadboard, jumper wires • Sensors: LM35/DHT11, LDR, PIR • Actuators: LEDs, relay module, DC motor, servo motor • Power supply and basic electronic components 		
Course Contents		
SECTION - I (12 Experiments)		
Group A:	Basics of Embedded Systems & Arduino (Any 3)	3 Slots

Experiment-1 is compulsory and Select any two form Experiment-2 to 4		
<ol style="list-style-type: none"> 1. Study of Arduino UNO board: pin configuration, power supply, onboard components, Installation and familiarization of Arduino IDE; writing and executing first sketch (on board led Blink program) (Compulsory) 2. Digital output interfacing: LED blinking using delay and loop constructs. 3. Interfacing of LEDs with Arduino for pattern generation. 4. Digital input interfacing: Multiple Switch/button interfacing with Multiple LEDs control 		
Group B:	Analog I/O and Timing (Any 3)	3 Slots
<ol style="list-style-type: none"> 5. Analog input interfacing using potentiometer and displaying values on Serial Monitor 6. PWM-based LED brightness control using analogWrite() 7. Display of real time on serial monitor with Interfacing to an External Real-Time Clock (RTC) 8. Interrupt-based input handling using external interrupts. 		
Group C:	Sensor Interfacing (Any 3)	3 Slots
<ol style="list-style-type: none"> 9. Interfacing temperature sensor (LM35 / DHT11) and displaying values on Display. 10. Interfacing light sensor (LDR) for automatic light control system 11. Interfacing ultrasonic / IR sensor for Displacement measurement. 12. Interfacing of speakers / buzzers to generate different tones. 		
Group D:	Actuators and Communication (Any 3)	3 Slots
<ol style="list-style-type: none"> 13. Interfacing relay module for AC/DC load control (demonstration-level) 14. Interfacing DC motor using motor driver (L293D / L298) to control speed using Potentiometer. 15. Controlling an RGB LED Using the BlinkM Module (I2C communication) 16. Serial communication using USB: data transmission between Arduino and PC 		
SECTION - II : ACTIVITY (Any ONE Equivalent to 3 Experiments)		
<ol style="list-style-type: none"> 1. Electronics Hobby Project – Design and develop a small electronics-based project and submit a report. 2. Field Visit Report – Visit an electronics industry and submit a detailed report.

Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – V Course Type: VSC Course Code: CS-321-VSC-P Course Title: Foundation of Artificial Intelligence and Machine Learning		
Teaching Scheme 04 Hours/Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
Prerequisites <ul style="list-style-type: none"> ● Basic knowledge of Linear Algebra and Understanding of Probability and Statistics ● Basic programming knowledge in Python 		
Course Objectives <ul style="list-style-type: none"> ● To understand fundamental concepts of Machine Learning and AI ● To implement basic ML algorithms using Python ● To develop hands-on programming skills for implementing AI and ML algorithms to solve practical problems. ● To identify and analyze applications of AI and ML in various domains such as healthcare, finance, education, and robotics. 		
Course Outcomes On completion of the course, student will be able to– CO1: Analyze and solve real-world constraint satisfaction problems CO2: Optimize search algorithms using techniques CO3: Understand and execute the working of Artificial Neural Networks and CNN. CO4: Understand, Evaluate and Implement the model based learning CO5: Implement the fundamental concepts Naïve Bayes CO6: Utilize AI and ML libraries such as NumPy, Pandas, Scikit-learn		
Operating Environment / Tools (Suggested) <ul style="list-style-type: none"> ● Operating System: Linux Python (3.x) Jupyter Notebook / Google Colab Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn 		
Course Contents		
Assignment 1	Problem Solving Using Search	1 Slot

<ul style="list-style-type: none"> • Space State Representation • Blind / Uninformed Searches: Breadth First Search (BFS) – Monkey Banana • Water Jug Problem • Depth Limited Search 		
Assignment 2	Informed Search Techniques	2 Slots
<ul style="list-style-type: none"> • Best First Search • A* Algorithm • AO* Algorithm • Heuristic functions • Hill Climbing • Means-End Analysis 		
Assignment 3	Constraint Satisfaction Problems (CSP)	1 Slot
<ul style="list-style-type: none"> • Backtracking algorithm • Domain Reduction Works • GRAPH/Map Coloring Problem • Sudoku 		
Assignment 4	Game Playing Algorithms for Decision Making	2 Slots
<ul style="list-style-type: none"> • Minimax Algorithm • Alpha-Beta Pruning • Game AI (Chess, Tic-Tac-Toe) • Monte Carlo Tree Search (MCTS) 		
Assignment 5	Knowledge Representation and Logical Reasoning	1 Slot
<ul style="list-style-type: none"> • Propositional Logic and Predicate Logic • Rule-based systems • Forward Chaining • Backward Chaining • Ontological Engineering and Knowledge Graphs 		
Assignment 6	Basics of Machine Learning	1 Slot
<ul style="list-style-type: none"> • Machine Learning Types and Learning Algorithms • Supervised <ul style="list-style-type: none"> ▪ Bayes' Theorem, Gaussian and Bernoulli Naïve Bayes, ▪ AdaBoost (Boosting) ▪ Multiple Models (Voting) ▪ Decision Trees ▪ Random Forest (Bagging) • Unsupervised <ul style="list-style-type: none"> ▪ Distance Metrics 		

	<ul style="list-style-type: none"> ▪ Objective Functions ▪ K-Means 	
Assignment 7	Support Vector Machine (SVM)	1 Slot
	<ul style="list-style-type: none"> • Hyperplane • Classification <ul style="list-style-type: none"> ▪ Linear SVM ▪ Non-linear SVM 	
Assignment 8	Artificial Neural Networks (ANN) and Convolutional Neural Networks (CNN)	3 Slots
	<ul style="list-style-type: none"> • Basic Neural Network • ANN model for classification • ANN for Regression • CNN for Image recognition • CNN for Object detection • CNN for Computer vision tasks 	
Assignment 9	Case Studies	1 Slot
	<ul style="list-style-type: none"> • Robot Navigation • Timetable Scheduling • Fraud Detection Systems • Autonomous Systems Such as Self-Driving Cars • Handwritten Digit Recognition and Speech Processing.

Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – VI		
Course Type: Major	Course Code: CS-352-MJ-T	
Course Title : Design Framework		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
Prerequisites <ul style="list-style-type: none"> ● Basic knowledge of HTML5 and CSS3 ● Familiarity with Object-Oriented Programming (OOP) principles such as classes, objects, and inheritance. ● Basic command-line operations and Experience with any code editor or IDE ● Basic knowledge of REST concepts and client–server communication (optional but beneficial). 		
Course Objectives <ul style="list-style-type: none"> ● To introduce students to Angular framework and Single Page Application (SPA) concepts. ● To develop programming skills using TypeScript for Angular application development. ● To enable students to design component-based web applications. ● To provide hands-on experience with routing, forms, and validation techniques. ● To familiarize students with services and REST API integration. ● To guide students in building and deploying a complete Angular SPA mini project. 		
Course Outcomes On completion of the course, student will be able to– <p>CO1: Understand the fundamentals of modern Angular and explain core concepts required to build single-page applications.</p> <p>CO2: Develop Angular applications from the ground up using standalone components and signals for efficient and scalable design.</p> <p>CO3: Implement Angular routing for navigation between views.</p> <p>CO4: Develop forms with validation and integrate REST APIs using services.</p> <p>CO5: Build and deploy a complete Angular Single Page Application mini-project.</p> <p>CO6: Develop modern, complex, responsive and scalable web applications with Angular</p>		
Course Contents		
Chapter 1	Introduction to Angular	4 Hours
1.1 Introduction to Angular Framework <ul style="list-style-type: none"> 1.1.1 Angular Features and Architecture 1.1.2 SPA Concepts 1.1.3 Angular vs AngularJS 1.2 TypeScript Fundamentals <ul style="list-style-type: none"> 1.2.1 Data Types, Classes, Interfaces 		

1.2.2 Functions and Arrow function 1.2.2 Modules and Decorators 1.3 Angular Design Philosophy 1.3.1 Component reusability 1.3.2 Maintainable application structure 1.3.3 Separation of concerns		
Chapter 2	Understanding Components & Data Bindings	7 Hours
2.1 Angular CLI(Angular Command line Interface) 2.1.1 ng new, ng generate, ng build, ng serve 2.1.2 Project Structure 2.2 Components and Templates 2.2.1 Creating Components and Components Lifecycle Hooks(ngOnInit, ngOnChanges, ngOnDestroy) 2.2.2 Template Syntax 2.3 Data Binding 2.3.1 Interpolation 2.3.2 Property Binding 2.3.3 Event Binding 2.3.4 Two-way Binding 2.4 Directives and Pipes 2.4.1 Structural Directives 2.4.2 Attribute Directives 2.4.3 Built-in Pipes		
Chapter 3	Angular Routing	7 Hours
3.1 Introduction to Angular Router 3.1.1 Concept of Client-side Routing 3.1.2 Router Module and router-outlet 3.1.3 Navigation using router Link 3.2 Route Configuration 3.2.1 Defining Routes and Path Mapping 3.2.2 Default and Wildcard Routes 3.2.3 Passing Parameters in Routes 3.3 Advanced Routing Concepts 3.3.1 Child Routes 3.3.2 Route Guards (CanActivate, CanDeactivate) 3.3.3 Lazy Loading of Modules 3.4 Preloading Strategies 3.4.1 Preload all modules		

3.4.2 Custom preloading strategy		
3.4.3 Error handling during navigation, Handling 404 and Error Routes		
Chapter 4	Services and Dependency Injection	6 Hours
<p>4.1 Introduction to Services</p> <p>4.1.1. Creating a Service</p> <p>4.1.2 Built in Services (HTTP Services, Routing Services, From Services)</p> <p>4.2 Dependency Injection</p> <p>4.2.1 Core concepts in Dependency Injection</p> <p>4.2.2 Need for DI in modern applications</p> <p>4.2.3 Benefits of DI</p> <p>4.2.4 Angular DI Framework</p> <p>4.2.5 Providing Dependencies</p> <p>4.2.6 Injection Tokens</p> <p>4.2.7 DI Decorators</p> <p>4.3 Providers</p> <p>4.3.1 Types of Providers</p> <p>4.3.2 Using RESTful services with DI</p>		
Chapter 5	Angular Forms and Validation	6 Hours
<p>5.1 Introduction to Angular Forms</p> <p>5.1.1 Data flow in forms</p> <p>5.2 Template driven forms</p> <p>5.2.1 Form Controls</p> <p>5.2.2 Built-in Validators</p> <p>5.2.3 Custom Validation</p> <p>5.3 Reactive forms</p> <p>5.3.1 FormGroup and FormControl</p> <p>5.3.2 Dynamic Forms</p> <p>5.4 Handling input fields with forms</p> <p>5.5 Use of ngModel & ngGroup</p> <p>5.6 Angular Validating</p> <p>5.6.1 Validating forms with ngModel & ngGroup</p> <p>5.6.2 Validating specific validation error</p> <p>5.6.3 Output error messages</p>

Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem –VI		
Course Type: Major	Course Code: CS-353-MJ-T	
Course Title : Web Technology-II		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
Prerequisites <ul style="list-style-type: none"> ● Basic knowledge of HTML, CSS, JavaScript, and ES6+ features. ● Ability to create a basic server using Node.js. ● Understanding of relational databases and basic SQL (CRUD operations). ● Fundamental knowledge of HTTP, client–server architecture, and REST concepts. 		
Course Objectives <ul style="list-style-type: none"> ● To understand and implement database connectivity using PostgreSQL and Node.js with performance and security considerations. ● To design and develop RESTful APIs using Express framework following MVC architecture principles. ● To develop interactive frontend applications using React components, hooks, and API integration. ● To implement secure authentication and authorization mechanisms using sessions, cookies, and JWT. 		
Course Outcomes On completion of the course, student will be able to– <ul style="list-style-type: none"> CO1: Implement database connectivity using PostgreSQL with secure and optimized query execution techniques. CO2: Design and develop RESTful APIs using Express framework following MVC architecture and proper documentation standards. CO3: Develop interactive frontend applications using React components, hooks, and backend API integration. CO4: Analyze and implement secure authentication and authorization mechanisms using sessions, cookies, and JWT. 		
Course Contents		
Chapter 1	Database Connectivity	4 Hours
1.1 PostgreSQL Integration- Installing PostgreSQL and pg module, Establishing database connection 1.2 Performance and Security-Connection pooling, Parameterized queries, Environment variables configuration, SQL injection prevention techniques		
Chapter 2	CRUD Operations and REST API	6 Hours

