## **B.Sc. (Data Science)**

### **Semester-V**

**Savitribai Phule Pune University**  
**B.Sc. Data Science (2024 Pattern)**  
**Sem-V**

**DS-301-MJ-T : Data Visualization and Modelling**

<b>No. of Credits:</b> 4	<b>Teaching Scheme</b> Theory: 4 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 30 Marks End Semester : 70 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● Fundamental understanding of programming concepts using Python</li> <li>● Basic knowledge of statistics</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>● To introduce fundamental concepts of data visualization and data handling</li> <li>● To develop skills in loading, cleaning, and preprocessing data using Python libraries</li> <li>● To provide knowledge of exploratory data analysis techniques for understanding data</li> <li>● To build a foundation in predictive modelling and machine learning algorithms</li> <li>● To enable students to apply data science techniques to real-world datasets</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, student will be able to – CO1: Explain the need, importance, and applications of data visualization techniques CO2: Load, clean, preprocess, and visualize data using Python-based data science libraries CO3: Perform exploratory data analysis and interpret data patterns and correlations CO4: Build, evaluate, and interpret regression and classification models for prediction CO5: Apply unsupervised learning and association rule mining techniques to analyze datasets.			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Introduction to Data Visualization and Data Handling</b>	<b>11</b>	<b>CO1, CO2</b>
<b>1.1 Introduction to Data Visualization</b> Need for Data Visualization, Importance of Data Visualization, Applications of Data, Visualization, Challenges of Data Visualization.			
<b>1.2 Data Loading and Preprocessing</b> Loading datasets from CSV and Excel files, Data loading using Pandas, Data cleaning techniques, Data preprocessing methods.			
<b>1.3 Introduction to Data Science Libraries</b> NumPy, Pandas, Matplotlib, Seaborn, Plotly, SciPy, Statsmodels, Scikit –learn, XGBoost			
<b>1.4 Basic Charts and Graphs</b> Bar Chart ,Line Chart, Histogram, Pie Chart, Scatter Plot, Spike Plot			

<b>2</b>	<b>Advanced Data Visualization and Exploratory Data Analysis</b>	<b>10</b>	<b>CO1, CO2, CO3</b>
<p><b>2.1 Advanced Visualization Techniques</b> Box Plot / Box Whisker Plot, Violin Plot, Joint Plot, Pair Plot, Heatmap, Word Cloud, Bubble Chart, Area Chart, Subplots</p> <p><b>2.2 Exploratory Data Analysis (EDA)</b> Concept and importance of EDA, Identifying data patterns and trends, Correlation analysis using visualization, Visual techniques for exploratory analysis.</p>			
<b>3</b>	<b>Predictive Modelling and Machine Learning</b>	<b>20</b>	<b>CO3, CO4</b>
<p><b>1.1 Introduction to Machine Learning</b> Definition of Machine Learning, Types of Machine Learning (Supervised Learning, Unsupervised Learning, Reinforcement Learning), Applications of Machine Learning.</p> <p><b>1.2 Introduction to Statistical Modelling</b> Model building process, Training and testing data concepts.</p> <p><b>1.3 Simple Linear Regression</b> Model formulation, Assumptions of Linear Regression, Interpretation of regression coefficients.</p> <p><b>1.4 Multiple Linear Regression</b> Model formulation, Interpretation of regression coefficients, Multicollinearity</p> <p><b>1.5 Model Evaluation for Regression Models</b> R-square, Adjusted R-square, Mean Absolute Error (MAE), Mean Squared Error (MSE), Root Mean Squared Error (RMSE), Residual analysis, Interpretation and comparison of regression models.</p> <p><b>1.6 Regularization Techniques</b> Ridge Regression, Lasso Regression.</p> <p><b>1.7 Practical Applications of Regression Models</b></p>			
<b>4</b>	<b>Classification and Ensemble Learning</b>	<b>10</b>	<b>CO4</b>
<p><b>1.1 Classification Algorithms</b> Logistic Regression, K -Nearest Neighbors (KNN), Decision Tree Classifier, Naïve Bayes Classifier.</p> <p><b>4.2 Ensemble Learning Techniques</b> Concept of Bagging and Boosting, Random Forest, Gradient Boosting, Ada Boost.</p> <p><b>4.3 Model Evaluation Techniques for Classification</b> Confusion Matrix, Accuracy, Precision, Recall, F1 Score, ROC Curve and AUC, Interpretation and comparison of classification models.</p> <p><b>4.4 Model Performance Issues</b> Bias–Variance Trade-off, Overfitting, Underfitting.</p>			
<b>5</b>	<b>Unsupervised Learning and Association</b>	<b>9</b>	<b>CO5</b>

	<b>Analysis</b>		
<p><b>5.1 Introduction to Unsupervised Learning</b></p> <p><b>5.2 Clustering Techniques</b>          Concept of clustering, Distance and similarity measures, K-Means Clustering, Applications of clustering, Hierarchical Clustering, DBSCAN.</p> <p><b>5.3 Dimensionality Reduction</b>          Principal Component Analysis (PCA).</p> <p><b>5.4 Association Rule Mining</b>          Concept of Association Rules, Apriori Algorithm, Market Basket Analysis.</p>			
<b>Reference Books</b>			
<ol style="list-style-type: none"> <li>1. Book1 : Han, Kamber &amp; Pei, <i>Data Mining: Concepts and Techniques</i></li> <li>2. Book2 : Learning Python, 4<sup>th</sup> Edition by Mark Lutz</li> <li>3. Book3: Data Science Essentials in Python: Collect, Organize, Explore, Predict, Value.              Dmitry Zinoriev, The Pragmatic Programmers LLC, 2016</li> <li>4. Book4: James et al., <i>An Introduction to Statistical Learning</i></li> <li>5. Book5: Géron, <i>Hands-On Machine Learning with Scikit-Learn, Keras &amp; TensorFlow</i></li> </ol>			