2.1 REST Architecture- REST principles and resource design, HTTP methods and status codes		
2.2. Express Framework Structure- Routing and middleware, MVC architectural overview		
2.3. CRUD Implementation-Create, Read, Update, Delete APIs, Pagination and filtering techniques		
2.4. API Documentation-Postman collections, Swagger/ OpenAPI basics		
Chapter 3	Introduction to React	10 Hours
3.1 React Fundamentals- Components and JSX syntax, Rendering flow and virtual DOM concept		
3.2. State Management- Props vs state, Updating UI dynamically		
3.3. React Hooks- useState for state handling, useEffect for lifecycle and API calls		
3.4. Integration and Routing- Fetching backend APIs, Basic client-side routing		
Chapter 4	Forms, Sessions and Cookies	7 Hours
4.1 Session Management-Express-session configuration, Session storage and lifecycle		
4.2. Cookies Handling-Creating, reading, deleting cookies, Secure and HTTP-only flags		
4.3. Form Processing-Server-side validation, Login and logout workflow		
4.4. Authentication Models- Session-based vs token-based comparison		
Chapter 5	Authentication and Authorization	3 Hours
5.1 Credential Security-Password hashing using bcrypt, Salting and verification		
5.2. Token-Based Authentication-JWT structure and lifecycle, Token generation and validation		
5.3. Access Control-Role-based authorization, Middleware for protected routes

Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> ● Basic knowledge of familiarity with Finite Automata (FA), Regular Expressions (RE), and Context-Free Grammars (CFG). ● Knowledge of stacks, trees, graphs, symbol tables and Algorithms and basic complexity concepts ● Basic understanding of machine coding and instruction sets. 		
<p>Course Objectives</p> <ul style="list-style-type: none"> ● To understand lexical analysis, syntax analysis, and semantic analysis. ● To describe the basic ideas and stages involved in compiler design. ● To examine the runtime environment and intermediary code creation. ● To recognize how to manage symbol tables and handle errors. ● To learn how to build and implement compiler components in a practical way. 		
<p>Course Outcomes</p> <p>On completion of the course, student will be able to–</p> <p>CO1: Describe compiler phases and structure of a compiler.</p> <p>CO2: Build or create lexical analyzers by utilizing finite automata and regular expressions.</p> <p>CO3: Build parsers with context-free grammars and parsing methods (LL, LR).</p> <p>CO4: Evaluate or design straightforward target code generators and comprehend runtime environments</p> <p>CO5: Utilize code optimization strategies</p> <p>CO6: Use CFG's to parse programming language</p>		
Course Contents		
Chapter 1	Context-Free Grammars and Languages	6 Hours
<p>1.1 Context-Free Grammar (CFG)</p> <p>1.1.1 Basics of CFG</p> <p>1.1.2 Parse Tree</p> <p>1.1.3 Left-most Derivation (LMD) – Definition and Example</p> <p>1.1.4 Right-most Derivation (RMD) – Definition and Example</p> <p>1.1.5 Examples of CFG for simple expressions or statements</p>		

1.2 Ambiguous Grammar 1.2.1 Definition / Concept of Ambiguity 1.2.2 Examples of Ambiguous Grammar 1.2.3 Effect of Ambiguity on Parsing 1.2.4 Resolving Ambiguity (Briefly: precedence & associativity)		
Chapter 2	Introduction to Compiler	4 Hours
2.1 Definition of Compiler 2.2 Structure of Compiler 2.2.1 Front End 2.2.2 Back End 2.3 Phases of Compiler 2.3.1 Lexical Analysis 2.3.2 Syntax Analysis 2.3.3 Semantic Analysis (idea only) 2.3.4 Intermediate Code Generation (idea) 2.3.5 Code Optimization (idea) 2.3.6 Code Generation (idea) 2.4 Types of Compiler (One-pass, Multi-pass, Cross Compiler) 2.4.1 Definition 2.4.2 Advantages / Disadvantages / Features 2.4.3 Examples		
Chapter 3	Lexical Analysis(Scanner)	5 Hours
3.1 Role of Lexical Analyzer 3.2 Tokens, Lexemes & Patterns 3.2.1 Definitions + Example 3.3 Finite Automata as Lexical Analyzer 3.3.1 Role of FA in token recognition 3.3.2 FA Structure and Working 3.3.3 Identifier and Number Recognition Using FA 3.3.4 Lexical Error Detection 3.3.5 Advantages of FA in Lexical Analysis		
Chapter 4	Syntax Analysis (Parser)	12 Hours
4.1 Introduction to Parser 4.1.1 Definition of Parser 4.1.2 Types of Parsers 4.1.2.1 Top-Down Parsers 4.1.2.2 Bottom-Up Parsers 4.2 Top-Down Parsers 4.2.1 Backtracking: Method & Problems 4.2.2 Drawbacks of Top-Down Parsing with Backtracking 4.2.3 Left Recursion		

- 4.2.3.1 Direct Left Recursion
- 4.2.3.2 Indirect Left Recursion
- 4.2.3.3 Examples
- 4.2.4 Left Factoring
 - 4.2.4.1 Need for Left Factoring
 - 4.2.4.2 Examples
- 4.3 Recursive Descent Parsing
 - 4.3.1 Definition
 - 4.3.2 Implementation of Recursive Descent Parser Using Recursive Procedures
 - 4.3.3 Examples
- 4.4 FIRST & FOLLOW
 - 4.4.1 Definition of FIRST Set
 - 4.4.2 Definition of FOLLOW Set
 - 4.4.3 Rules to Find FIRST & FOLLOW
 - 4.4.4 Examples
- 4.5 Predictive Parser (LL(1) Parser)
 - 4.5.1 Definition
 - 4.5.2 Model
 - 4.5.3 Implementation
 - 4.5.4 Examples
- 4.6 Bottom-Up Parsers
 - 4.6.1 Definition
 - 4.6.2 Examples of Bottom-Up Parser Implementation
 - 4.6.3 Types of Bottom-Up Parsers
 - 4.6.3.1 Shift-Reduce Parsing
 - 4.6.3.2 LR Parsers (SLR, CLR, LALR)
 - 4.6.3.3 Operator Precedence Parsing
- 4.7 Shift-Reduce Parsing
 - 4.7.1 Stack Implementation
 - 4.7.2 Operations
 - 4.7.2.1 Shift
 - 4.7.2.2 Reduce
 - 4.7.2.3 Accept
 - 4.7.2.4 Error
 - 4.7.3 Example(s)
- 4.8 LR Parsers
 - 4.8.1 Components of LR Parser
 - Stack
 - Input Buffer
 - ACTION Table
 - GOTO Table
 - 4.8.2 Types of LR Parsers
 - 4.8.2.1 SLR(1)

4.8.2.2 Canonical LR (CLR)

4.8.2.3 LALR

4.8.3 Differentiation Between LR Parsers, Examples

4.9 Operator Precedence Parser

4.9.1 Definition

4.9.2 Operator precedence & associativity and Example

Chapter 5

Code Generation and Optimization

3 Hours

5.1 Compilation of expression

5.2 Concepts of operand descriptors and register descriptors with example.

5.3 Intermediate code for expressions

5.3.1 Postfix notations

5.3.2 Triples

5.3.3 Quadruples

5.3.4 Expression trees.

5.4 Code Optimization

5.4.1 Optimizing transformations

5.4.2 Compile time evaluation

5.4.3 Elimination of common sub expressions

5.4.4 Dead code elimination

5.4.5 Frequency reduction

5.4.6 Strength reduction

<p style="text-align: center;">Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – VI Course Type: Major Course Code: CS-355-MJ-P Course Title: Lab Course based on CS-352-MJ-T</p>		
Teaching Scheme 04 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> ● Basic knowledge of HTML, CSS, and JavaScript. ● Fundamentals of TypeScript. ● Understanding of object oriented programming concepts ● Familiarity with web browsers and basic command-line usage. 		
<p>Course Objectives</p> <ul style="list-style-type: none"> ● To Develop Angular applications using components, routing, and modules. ● To Design forms with validations and manage user input effectively. ● To Create and use services with dependency injection and API integration. ● To Build basic single-page applications with error handling and debugging. 		
<p>Course Outcomes</p> <p>On completion of the course, student will be able to–</p> <p>CO1: Analyze and design a simple Angular application by integrating components, directives, data binding, and built-in pipes to solve a given problem.</p> <p>CO2: Implement dynamic routing using route parameters and query parameters.</p> <p>CO3: Develop mechanisms to handle invalid routes and navigation errors using 404 pages and error handling techniques.</p> <p>CO4: Implement template-driven forms with built-in validations, validation messages, and form submission for basic data collection.</p> <p>CO5: Create and use Angular services with dependency injection to share data and implement basic business logic across components.</p>		
<p>Operating Environment/Softwares –</p> <p>Operating System: Linux Framework: Angular (latest stable version) Runtime Environment: Node.js Package Manager: npm Code Editor / IDE: Visual Studio Code Web Browser: Google Chrome / Mozilla Firefox Optional Tools: Angular CLI, Postman (for API testing)</p>		
Suggested List of Assignments		
Assignment No.	Title	No of Slots (12)
Assignment 1	<ul style="list-style-type: none"> ● Angular Setup & TypeScript Fundamentals ● TypeScript Interfaces & Angular Concepts 	2 Slots
Assignment 2	<ul style="list-style-type: none"> ● Angular Project Setup, Components & Lifecycle ● Data Binding, Directives & Pipes 	2 Slots
Assignment 3	<ul style="list-style-type: none"> ● Angular Basic Routing & Navigation ● Handling 404 Page, Error Handling During Navigation, 	2 Slots

	Registration form using Reactive Forms + Signals.	
Assignment 4	<ul style="list-style-type: none">• Angular Forms & Validation• Design a registration form using Reactive Forms + Signals.	2 Slots
Assignment 5	<ul style="list-style-type: none">• Angular Services & Dependency Injection• Fetching Data Using Http Client	2 Slots
Assignment 6	<ul style="list-style-type: none">• REST API Integration with Search Filter• Build a complete SPA	2 Slots
Reference Books:		
R1: Angular: Up and Running – Shyam Seshadri (Covers Angular fundamentals, routing, components, and services)		
R2: Learning Angular – Aristeidis Bampakos and Pablo Deeleman (Comprehensive guide including routing, guards, and lazy loading)		
R3: Pro Angular – Adam Freeman (Advanced concepts including routing strategies and application structure)		

<p style="text-align: center;">Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – VI Course Type: DSEC - VI Course Code: CS-356-MJ-P Course Title : Practical Course based on CS-351-MJ-T & CS-353-MJ-T</p>		
Teaching Scheme 4 Hours / week	No. of Credits 2	Examination Scheme IE : 15 marks UE: 35 marks
<p>Prerequisites</p> <ul style="list-style-type: none"> • Understanding of object oriented programming concepts • Basic knowledge of HTML, CSS, and JavaScript. 		
<p>Course Objectives:</p> <ul style="list-style-type: none"> • To implement database connectivity and perform secure data operations using PostgreSQL. • To understand and implement concepts such as JDBC, Servlets, and JSP for building dynamic applications. • To understand the fundamentals of Spring Boot and its role in simplifying the Spring Framework. • To understand the fundamentals of web development using Node.js, Express.js, and React. • To develop RESTful APIs and implement CRUD operations using proper routing and middleware. • To apply frontend concepts like React components, JSX, and hooks for building dynamic interfaces. 		
<p>Course Outcomes:</p> <p>On completion of the course, student will be able to–</p> <p>CO1: Develop database applications using JDBC.</p> <p>CO2: Learn fundamental concepts of web application processing using Servlets.</p> <p>CO3: Understand modern Java frameworks for enterprise application development.</p> <p>CO4: Develop real-world applications using Spring Boot and ORM technologies.</p> <p>CO5: Understand basic concepts of web development and REST APIs.</p> <p>CO6: Create and use APIs using Node.js and Express.js.</p> <p>CO7: Build user interfaces using React components and hooks.</p>		