**Savitribai Phule Pune University**  
**B.Sc. Data Science (2024 Pattern)**  
**Sem-V**

**DS-302-MJ-T: R Programming**

<b>No. of Credits: 2</b>	<b>Teaching Scheme</b> Theory: 2 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester: 35 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>• Basic knowledge of Statistics</li> <li>• Basic knowledge of Computer Software</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>• Understand R basics, set up R Studio, and customize the environment</li> <li>• Develop proficiency in using R data structures: vectors, matrices, lists, and data frames</li> <li>• Use R – software to find the summary statistics.</li> <li>• Compute probabilities of the distributions using R – software.</li> <li>• Represent statistical data by diagrammatically and graphically using R-software</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, student will be able to - CO1: Apply basic R programming commands and data management techniques using R/RStudio. CO2: Create and interpret diagrammatic and graphical representations for data visualization in R CO3: Analyze measures of central tendency, dispersion, and perform matrix computations in R CO4: Summarize datasets using frequency distributions and advanced statistical summaries. CO5: Perform correlation and regression analysis to study relationships between variables. CO6: Simulate and analyze discrete and continuous probability distributions and conduct hypothesis testing using R.			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Introduction to R Programming</b>	<b>5</b>	<b>CO1</b>
1.1 Introduction to R, History, Features and Applications 1.2 Installing R and RStudio, Running Simple Programs 1.3 Data Types, Variables, Operators and Type Conversion 1.4 Meaning of package, base (standard package) package, to install a package, to load a package, to delete a package, learning about a package, getting help. 1.5 Operators & expressions in R – Arithmetic, logical, relational operators & expressions, precedence rule.			
<b>2</b>	<b>Working with Vectors</b>	<b>5</b>	<b>CO1, CO3</b>
2.1 Vectors: creating a vector, modifying a vector, deleting a vector. 2.2 Working with vectors: the functions to be discussed-c(), rep(), rev(), sort(), diff(), max(), min(), colon operator(:), seq(), scan(), cut(), cat(), table(), which(), unique(), is.vector(), as.vector(), print() 2.3 Mathematical functions: abs(), sqrt(), ceiling(), floor(), trunc(), log(), log10(), exp(), sin(),			

<p>cos(), tan(), atan(), sign(), round(), range(), length(), prod(), sum(),.</p> <p>2.4 Character functions: nchar(), substr(), grep(), sub(), paste(), strsplit(), toupper(), tolower().</p> <p>Meaning of data frame, creation of data frame, modifying a data frame, deleting data frame, extracting elements from a data frame, use of \$ sign. Functions to be discussed: subset(), transform(), attach(), detach(), with(), data.entry(), edit(), is.data.frame(), as.data.frame()</p>			
<b>3</b>	<b>Matrix Operations</b>	<b>4</b>	<b>CO1, CO3</b>
<p>3.1 Creating a matrix, scalar multiplication of matrix, matrix addition, subtraction and multiplication, transpose of a matrix, inverse of a matrix, solving system of linear equations, finding row and column sums and means.</p> <p>3.2 The functions to be discussed: matrix(), colMeans(), colSums(), rowMeans(), rowSums(), solve(), t(), diag(), is.matrix(), as.matrix()</p>			
<b>4</b>	<b>Data Handling and Visualization</b>	<b>5</b>	<b>CO2, CO4</b>
<p>4.1 Reading and Writing Data Files, Data Preprocessing and Cleaning</p> <p>4.2 Packages used for Data Visualization</p> <p>4.3 Diagrams - Simple bar diagram, Subdivided bar diagram, multiple bar diagram, Pie diagram, Stem and leaf diagram</p> <p>4.4 Graphs - Boxplot for one and more than one variables, spike plot, histogram for both equal and unequal class intervals, frequency polygon, ogive curves</p>			
<b>5</b>	<b>Statistical Analysis and Predictive Modelling</b>	<b>6</b>	<b>CO3, CO5</b>
<p>5.1 Measures of Central tendency - mean, mode, median, Partition values - quartiles, deciles, percentiles, geometric mean and harmonic mean.</p> <p>5.2 Dispersion: variance, standard deviation, coefficient of variation, mean deviation.</p> <p>5.3 Summary Statistics using fivenum() and summary() for quick data summaries.</p> <p>5.4 Skewness: Bowley's coefficient and Karl Pearson's coefficient of skewness.</p> <p>5.5 Moments: Computations of raw and central moments, measures of skewness and kurtosis.</p> <p>5.6 Correlation and Regression Analysis</p>			
<b>6</b>	<b>Probability Distributions and Hypothesis Testing</b>	<b>5</b>	<b>CO6</b>
<p>6.1 Discrete Probability Distributions</p> <p>a) Simulating data from Bernoulli, Binomial, and Poisson distributions.</p> <p>b) Calculating probabilities and percentiles using dbinom, pbinom, dpois, etc.</p> <p>6.2 Continuous Probability Distributions</p> <p>a) Visualization of normal, Chi square, t-distribution, f-distribution using R</p> <p>b) Applications of standard normal distribution (Z-scores)</p> <p>6.3 Hypothesis Testing : t test, Chi square test, f Test for testing variances, One Way ANOVA</p>			
<b>Reference Books</b>			
<p>1. Book1 : Richard Cotton, "Learning R", SPD O'Reilly Publications</p> <p>2. Book2 : Gupta, S. C. and Kapoor, V. K. (1997). Fundamentals of Applied Statistics, Third Edition, Sultan Chand and Sons Publishers, New Delhi.</p>

### Sem-V

#### DS-303-MJ-T: Foundations of Artificial Intelligence

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Theory: 2 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation:15 Marks End Semester: 35 Marks	
<b>Prerequisites</b>			
<ul style="list-style-type: none"> <li>Foundational knowledge of programming, data structures, discrete mathematics, probability and statistics, and data science.</li> </ul>			
<b>Objectives</b>			
<ul style="list-style-type: none"> <li>To introduce students to the fundamental concepts, scope, and evolution of Artificial Intelligence.</li> <li>To develop understanding of problem solving, knowledge representation, reasoning, and learning in AI.</li> <li>To bridge Data Science foundations with Artificial Intelligence concepts.</li> <li>To create awareness of ethical, social, and practical implications of AI.</li> </ul>			
<b>Course Outcomes</b>			
On Completion of this course, student will be able to –			
<ul style="list-style-type: none"> <li><b>CO1:</b> Understand the basic concepts, goals, and applications of Artificial Intelligence.</li> <li><b>CO2:</b> Formulate problems and analyze AI-based problem-solving techniques.</li> <li><b>CO3:</b> Describe knowledge representation and logical reasoning mechanisms.</li> <li><b>CO4:</b> Understand learning paradigms and the role of expert systems in Artificial Intelligence.</li> <li><b>CO5:</b> Analyze ethical issues and future trends in Artificial Intelligence.</li> </ul>			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Introduction to Artificial Intelligence</b>	<b>5</b>	<b>CO1</b>
<ul style="list-style-type: none"> <li>What is Artificial Intelligence?</li> <li>Scope and importance of Artificial Intelligence</li> <li>Brief History and Evolution of AI</li> <li>Types of Artificial Intelligence</li> <li>AI Problems and Basic Concepts</li> <li>Application of Artificial Intelligence <ul style="list-style-type: none"> <li>Game Playing</li> <li>Natural Language Processing</li> <li>Computer Vision</li> <li>Speech Processing</li> </ul> </li> </ul>			
<b>2</b>	<b>Problem Solving Techniques in Artificial Intelligence</b>	<b>5</b>	<b>CO2</b>
<ul style="list-style-type: none"> <li>Problem definition and problem space</li> <li>Characteristics of AI Problem</li> <li>State space representation</li> <li>Production systems</li> <li>Problem reduction</li> </ul>			