Guidelines:**Operating Environment :**

- Operating system: Linux
- Editor: Any linux based editor like vi, gedit and Use of IDE – Eclipse / nano / VS Code (Linux version) etc.
- Compiler :javac
- Database :postgresql
- Runtime Environment: Node.js, API Testing Tool: Postman /Thunder
- Frontend Library: React.js
- Backend Framework: Express.js
- API Documentation Tool: Swagger / OpenAPI

Assignment No.	Title	No of Slots (12)
Assignment 1	Collections <ul style="list-style-type: none"> ● To Implement various Interfaces and classes through algorithms. ● To Demonstrate Cursor Objects (Enumeration, Iterator, List Iterator, Comparator) 	01 slot
Assignment 2	Multithreading <ul style="list-style-type: none"> ● To demonstrate multithreading using Thread Synchronization, ● Inter-thread Communication, Thread Priorities. 	01 slot
Assignment 3	Database Programming <ul style="list-style-type: none"> ● To communicate with a database using java. ● To execute queries on tables. 	01 slot
Assignment 4	Servlets <ul style="list-style-type: none"> ● To understand server-side programming. ● Simple steps to create and execute servlets. ● JSP Actions, and Handling data from HTML 	02 slot
Assignment 5	Spring Boot <ul style="list-style-type: none"> ● To create and understand the steps to develop Spring, Spring Boot 	01 slot
Assignment 6	Secure Database Connectivity using Node.js and PostgreSQL <ul style="list-style-type: none"> ● Connect Node.js with PostgreSQL securely using the pg module. ● Perform CRUD operations using parameterized queries for SQL injection prevention. ● Use environment variables and connection pooling for security and performance. 	01 slot
Assignment 7	CRUD API Development using Express.js with Postman and Swagger Documentation	01 slot

	<ul style="list-style-type: none"> • Develop RESTful APIs using Express.js and perform CRUD operations. • Test APIs using Postman and document them using Swagger. 	
Assignment 8	React components, JSX implementation and state management <ul style="list-style-type: none"> • Understanding React Components and JSX Syntax. • Implement JSX , Managing Dynamic UI with React State 	01 slot
Assignment 9	Implementation of React Hooks and Client-Side Routing with API Integration <ul style="list-style-type: none"> • Implement React Hooks Using useState and useEffect • Integrate API with Client-Side routing • Building Multi-Page Applications Using React Router 	01 slot
Assignment 10	Forms, Cookies, Sessions and Authentication in Express.js <ul style="list-style-type: none"> • Create and understand forms, cookies , session • Understand authentication process using express.js 	01 slot
Assignment 11	Authentication and Authorization using JWT and Bcrypt <ul style="list-style-type: none"> • Understand authentication and Authorization using JWT • Understand authentication and Authorization using Bcrypt 	01 slot
Reference Books: R1 : Head First Servlets and JSP – by Bert Bates & Kathy Sierra R2 : Murach’s Java Servlets and JSP – by Joel Murach R3 : Spring Boot in Action – by Craig Walls R4 : Web Development with Node and Express – by Ethan Brown R5 : REST API Design Rulebook by Mark Masse		

<p style="text-align: center;">Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – VI</p> <p>Course Type: Major/Minor Course Code: CS-357-MJ-T</p> <p style="text-align: center;">Course Title : Android Programming</p>		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> ● Concepts of object oriented programming ● Basic knowledge of the java programming. 		
<p>Course Objectives</p> <ul style="list-style-type: none"> ● Students should learn the Android Fundamentals and Android architecture framework. ● Students should understand GUI Design concepts and design Android GUI Layout. ● Students should be able to design visually appealing and intuitive user interfaces for Android apps, using appropriate layouts, widgets, and styles. ● Students should Develop and design event-driven programming with UI Controls. ● Students should understand how to manage data in Android applications, using SQLite databases, shared preferences, and data storage. 		
<p>Course Outcomes</p> <p>On completion of the course, student will be able to–</p> <p>CO1: Understand the fundamentals of mobile application development, the Android operating system, its architecture, core components, and the Android Software Development Kit (SDK).</p> <p>CO2: Understand and use activities, intents and layouts to build functional android applications.</p> <p>CO3: Apply Android UI components, layouts, and design principles to create visually Appealing, responsive, and user-friendly mobile interfaces.</p> <p>CO4: Implement appropriate data storage techniques in Android applications using SQLite databases, Shared Preferences.</p> <p>CO5: Design, develop, test, and deploy complete Android applications independently using Android development tools.</p>		
Course Contents		
Chapter 1	Fundamentals of Android Programming	3 Hours

1.1 Introduction to Android. 1.2 Overview and History of Android 1.3 Need and features of Android. 1.4 Android Architecture.		
Chapter 2	Introduction to Android Environment	3 Hours
2.1 Android Environment 2.1.1 Android IDE - Android Studio, Eclipse, Visual Studio with Xamarin 2.1.2 Android SDK and JDK 2.1.3 Android Tools – Android Development Tools(ADT), Android Virtual Devices(AVD), and Emulator 2.1.4 Dalvik Virtual Machine Vs Java Virtual Machine 2.2 Android App/ Project folder structure 2.3 Resources and Manifest file 2.4 Android Application Hello World		
Chapter 3	Activities, Intents and Layouts	7 Hours
3.1 Introduction to Activity 3.1.1 Activity Life Cycle 3.2 Introduction to Intent 3.2.1 Types of Intents: Implicit, Explicit 3.3 Introduction to Layout and Types 3.3.1 View and View Group 3.3.2 Linear Layout 3.3.3 Relative Layout 3.3.4 Constraint Layout 3.3.5 Frame layout 3.3.6 Table Layout 3.3.7 Grid Layout 3.3.8 Scroll Layout		
Chapter 4	Android User Interface Design: GUI Components, menus and events	9 Hours
4.1 GUI Components 4.1.1 Display Components – TextView, ImageView, AutoComplete TextView 4.1.2 Input Components – EditText, CheckBox, RadioButton, RadioGroup, Spinner 4.1.3 Action Components – Button, ImageButton, ToggleButton 4.3.3 Notification Component - Toast 4.2 Data Display Controls 4.2.1 List View 4.2.2 Grid View 4.3 Dialog Box		

<ul style="list-style-type: none"> 4.3.1 Alert Dialog 4.3.2 Date Picker Dialog 4.3.3 Time Picker Dialog 4.3.4 Custom Dialog 4.4 Menus <ul style="list-style-type: none"> 4.4.1 Option Menu 4.4.2 Context Menu 4.4.3 Popup Menu 4.5 Event driven programming in Android <ul style="list-style-type: none"> 4.5.1 Event Source 4.5.2 Event Listener 4.5.3 Event Handler 		
Chapter 5	Android Components and SQLite Database	8 Hours
<ul style="list-style-type: none"> 5.1 Components in Android: Activity, Services, Broadcast Receiver, Content Provider 5.2 Life Cycle of Android Components: Services, Broadcast Receiver 5.3 SQLite Database <ul style="list-style-type: none"> 5.3.1 Introduction to SQLite Database 5.3.2 SQLite,OpenHelper, and SQLite Database 5.3.3 Creating, Opening and Closing databases 5.3.4 Insert, Update, Delete operations in database 5.3.5 Fetching data from database.

- R1:** Foundations of Software Testing – Dorothy Graham, Erik van Veenendaal, Isabel Evans & Rex Black
- R2:** Software Testing with Bugzilla
- R3:** Bugzilla Guide (Official Manual)
- R4:** FitNesse: For Better Collaboration on Acceptance Tests – Robert C. Martin (Uncle Bob) & Tim Ottinger
- R5:** The Cucumber Book: Behaviour-Driven Development for Testers and Developers – Matt Wynne & Aslak Hellestoy
- R6:** Selenium Testing Tools Cookbook – Unmesh Gundecha
- R7:** Selenium WebDriver Recipes in Python/Java – O'Reilly
- R8:** Performance Testing with JMeter 4 – Bayo Erinle

<p style="text-align: center;">Savitribai Phule Pune University T.Y. B.Sc. (Computer Science) - Sem – VI</p>		
Course Type: Major Elective		Course Code: CS-3511-MJ-T
Course Title: Internet of Things		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> ● Students Should have basic knowledge of Networking, Internet, and Electronics ● Programming Skills: Proficiency in programming languages, particularly C and Python. ● Students are expected to have successfully completed courses in: Embedded Systems and Microcontrollers (Arduino) 		
<p>Course Objectives</p> <ul style="list-style-type: none"> ● Understand the concepts, architecture of Internet of Things. ● Explain IoT hardware platforms, sensors, actuators, and embedded controllers. ● Understand communication models and protocols used in IoT systems. ● Design IoT systems using single board computers. ● Understand IoT data processing, cloud platforms, and security issues. ● Apply IoT concepts to real-world applications and industry use cases. 		
<p>Course Outcomes</p> <p>On successful completion of the course, students will be able to:</p> <p>CO1: Explain IoT concepts, architecture, and enabling technologies.</p> <p>CO2: Identify and interface IoT hardware components using embedded platforms.</p> <p>CO3: Select suitable communication protocols for IoT applications.</p> <p>CO4: Develop basic IoT applications using Raspberry Pi.</p> <p>CO5: Explain data handling, cloud integration, and security concerns in IoT.</p> <p>CO6: Analyze and apply IoT solutions in smart and industrial domains</p>		
Course Contents		
Chapter 1	IoT Fundamentals and System Architecture:	8 Hours
<p>1.1 What is IoT? Definition, Characteristics, Application areas; Things in IoT and smart objects</p> <p>1.2 Overview of Industrial Revolutions: Industry 1.0 to Industry 4.0</p> <p>1.3 IoT Reference Model: 7-layer IoT reference model Published by the IoTWF</p> <p>1.4 IoT enabling Technology (Concept only): WSN, Cloud Computing, Big Data, Embedded systems and boards, communication protocols, User Interfaces</p> <p>1.5 WSN: Architecture, types of nodes</p> <p>1.6 IoT Levels: Level-1 to level-5</p> <p>1.7 IoT Distinction: IoT Versus Embedded Systems, IoT Versus WSN</p>		
Chapter 2	Introduction to Sensor, actuation, Hardware Platforms & Cloud Integration:	8 Hours

2.1 Sensors: Classification and examples 2.2 Actuators: Concept and Types of Actuators 2.3 Hardware Platform in IoT: 2.3.1 Introduction Raspberry Pi, Architecture Overview 2.3.2 Operating System for Raspberry Pi 2.3.3 Installation & configuration 2.3.4 GPIO architecture 2.3.5 Interfacing of LED, Switch and its Programming using Python 2.4 Cloud Computing for IoT: 2.4.1 Need and advantages of Cloud integration in IoT 2.4.2 Cloud Deployment Models: Public, Private, and Hybrid 2.4.3 Cloud Services: SaaS, PaaS, and IaaS 2.4.4 IoT cloud platforms (Overview)		
Chapter 3	IoT Communication Protocols and Networking technologies:	7 Hours
3.1 IoT Protocols: MQTT, CoAP, XMPP, 6LoWPAN 3.2 IoT communication technologies: Zigbee, Z-Wave, NFC, Wi-Fi 3.3 Networking technologies: 3.3.1 Low power local area networking (LPLAN) 3.3.2 Low power wide area networking (LPWAN) 3.3.3 Comparative study of LoRa, Sigfox NB-IoT, LTE Cat -M		
Chapter 4	IoT Challenges, Security and Real-World Application:	7 Hours
4.1 Challenges in IoT 4.2 Privacy and Data protection issues; 4.3 Case Study: 4.3.1 Smart Home 4.3.2 Smart Agricultural 4.3.3 Industrial IoT (IIoT) 4.3.4 Integration of IoT with AI