<ul style="list-style-type: none"> <li>• Issues in the Design of Search Programs</li> </ul>			
<b>3</b>	<b>Knowledge Representation</b>	<b>6</b>	<b>CO3</b>
<ul style="list-style-type: none"> <li>• Role of knowledge in Artificial Intelligence</li> <li>• Knowledge representation and mapping</li> <li>• Approaches to knowledge representation</li> <li>• Issues in knowledge representation</li> <li>• Rule-based systems</li> <li>• Procedural versus Declarative knowledge</li> </ul>			
<b>4</b>	<b>Logic-Based Representation and Reasoning under Uncertainty</b>	<b>8</b>	<b>CO3</b>
<ul style="list-style-type: none"> <li>• Propositional Logic</li> <li>• Predicate Logic:</li> <li>• Representing facts and relationships</li> <li>• Modus Ponens</li> <li>• Inference techniques:</li> <li>• Resolution</li> <li>• Natural Deduction</li> <li>• Forward chaining and Backward chaining</li> <li>• Structured knowledge representation:</li> <li>• Semantic Networks</li> <li>• Frames</li> <li>• Reasoning under uncertainty:</li> <li>• Probabilistic reasoning (conceptual overview)</li> <li>• Certainty factors</li> <li>• Comparison of logical and probabilistic reasoning</li> </ul>			
<b>5</b>	<b>Learning and Expert Systems</b>	<b>4</b>	<b>CO4</b>
<p><b>Learning in Artificial Intelligence</b></p> <ul style="list-style-type: none"> <li>• Concept of learning in AI</li> <li>• Types of learning: <ul style="list-style-type: none"> <li>Rote learning</li> <li>Learning by taking advice</li> <li>Learning in problem solving</li> <li>Learning by induction</li> <li>Explanation-based learning</li> </ul> </li> </ul> <p><b>Expert Systems</b></p> <ul style="list-style-type: none"> <li>• Need and justification of expert systems</li> <li>• Components of an expert system</li> <li>• Limitations of expert systems</li> </ul>			
<b>6</b>	<b>Ethical Issues in AI</b>	<b>2</b>	<b>CO5</b>

- Ethical challenges in AI
- Bias and fairness in AI systems
- Transparency and Explainability
- Privacy and data protection
- Social impact of Artificial Intelligence
- Responsible and trustworthy AI

**DS-304-MJ-P: Lab Course on DS-301-MJ-T (Data Visualization and Modelling)**

<b>No. of Credits: 2</b>	<b>Teaching Scheme</b> Practical : 04 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● Basic knowledge of Statistics</li> <li>● Basic knowledge of Python</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>● To introduce essential libraries for data analysis and visualization.</li> <li>● To develop practical skills in data loading, data cleaning, preprocessing, and exploratory data analysis using Python.</li> <li>● To understand and apply various data visualization techniques for effective graphical representation of data.</li> <li>● To introduce basic data modelling techniques such as regression, classification, and clustering using Python.</li> <li>● To enable students to build, evaluate, and interpret simple data models for real-world datasets.</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, student will be able to - CO1: Implement Python programs for data loading, preprocessing, visualization and exploratory data analysis. CO2: Create effective data visualizations using Python libraries for graphical representation of data. CO3: Apply statistical techniques and basic data modelling methods to real-world datasets. CO4: Build, evaluate, and interpret simple data models for analysis and prediction. CO5: Integrate visualization and modelling results to support data-driven decision making.			
<b>Operating Environment:</b> <ul style="list-style-type: none"> <li>● Windows (Windows 10/11)</li> <li>● Linux (Ubuntu, Fedora, Debian, etc.)</li> <li>● macOS (Latest versions)</li> </ul> Python Programs can be executed using: <ul style="list-style-type: none"> <li>● VS Code</li> <li>● Jupyter Notebook</li> </ul>			
<b>Sr No.</b>	<b>Name of Practical</b>	<b>Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Overview of Python Programming Environment and Data Visualization Libraries</b>	<b>12</b>	<b>CO1</b>
Overview of Python environment, installation and use of Jupyter Notebook. Introduction to data visualization libraries: NumPy, Pandas, Matplotlib, ggplot2 and Seaborn			

<b>2</b>	<b>Data Cleaning, and Preprocessing using Pandas</b>	<b>4</b>	<b>CO1</b>
Loading datasets from CSV/Excel files. Handling missing values, data type conversion, filtering, sorting, and data preprocessing			
<b>3</b>	<b>Basic and Advanced Data Visualization</b>	<b>8</b>	<b>CO2</b>
Creating basic plots such as line plot, bar chart, histogram, and scatter plot using data visualization libraries such as Matplotlib. Advanced visualizations including boxplot, joint plot, violin plot, pair plot, word cloud, bubble chart, area chart, pie chart, and heatmap.			
<b>4</b>	<b>Exploratory Data Analysis (EDA) and Correlation Analysis with Visualization</b>	<b>12</b>	<b>CO1, CO2</b>
Performing Exploratory Data Analysis to understand data patterns and trends. Correlation analysis using correlation matrix and visualization using heatmaps.			
<b>5</b>	<b>Simple Linear Regression</b>	<b>8</b>	<b>CO3, CO4</b>
Implementation of Simple Linear Regression model. Interpretation of regression coefficients, analysis of residual plots and visualization of regression line.			
<b>6</b>	<b>Multiple Linear Regression and Model Evaluation</b>	<b>8</b>	<b>CO4, CO5</b>
Building Multiple Linear Regression model using Python. Evaluation of model performance using metrics such as $R^2$ , MAE, MSE, and RMSE.			
<b>7</b>	<b>Logistic Regression and K-Means Clustering</b>	<b>8</b>	<b>CO4, CO5</b>
Building Logistic Regression model using Python for classification. Application of K-Means Clustering technique for grouping unlabeled data. Selection of appropriate number of clusters and visualization of clusters using Python.