<p style="text-align: center;">Savitribai Phule Pune University, Pune T. Y. B. Sc. (Computer Science) - Sem – VI Course Type: Major Elective Course Code: CS-3512-MJ-P Course Title: Lab Course based on CS-3511-MJ-T</p>		
Teaching Scheme 02 Hours / Week	No. of Credits 2	Examination Scheme IE: 15 Marks UE: 35 Marks
<p>Prerequisites</p> <ul style="list-style-type: none"> • Basic knowledge of Communication Protocols and Sensors • Knowledge of Microcontroller basics (Arduino/8051) • Knowledge of programming (C/Python) and wireless communication 		
<p>Course Objectives</p> <p>The objectives of this laboratory course are to:</p> <ul style="list-style-type: none"> • Understand the architecture and working of Raspberry Pi 4, including GPIO interfacing and OS setup. • Develop practical skills in interfacing sensors and actuators such as LED, push button, temperature sensor, ultrasonic sensor, relay, and servo motor. • Implement wireless communication protocols like Wi-Fi, Bluetooth, and MQTT for IoT applications. • Integrate IoT devices with cloud platforms for real-time data monitoring, visualization, and storage. • Design and develop real-world IoT applications such as smart home, agriculture, health monitoring, and industrial automation systems. • Enhance problem-solving, system integration, and project development skills through hands-on experiments and activity-based learning. 		
<p>Course Outcomes (Practical)</p> <p>On completion of the laboratory course, students will be able to:</p> <p>CO1: Understand the architecture of Raspberry Pi 4, configure Raspberry Pi OS.</p> <p>CO2: Interface digital and analog sensors (DHT11/DHT22, LDR, Ultrasonic, PIR) and actuators (LED, Relay, Servo Motor) using GPIO pins and develop basic control programs.</p> <p>CO3: Configure Wi-Fi and Bluetooth communication and implement HTTP and MQTT protocols using tools like Mosquitto for IoT data exchange.</p> <p>CO4: Upload, store, and visualize sensor data on cloud platforms such as Thing Speak and develop dashboards using Node-RED.</p> <p>CO5: Design and implement complete IoT-based application systems such as smart home automation, smart agriculture, and health monitoring solutions.</p> <p>CO6: Prepare technical documentation and project reports based on practical implementation or industrial field visits.</p>		
Course Contents		

SECTION - I (12 Experiments)		
Group A	Sensor & Actuator Interfacing using Raspberry Pi 4 (Any 3)	3 Slots
1. Interfacing LED with Raspberry Pi (Digital Output). 2. Interfacing Push Button with Raspberry Pi (Digital Input). 3. Interfacing Temperature & Humidity Sensor (DHT11/DHT22). 4. Interfacing PIR Motion Sensor and buzzer alert system.		
Group B	IoT Communication (Wi-Fi / Bluetooth) (Any 3)	3 Slots
5. Wi-Fi configuration on Raspberry Pi and IP address identification. 6. Implement MQTT Publish–Subscribe using Mosquitto. 7. Sensor data uploaded to the cloud using MQTT protocol. 8. Bluetooth communication between Raspberry Pi and Mobile.		
Group C	Cloud Integration for IoT (Any 3)	3 Slots
9. Upload temperature sensor data to ThingSpeak Cloud. 10. Real-time data visualization on cloud dashboard. 11. Store and retrieve IoT data using cloud services (IaaS / PaaS concept). 12. Node-RED installation and dashboard creation on Raspberry Pi.		
Group D	IoT Application Based Experiments (Any 3)	3 Slots
13. Smart Home Automation using Wi-Fi and Relay. 14. Smart Agriculture System (Soil moisture + Motor control). 15. Smart Health Monitoring (Temperature + Pulse sensor). 16. Industrial Parameter Monitoring using Cloud Dashboard.		
SECTION-II: ACTIVITY (Any ONE Equivalent to 3 Experiments)		
1. Electronics Hobby Project – Design and develop a small electronics-based project and submit a report. 2. Field Visit Report – Visit an electronics industry and submit a detailed report.		
Laboratory Requirements		
<ul style="list-style-type: none"> • Monitor, Keyboard, Mouse, Active Internet Connection • Raspberry Pi boards with HDMI cable • Breadboard, jumper wires • Sensors, Actuators • Power supply and basic electronic components

Savitribai Phule Pune University T.Y.B.Sc. (Computer Science) - Sem – VI		
Course Type: VSC	Course Code: CS-371-VSC-P	
Course Title: Agile Process		
Teaching Scheme 04 Hours/Week	No. of Credits 2	Examination Scheme IE : 15 Marks UE: 35 Marks
Prerequisites <ul style="list-style-type: none"> ● Fundamental principles of software engineering ● Programming basic principles, basic Git ideas and core database knowledge. 		
Course Objectives <ul style="list-style-type: none"> ● To learn the core values, principles, and popular frameworks followed in the software industry. ● To implement Agile requirements engineering through the use of user stories, acceptability criteria, and setting priorities. ● To incorporate industry-standard tools for Agile planning, collaboration, and version control. ● To carryout Agile estimation, sprint planning, review, and retrospective activities effectively. ● To develop a functional product incrementally while following to quality standards such as testing and code review. 		
Course Outcomes On completion of the course, student will be able to– <ul style="list-style-type: none"> CO1: Understand the Agile Manifesto, its fundamental principles, and the key differences between plan driven and Agile development methodologies. CO2: Understand and create a product backlog utilizing user stories, acceptability criteria, and prioritization methods. CO3: Utilize Scrum practices and roles to effectively plan and execute iterations for a small team project. CO4: Utilize Kanban boards, work-in-progress limits, and performance metrics to enhance workflow efficiency and delivery. CO5: Perform estimation, monitoring, and reporting utilizing burndown/burnup charts and velocity metrics. CO6: Perform quality assurance practices including the development of test cases, foundational automated testing, continuous integration, and peer review. 		
Operating Environment / Tools (Suggested) <ul style="list-style-type: none"> ● Operating System: Windows/Linux 		