**DS-305-MJ-P : Lab Course on DS-302-MJ-T (R Programming)**

<b>No. of Credits: 2</b>	<b>Teaching Scheme</b> Practical : 04 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● Basic knowledge of Statistics</li> <li>● Basic knowledge of computers and data handling</li> </ul>		
<b>Objectives</b> <ul style="list-style-type: none"> <li>● To familiarize students with the R programming environment and RStudio</li> <li>● To develop practical skills in handling data using R data structures</li> <li>● To perform statistical computations using R software</li> <li>● To visualize data using diagrams and graphical techniques in R</li> <li>● To apply R programming for statistical analysis, probability distributions, and hypothesis testing</li> </ul>		
<b>Course Outcomes</b> On Completion of this course, student will be able to - CO1: Use basic R commands, functions, and packages for data handling and computation CO2: Create and interpret diagrammatic and graphical representations of data using R CO3: Compute and analyze measures of central tendency, dispersion, and matrix operations using R CO4: Perform summary statistics, skewness, kurtosis, and correlation analysis using R CO5: Apply R programming to probability distributions, hypothesis testing, regression, and ANOVA		
<b>List of Practical Assignments:</b>		
<b>Practical No.</b>	<b>Title of Practical</b>	<b>Hours</b>
1	Introduction to R and RStudio: Writing and executing basic R programs, understanding R environment and packages	4
2	Working with R Data Types and Operators: Variables, type conversion, arithmetic, logical and relational operations	4
3	Creating and Manipulating Vectors in R using built-in functions	4
4	Mathematical and Character Functions in R	4
5	Creating and Managing Data Frames: Data extraction, modification, and summary using R	8

6	Matrix Operations in R: Matrix creation, arithmetic operations, transpose, inverse, and solving linear equations	8
7	Diagrammatic Representation of Data using R (Bar diagrams, Pie charts, Stem-and-Leaf)	4
8	Graphical Representation of Data using R (Histogram, Boxplot, Frequency Polygon, Ogive Curves)	4
9	Measures of Central Tendency and Dispersion using R	4
10	Summary Statistics, Skewness, and Kurtosis Computation using R	4
11	Correlation and Regression Analysis using R	4
12	Probability Distributions and Hypothesis Testing using R (Binomial, Normal, t-test, Chi-square test, ANOVA)	8
<b>Reference Books</b>		
<ol style="list-style-type: none"> <li>2. Book1 : Introduction to Probability and Statistics Using R by G. Jay Kerns</li> <li>3. Book2 : An R Companion to Linear Statistical Models by Christopher Hay-Jahans</li> <li>4. Book3 : Introductory Statistics with R, Second Edition by Peter Dalgaard, Springer</li> </ol>

**DS-310-MJ-T: Business Analytics**

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Theory: 02 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● Basic Mathematical operations</li> <li>● Fundamental understanding of Data Science workflows</li> <li>● Knowledge of problem solving tools like algorithms, flowcharts and pseudo codes will be an added advantage</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>● To acquaint students with the process of translating business problems into analytical queries</li> <li>● To introduce data mining processes (CRISP/SEMMA) and data preparation techniques</li> <li>● To identify the nature of business data across different organizational domains</li> <li>● To apply advanced statistical tools for trend analysis and prediction.</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, student will be able to - <b>CO1:</b> Identify types of analytics (Descriptive to Prescriptive) and translate vague business problems into data queries. <b>CO2:</b> Prepare data for analysis using cleaning tools while following ethical and privacy laws (GDPR/DPDP). <b>CO3:</b> Perform business benchmarking and value-based profiling using Pareto (80/20) and ABC analysis. <b>CO4:</b> Measure relationships between business drivers using Correlation and Regression models. <b>CO5:</b> Predict future trends using Time Series forecasting and evaluate accuracy with error metrics (MAE/MSE).			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>INTRODUCTION</b>	<b>05</b>	<b>CO 1</b>
<p><b>1.1</b> Definition of analytics, Evolution of analytics, Concept of analytics, Types of Analytics.</p> <p><b>1.2</b> The Growing Role of Business Analytics, the distinction between Business Analysis (Process), BI (Reporting), and Data Science (Algorithms).</p> <p><b>1.3</b> Applications of Business Analytics: Marketing and Sales, Human Resource, Healthcare, Product Design, Service Design, finance, operation, Customer Service and Support.</p> <p><b>1.2</b> Categorization of Analytical methods and models: - Descriptive (What happened?), Diagnostic (Why?), Predictive (What will happen?), and Prescriptive (How to make it happen?).</p> <p><b>1.3</b> The process of translating a vague business problem into a structured data query.</p> <p><b>1.4</b> The analytical decision-making process vs. intuitive decision-making vs. evidence-based decision making.</p>			

<b>2</b>	<b>DATA BASES, DATA WAREHOUSING</b>	<b>05</b>	<b>CO 2</b>
<p><b>2.1</b> Importance of data in business analytics, Differences between data, information and knowledge, Quality of data.</p> <p><b>2.2</b> Types of Data Sources- Structured Vs. Semi structured Vs. Unstructured data,</p> <p><b>2.3</b> Data Warehouse Vs. Databases, Relational Database Vs. Non-Relational Database, RDBMS Data structures, and Columnar Data structures.</p> <p><b>2.4</b> 5Vs (Volume, Velocity, Variety, Veracity, Value) of Big Data, Big Data Collection and Ethics.</p> <p><b>2.5</b> Ethical collection methods, and data privacy laws (GDPR/Digital Personal Data Protection basics).</p> <p><b>2.6</b> Data preparation for knowledge discovery: Data understanding and data cleaning tools, Data transformation, Data Discretization, Data Visualization.</p> <p><b>2.7</b> Data Mining Process: CRISP and SEEMA, Supervised and unsupervised learning techniques.</p>			
<b>3</b>	<b>DESCRIPTIVE AND DIAGNOSTIC BUSINESS ANALYTICS (focus must on "how to interpret and apply" using Python.)</b>	<b>10</b>	<b>CO 3</b>
<p><b>3.1</b> Comparative Analysis: Benchmarking performance across categories (Region, Product, and Department) or fixed time periods.  <b>Statistical Tools:</b> Mean, Median, Variance, Standard Deviation, and Coefficient of Variation (for stability analysis).  Visual Tools: Side-by-Side Bar Charts and Box-and-Whisker plots for distribution comparison.</p> <p><b>3.2</b> Value-Based Analysis (Impact Analysis): Identifying high-impact business segments and resource optimization.  <b>Statistical Tools:</b> Pareto Analysis (80/20 Rule), ABC Analysis (Inventory/Customer classification), and Cumulative Frequency Distribution.</p> <p><b>3.3</b> Trend &amp; Growth Analysis (Historical): Identifying secular, seasonal, and cyclical shifts; distinguishing "Noise" from "Signal."  <b>Statistical Tools:</b> Moving Averages (Simple &amp; Exponential), Percentage Change, YoY Growth, and CAGR (Compound Annual Growth Rate).</p>			
<b>4</b>	<b>PREDICTIVE AND RELATIONSHIP ANALYTICS (focus must on "how to interpret and apply" using Python.)</b>	<b>10</b>	<b>CO 4, CO 5</b>
<p><b>4.1</b> Correlation &amp; Relationship Analysis: Measuring the strength and direction between business drivers (e.g., Marketing Spend vs. Revenue).  Statistical Tools: Pearson's Correlation (Linear), Spearman's Rank (Non-linear), and Scatter Plot Matrices.</p> <p><b>4.2</b> Regression Analysis (Causal Modeling): Predicting continuous business outcomes based on one or more predictors.  Statistical Tools: Simple and Multiple Linear Regression.  Diagnostics: <math>R^2</math> (Goodness of fit), P-values (Significance), and Residual Analysis for error checking.</p> <p><b>4.3</b> Time Series Forecasting (Predictive): Analyzing interval-based data to project future business metrics.  Components: Trend, Seasonality, Cyclicity, and Irregularity.  Models: Decomposition models, Autoregression (AR), and Holt-Winters Exponential Smoothing.  Accuracy Metrics: Mean Absolute Error (MAE) and Mean Squared Error (MSE).</p>

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Practical: 04 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● Basic Mathematical operations</li> <li>● Fundamental understanding of Data Science workflows</li> <li>● Knowledge of problem solving tools like algorithms, flowcharts and pseudo codes will be an added advantage</li> </ul>		
<b>Objectives</b> <ul style="list-style-type: none"> <li>● To acquaint students with the process of translating business problems into analytical queries.</li> <li>● To introduce data mining processes (CRISP/SEMMA) and data preparation techniques.</li> <li>● To identify the nature of business data across different organizational domains.</li> <li>● To apply advanced statistical and machine learning tools for trend analysis and prediction</li> </ul>		
<b>Course Outcomes</b> On Completion of this course, student will be able to - <b>CO1:</b> Execute classification, clustering, and association rule mining to solve business use cases. <b>CO2:</b> Perform time series forecasting and trend analysis to predict future business outcomes. <b>CO3:</b> Apply comparative and value-based analysis to optimize business performance. <b>CO4:</b> Evaluate model performance using professional metrics like Confusion Matrix and Accuracy.		
<b>Sr. No.</b>	<b>List of Practical Assignments</b>	<b>Teaching Hours</b>
<b>1</b>	Write a program to identify missing values, duplicate records, and outliers in a business dataset using <b>pandas</b> and <b>seaborn</b> .	<b>04</b>
<b>2</b>	Create a script to convert continuous variables (e.g., Age) into categorical bins (e.g., Age Groups) and apply One-Hot Encoding to unstructured text categories.	<b>04</b>
<b>3</b>	Use Python to generate histograms and density plots to analyze the <b>Volume</b> and <b>Variety</b> of a dataset.	<b>04</b>
<b>4</b>	Write a program to compare sales across different regions using <b>Groupby</b> operations and visualize the consistency using <b>Side-by-Side Bar Charts</b> and <b>Box-and-Whisker plots</b> .	<b>04</b>
<b>5</b>	Implement a script to calculate cumulative contribution of products to total revenue and identify the top 20% "Vital Few." By using <b>Pareto (80/20) analysis</b> .	<b>04</b>
<b>6</b>	<b>ABC Inventory Classification:</b> Create a program to categorize inventory/customers based on usage value into A, B, and C classes.	<b>04</b>

7	<b>Trend &amp; Growth Calculator:</b> Write a script to calculate <b>Year-over-Year (YoY) growth</b> and <b>Compound Annual Growth Rate (CAGR)</b> for a 5-year financial dataset.	04
8	Apply Simple and Exponential Moving Averages to smooth out daily fluctuations in stock or sales data	04
9	<b>Correlation Matrix &amp; Scatter Plot Matrix:</b> Write a program using <code>seaborn.pairplot()</code> to measure the strength of relationships between multiple business drivers like "Marketing Spend," "Social Media Reach," and "Sales."	04
10	<b>Simple &amp; Multiple Linear Regression:</b> Implement a regression model using <code>statsmodels</code> to predict sales and interpret the <b>R-squared</b> and <b>P-values</b> to check model significance.	04
11	<b>Time Series Decomposition:</b> Create a script to decompose a business time-series into its <b>Trend, Seasonality, and Residual</b> components.	04
12	<b>Holt-Winters Forecasting:</b> Use the <code>ExponentialSmoothing</code> library to forecast future demand and calculate accuracy using <b>Mean Absolute Error (MAE)</b> .	04

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Theory: 2 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● Graph Theory, Data Mining, Python programming</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>● Familiarize the learners with the concept of social media.</li> <li>● Familiarize the learners with the concept of social media analytics and understand its significance.</li> <li>● Familiarize the learners with different tools of social media analytics.</li> <li>● Familiarize the learner with different visualization techniques for Social media analytics.</li> <li>● Examine the ethical and legal implications of leveraging social media data.</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, student will be able to - CO1: Understand the concept of Social media CO2: Understand the concept of social media Analytics and its significance. CO3: Learners will be able to use different Social media analytics tools effectively and efficiently. CO4: Learners will be able to use different effective Visualization techniques to represent social media analytics. CO5: Acquire the fundamental perspectives and hands-on skills needed to work with social media data			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Social Media Analytics: An Overview</b>	<b>6</b>	<b>CO1, CO2</b>
1.1 Core Characteristics of Social Media, Types of Social Media. 1.2 Need for Social Media Analytics (SMA), SMA in small & large organizations. 1.3 Social Media vs. Traditional Business Analytics. 1.4 Seven Layers of Social Media Analytics. 1.5 Types of Social Media Analytics, 1.6 Social Media Analytics Cycle 1.6 Challenges to Social Media Analytics 1.7 Social Media Analytics Tools			