- Version Control: Git and GitHub/GitLab
- Agile Tool: Jira / Azure DevOps Boards (any one)
- Documentation: Google Docs / Markdown
- Communication: MS Teams / Slack (optional)
- CI (basic): GitHub Actions (optional)
- Testing: JUnit / PyTest / Selenium (as applicable)

Course Contents

Assignment 1	Agile Fundamentals and Team Setup	2 Slots
<p>Topic Name: To learn the concepts of Agile and establish an effective team collaboration workflow.</p> <p>Tools: GitHub and Markdown documentation.</p> <p>Tasks:</p> <ol style="list-style-type: none"> a. Analyze and provide a summary of the Agile Manifesto and its 12 principles, including relevant real-world examples. b. Assemble a team of three to five students and choose a mini-project domain (web, app, or API). c. Setup a Git repository, define a branching strategy (main and feature branches), and prepare a README file. d. Set up an Agile board featuring columns: Backlog, To Do, In Progress, Review, and Done. <p>Expected Outputs:</p> <ul style="list-style-type: none"> • Summary document on Agile methodology (1–2 pages). • Link to the project repository accompanied by a README file. • Screenshot or export of the board. 		
Assignment 2	User Stories and Acceptance Criteria	1 Slot
<p>Topic Name: Create user stories and develop specific acceptance criteria for requirements.</p> <p>Tools and Artefacts: Agile board tool, Documentation/Markdown</p> <p>Tasks:</p> <ol style="list-style-type: none"> a. Identify stakeholders and create 6–10 user stories using the format: As a , I want , so that . b. Create acceptance criteria utilizing the Given-When-Then framework for a minimum of six stories. c. Design the Definition of Ready (DoR) and Definition of Done (DoD) for the team. <p>Expected Outputs:</p> <ul style="list-style-type: none"> • User story backlog of 6 to 10 stories. • Document outlining acceptance requirements. • Definition of Ready (DoR) and Definition of Done (DoD) checklist. 		
Assignment 3	Backlog Prioritization and Release Planning	1 Slot
<p>Topic name: Priorities backlog and prepare a brief release utilizing Agile methodologies.</p>		

Tools/Artifacts: Agile board application, Spreadsheet/Documents

Tasks:

- Priorities stories utilizing either MoSCoW or WSJF methodology.
- Develop a clear release strategy for 2–3 sprints, each last 1–2 weeks.
- Establish the scope of the MVP and develop a roadmap defining key milestones.

Expected Outputs:

- Prioritized backlog accompanied by justification.
- Document outlining the release plan and MVP scope.
- Overview of the roadmap

Assignment 4	Agile Estimation and Sprint Planning	1 Slot
---------------------	---	---------------

Topic Name: Evaluate work and execute sprint planning for Sprint

Tools/Artifacts: Planning poker (cards/application), Agile board tool

Tasks:

- Evaluate user stories utilizing story points (Planning Poker).
- Split chosen stories into tasks and designate responsible parties.
- Establish the Sprint Goal and Sprint Backlog for Sprint 1.
- Establish sprint capacity and confirm commitments.

Expected Outputs:

- Table of story point estimates.
- Sprint 1 strategy (goal, backlog, assignments).
- Document of capacity and commitment.

Assignment 5	Sprint Execution with Daily Scrum and Tracking	2 Slots
---------------------	---	----------------

Evaluate work and execute sprint planning for Sprint 1.

Tools/Artifacts: Planning poker (cards/application), Agile board tool

Tasks:

- Evaluate user stories utilizing story points (Planning Poker).
- Split chosen stories into tasks and designate responsible parties.
- Establish the Sprint Goal and Sprint Backlog for Sprint 1.
- Establish sprint capacity and confirm commitments.

Expected Outputs:

- Table of story point estimates.
- Sprint 1 strategy (goal, backlog, assignments).
- Document of capacity and commitment.

Assignment 6	Testing and Quality Practices in Agile	2 Slots
---------------------	---	----------------

Topic name: Integrate testing into sprint workflow and ensure product quality.

Tools: Unit testing framework, Continuous Integration (optional)

Tasks:

- Develop a minimum of six-unit tests or API tests in accordance with the acceptance criteria.
- Develop test cases and align them with user stories.

- c. Optional: Set up a fundamental CI pipeline to execute tests upon submit.
- d. Conduct a basic code review checklist focused on maintainability.

Expected Outputs:

- Test case documentation and corresponding mappings.
- Verify code within the repository.
- Continuous Integration workflow file (if applicable).

Assignment 7	Sprint Review and Demo	2 Slots
---------------------	-------------------------------	----------------

Topic name: Demonstrate working increment and collect feedback.

Tools: Slides (optional), Demonstration video (optional), Agile board

Tasks:

- a. Prepare a sprint demonstration of the completed stories (working increment).
- b. Gather feedback from peers and the instructor, and document the corresponding action items.
- c. Revise the backlog in accordance with feedback and adjust priorities accordingly.

Expected Outputs:

- Documentation of sprint review notes and a comprehensive feedback record.
- Revised backlog screenshot.
- Demonstration evidence (screenshots/video link).

Assignment 8	Sprint Retrospective and Continuous Improvement	1 Slot
---------------------	--	---------------

Topic name: Reflect on process and define improvements for next sprint.

Tools: Slides (optional), Demonstration video (optional), Agile board

Tasks:

- a. Execute a retrospective utilising the Start-Stop-Continue framework or the 4Ls (Liked, Learnt, Lacked, Longed for).
- b. Recognize a minimum of three enhancements and translate them into executable tasks.
- c. Identify a singular process metric for enhancement (cycle time, faults, throughput).

Expected Outputs:

- Retrospective analysis.
- Action items for improvement are on the agenda.
- Definition of the metric and its baseline value.