<b>2</b>	<b>Social Network Structure, Measures &amp; Visualization</b>	<b>8</b>	<b>CO3, CO4, CO5</b>
2.1 Basics of Social Network Structure - Nodes, Edges & Tie			
2.2 Describing the Networks Measures - Degree Distribution, Density, Connectivity, Centralization			
2.3 Centrality: Degree Centrality, Eigenvector Centrality, Katz Centrality, PageRank, Betweenness, Centrality, Closeness Centrality, Group Centrality			
2.4 Network Visualization - Graph Layout, Visualizing Network features, Scale Issues.			
2.5 Social Media Network Analytics - Common Network Terms, Common Social Media Network Types			
2.6 Types of Networks, Common Network Terminologies, Network Analytics Tools.			
<b>3</b>	<b>Social Media Text, Action and Hyperlink Analytics</b>	<b>10</b>	<b>CO3,CO5</b>
3.1 Social Media Text Analytics- Types of Social Media Text, Purpose of Text Analytics, Steps in Text Analytics, Social Media Text Analysis Tools			
3.2 Social Media Action Analytics -What Is Actions Analytics? Common Social Media Actions, Actions Analytics Tools			
3.3 Social Media Hyperlink Analytics-Types of Hyperlinks, Types of Hyperlink Analytics, Hyperlink Analytics Tool			
<b>4</b>	<b>Social Media Location &amp; Search Engine Analytics</b>	<b>6</b>	<b>CO4, CO5</b>
4.1 Location Analytics - Sources of Location Data, Categories of Location Analytics, Location Analytics and Privacy Concerns, Location Analytics Tools			
4.2 Search Engine Analytics - Types of Search Engines, Search Engine Analytics, Search Engine Analytics Tools			
<b>Reference Books</b>

#### DS-313-MJ-P: Lab Course on DS-312-MJ-T (Social Media Analytics)

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Practical: 4 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>Types of Graphs, Data Mining, Data Analytics</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>To understand the fundamental concepts of social media networks.</li> <li>To learn various social media analytics tools and evaluation matrices.</li> <li>To collect and store social media data.</li> <li>To analyze and visualize social media data</li> <li>To design and develop social media analytics models.</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, student will be able to - CO1: Understand characteristics and types of social media networks. CO2: Use social media analytics tools for business. CO3: Collect, monitor, store and track social media data. CO4: Analyze and visualize social media data from multiple platforms. CO5: Design and develop content and structure based social media analytics models.			
Unit No.	Practical Assignment	Teaching Hours	CO Targeted
1	Study various - i) Social Media platforms (Facebook, X, YouTube etc) ii) Social Media analytics tools (Facebook insights, google analytics etc) iii) Applications of Social media analytics for business. e.g. Google Analytics: <a href="https://marketingplatform.google.com/about/analytics/">https://marketingplatform.google.com/about/analytics/</a>	4	CO1
2	Select <b>two social media platforms</b> (e.g., Facebook & Instagram OR Twitter/X & LinkedIn). Study their <b>network characteristics</b> , types of users, and interaction patterns. <ul style="list-style-type: none"> <li>Identify network type (ego network, follower network, community network)</li> <li>Identify nodes, edges, and ties</li> <li>Compare user engagement mechanisms</li> </ul>	4	CO2, CO4
3	Data Cleaning and Storage- Preprocess, filter and store social media data for business (Using Python, MongoDB, etc)	4	CO3

4	Analyze engagement metrics of a selected social media page/account. <b>Tasks:</b> □ Compute likes, shares, comments, reach	4	CO2, CO4
	<ul style="list-style-type: none"> <li>• Identify best-performing content</li> <li>• Suggest business insights</li> </ul>		
5	Plot the given graph in python and calculate its Degree centrality, density, connectivity	4	CO1
6	Analyze <b>public sentiment</b> on a trending topic (e.g., budget, movie release, product launch). <b>Tasks:</b> <ul style="list-style-type: none"> <li>• Clean text data</li> <li>• Perform sentiment analysis</li> <li>• Generate word cloud</li> </ul>	4	CO3, CO4
7	Data Collection-Select the social media platforms of your choice (X, Facebook, LinkedIn, YouTube, Web blogs etc), connect to and capture social media data for business (scraping, crawling, parsing).	4	CO3, CO4
8	Use <b>Google Trends</b> to study interest patterns for a topic/product. <b>Tasks:</b> <ul style="list-style-type: none"> <li>• Compare keyword trends</li> <li>• Analyze regional popularity</li> <li>• Correlate with social media trends</li> </ul>	4	CO5
<b>Reference Books</b>

<ul style="list-style-type: none"> <li>● Fundamental knowledge of Probability Theory</li> <li>● Basic Statistical Inference</li> <li>● Introductory Linear Algebra (matrices, eigenvalues, eigenvectors)</li> </ul>			
<b>Objectives</b>			
<ul style="list-style-type: none"> <li>● Introduce statistical techniques for analyzing categorical (qualitative) data.</li> <li>● Develop understanding of logistic and log-linear modeling frameworks.</li> <li>● Provide foundations of multivariate statistical methods.</li> <li>● Enable students to apply dimension reduction and classification techniques.</li> </ul>			
<b>Course Outcomes</b>			
On Completion of this course, student will be able to -			
CO1: Explain the structure and properties of categorical and multivariate data.			
CO2: Apply measures of association, and trend tests to analyze contingency tables.			
CO3: Fit and interpret logistic regression and log-linear models for categorical outcomes.			
CO4: Compute and interpret multivariate summary measures.			
CO5: Perform and interpret Principal Component Analysis and Factor Analysis.			
CO6: Apply classification and clustering techniques.			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Introduction to Categorical Data Analysis</b>	<b>08</b>	<b>CO1, CO2</b>
<p><b>Types of Categorical Data:</b> Nominal vs Ordinal variables, Binary data, multinomial data, Contingency tables (2-way and <math>r \times c</math> tables)</p> <p><b>Measures of Association:</b> Odds and Odds Ratio, Relative Risk, Yule's Q, Phi coefficient, Cramér's V</p> <p><b>Chi-Square Methods:</b> Pearson's Chi-square test, Likelihood ratio test, Test of independence, Test of homogeneity</p> <p><b>Exact &amp; Trend Tests:</b> Fisher's Exact Test, Mantel-Haenszel Test, Test for linear trend (ordinal data)</p>			
<b>2</b>	<b>Log-linear Models for Categorical Data</b>	<b>07</b>	<b>CO3</b>
<p><b>Log-linear Models:</b> Poisson regression model, Two-way log-linear model, Interaction terms, Model selection (Backward/Forward approach)</p> <p><b>Logistic Regression:</b> Binary logistic regression, Interpretation of coefficients, Odds ratio interpretation, Goodness-of-fit measures</p> <p><b>Multinomial &amp; Ordinal Logistic Models:</b> Baseline category logit model, Proportional odds model (overview)</p>			

<b>3</b>	<b>Introduction to Multivariate Data Analysis</b>	<b>07</b>	<b>CO4, CO5</b>
<p><b>Multivariate Concepts:</b> Random vectors, Mean vector &amp; covariance matrix, Correlation matrix, Mahalanobis distance</p> <p><b>Multivariate Normal Distribution:</b> Definition and properties (without proof)</p> <p><b>Principal Component Analysis (PCA):</b> Eigenvalues and eigenvectors, Variance explained, Dimensionality reduction</p> <p><b>Factor Analysis:</b> Model formulation, Factor loadings, Communality, Varimax rotation (conceptual overview)</p>			
<b>4</b>	<b>Dimension Reduction and Classification</b>	<b>08</b>	<b>CO6</b>
<p><b>Discriminant Analysis:</b> Linear Discriminant Analysis (LDA), Classification rule Misclassification probability</p> <p><b>Cluster Analysis:</b> Hierarchical clustering, K-means clustering, Distance measures</p> <p><b>Introduction to Canonical Correlation Analysis:</b> Concept, Interpretation, Applications in data science</p>

# **Detail Syllabus**

## **B.Sc. (Data Science)**

### **Semester-VI**

**Savitribai Phule Pune University**  
**B.Sc. Data Science (2024 Pattern)**  
**Sem-VI**

**DS-351-MJ-T: NoSQL Databases**

<b>No. of Credits: 4</b>	<b>Teaching Scheme</b> Theory:4 Hrs./Week	<b>Examination Scheme</b> Continuous Evaluation: 30 Marks End Semester: 70 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● Knowledge of DBMS concepts</li> <li>● Basics of SQL- data retrieval and aggregation</li> <li>● Knowledge of file system concepts</li> <li>● A firm foundation of any RDBMS package</li> <li>● Fundamentals data structures for efficient data storage and analysis</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>● Gives a basic understanding of NoSQL technology.</li> <li>● Provide an insight into different types of NoSQL databases.</li> <li>● Provide hands-on experience with popular NoSQL databases</li> <li>● Helps students choose the right database based on application needs.</li> <li>● Enables students to use NoSQL databases through suitable frameworks.</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, student will be able to - CO1: To know principles, and architecture of NoSQL databases CO2: Analyze and design appropriate aggregation models CO3: Apply distribution models for scalable data systems CO4: Basics of Key-Value and Column-Family databases CO5: CRUD Operation- Document and Graph databases CO6: Apply Polyglot Persistence and MapReduce techniques CO7: Use NoSQL databases in real-world Data Science applications CO8: Select suitable NoSQL databases for data science and big data applications			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Introduction to NOSQL</b>	<b>8</b>	<b>CO1</b>
1.1 Evolution of data management systems 1.2 Limitations of RDBMS for Big Data 1.3 Characteristics of Big Data (5Vs) 1.4 Introduction to NoSQL databases 1.5 CAP Theorem and BASE properties 1.6 ACID vs BASE 1.7 Types of NoSQL databases 1.8 Schema-agnostic nature of NoSQL databases 1.9 Use cases in Data Science and Big Data ecosystems			

<b>2</b>	<b>Aggregation Models</b>	<b>8</b>	<b>CO2</b>
2.1 Concept of aggregation in NoSQL systems 2.2 Aggregate-oriented databases 2.3 Key-Value aggregation model 2.4 Document aggregation model 2.5 Column-family aggregation model 2.6 Aggregate design principles 2.7 Query-driven data modelling 2.8 Comparison with relational normalization 2.9 Schema flexibility and schema evolution in aggregate models			
<b>3</b>	<b>Distribution Models</b>	<b>10</b>	<b>CO3</b>
3.1 Need for distributed data storage 3.2 Data partitioning strategies 3.3 Sharding techniques: Range-Based Sharding, Hashed Sharding, Zone-Based Sharding (Tag-Aware Sharding) 3.4 Replication models: Master–Slave Replication, Multi-Master Replication, Peer-to-Peer architectures, Log-Based/Incremental Replication 3.6 Consistency models: strong consistency, weak consistency (including eventual consistency), and causal consistency 3.8 Fault tolerance and availability 3.9 Version stamps and conflict resolution in distributed systems			
<b>4</b>	<b>NoSQL Databases : Key Value &amp; Column Family</b>	<b>8</b>	<b>CO4</b>
4.1 Key-Value databases: concepts and architecture 4.2 Operations and data access patterns 4.3 In-memory databases 4.4 Redis architecture and commands 4.5 Riak overview 4.6 Column-family databases 4.7 Cassandra architecture and data model 4.8 HBase architecture 4.9 Data modelling and querying 4.10 Use cases in analytics, caching, and logging			
<b>5</b>	<b>NoSQL Databases: Document Store &amp; Graph Database</b>	<b>10</b>	<b>CO5</b>
5.1 Document-oriented databases 5.2 JSON, BSON, and XML document formats 5.3 MongoDB architecture 5.4 CRUD operations and indexing 5.5 Aggregation framework in MongoDB 5.6 Graph database fundamentals 5.7 Property graph model 5.8 Neo4j architecture 5.9 Graph traversal and queries 5.10 Use cases: Social Networks, Recommendation Engines			

<b>6</b>	<b>Polyglot Persistence, Map Reduce</b>	<b>8</b>	<b>CO6,CO8</b>
6.1 Introduction to Polyglot Persistence 6.2 Benefits and challenges 6.3 Database selection strategies 6.4 Integrating multiple data stores 6.6 Introduction to MapReduce 6.7 Map and Reduce functions 6.8 Hadoop ecosystem overview 6.9 Database Performance Monitoring tools 6.10 Introduction to cloud databases: Amazon RDS, Google Cloud Firestore, Microsoft Azure SQL Database 6.11 Introduction to AI Databases: Pinecone, Milvus, Weaviate, Qdrant			
<b>7</b>	<b>NoSQL in Data Science Applications</b>	<b>8</b>	<b>CO7,CO8</b>
7.1 Role of NoSQL in Data Science lifecycle 7.2 Data ingestion and preprocessing 7.3 NoSQL for real-time analytics 7.4 Handling unstructured and semi-structured data 7.5 NoSQL integration with Python and R 7.6 Case studies: <ul style="list-style-type: none"> <li>• Recommendation systems</li> <li>• Social media analytics</li> <li>• IoT and sensor data analysis</li> </ul> 7.7 Mini case study discussion			
<b>Reference Books</b>

**DS-352-MJ-T : Artificial Intelligence in Data Science**

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Theory: 2 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation:15 Marks End Semester : 35 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>• Fundamental concepts, scope, and evolution of Artificial Intelligence.</li> <li>• Knowledge of Programming Language</li> <li>• Data Analytics Skill</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>• Introduce students to AI problem-solving techniques relevant to data-driven applications.</li> <li>• Enable understanding and application of search and heuristic algorithms for decision making.</li> <li>• Familiarize students with game theory, constraint satisfaction, and planning techniques used in AI systems.</li> <li>• Develop the ability to analyse AI strategies and evaluate their performance in data science problems.</li> <li>• Provide exposure to modern AI trends, including Generative AI and Explainable AI.</li> <li>• Prepare students to integrate AI techniques with data science workflows through practical implementation.</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, students will be able to –  <b>CO1:</b> Apply uninformed and informed search techniques to solve data-driven AI problems. <b>CO2:</b> Represent problems and knowledge using suitable AI representations. <b>CO3:</b> Design AI-based decision-making solutions using game search and CSP techniques. <b>CO4:</b> Analyse and evaluate AI model behaviour and search performance. <b>CO5:</b> Analyse and implement AI-based planning and scheduling techniques for data science applications under constraints and uncertainty. <b>CO6:</b> Understand recent trends and applications of AI in Data Science			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Problem Solving Using Search Techniques</b>	<b>9</b>	<b>CO1,CO2</b>
1.1 Problems Solving methods 1.2 Problem-Solving Agents 1.3 Example Problems 1.4 Search Algorithms			

1.5 Blind Search Techniques: <ul style="list-style-type: none"> <li>• Breadth-first search(BFS)</li> <li>• Depth-first search(DFS)</li> <li>• Uniform cost Search.</li> </ul> 1.6 Heuristic search techniques: - <ul style="list-style-type: none"> <li>• Hill Climbing</li> <li>• Best First search</li> <li>• Constraint Satisfaction</li> <li>• A*</li> </ul>			
<b>2</b>	<b>Game Theory and Decision Making</b>	<b>9</b>	<b>CO3,CO4</b>
2.1 Introduction Game Theory <ul style="list-style-type: none"> <li>• Types of Game</li> </ul> 2.2 Optimal Decisions in Games <ul style="list-style-type: none"> <li>• Application of Optimal Decisions in Games</li> </ul> 2.3 Heuristic Alpha–Beta Tree Search <ul style="list-style-type: none"> <li>• Application of Heuristic Alpha–Beta Tree Search</li> </ul> 2.4 Monte Carlo Tree Search <ul style="list-style-type: none"> <li>• Application of Monte Carlo Tree Search</li> </ul> 2.5 Constraint Satisfaction Problems (CSP). <ul style="list-style-type: none"> <li>• Application of Constraint Satisfaction Problem</li> </ul> 2.6 Limitations of Game Search Algorithms			
<b>3</b>	<b>Planning and Scheduling for Data Science Applications</b>	<b>7</b>	<b>CO5</b>
3.1 Introduction to Classical and Automated Planning 3.2 Planning Algorithms and State-Space Models 3.3 Heuristic-Based Planning Techniques 3.4 Hierarchical Task Planning 3.5 Planning under Uncertainty and Resource Constraints 3.6 Comparative Analysis of Planning Approaches			
<b>4</b>	<b>Recent Trends and Role of AI in Data Science</b>	<b>5</b>	<b>CO6</b>
4.1 Role of AI in Data Science 4.2 Information Retrieval and Information Extraction 4.3 Introduction to Generative AI 4.4 Explainable AI and Ethical Considerations 4.5 Computer Vision Applications 4.6 AI Applications in Social Media and Finance 4.7 AI Application in Business and HR Analytics			
<b>Reference Books</b>

**DS-353-MJ-T : Data Privacy and Security**

<b>No. of Credits: 2</b>	<b>Teaching Scheme</b> Theory: 2 Hrs./Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks	
<b>Prerequisites</b>			
<ul style="list-style-type: none"> <li>● Basic knowledge of <b>computer networks</b> and operating systems</li> <li>● Introductory knowledge of <b>data science workflows</b></li> <li>● Understanding of <b>database management systems</b></li> </ul>			
<b>Objectives</b>			
<ul style="list-style-type: none"> <li>● To introduce students to the principles of data security and privacy in digital systems</li> <li>● To explain cryptographic techniques and their applications in securing data</li> <li>● To familiarize students with privacy laws, frameworks, and ethical considerations</li> <li>● To develop skills for designing secure data science systems</li> <li>● To expose students to emerging trends like blockchain and differential privacy.</li> </ul>			
<b>Course Outcomes</b>			
On Completion of this course, student will be able to -			
CO1: Understands the concepts of confidentiality, integrity, and availability in data security.			
CO2: Apply basic cryptographic methods (encryption, hashing, digital signatures) to secure data.			
CO3: Understand privacy principles and compliance with data protection laws.			
CO4: Design secure mechanisms for data storage, transmission, and access control in data Science systems.			
CO5: Understand role of emerging technologies: (Blockchain, differential privacy, AI-driven security) in data protection.			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>Introduction to Data Security</b>	<b>4</b>	<b>CO1</b>
1.1 Introduction: CIA triad: confidentiality, integrity, availability			
1.2 Types of threats: malware, phishing, insider threats			
1.3 Vulnerabilities: software bugs, weak passwords, misconfigurations			
1.4 Risk assessment and mitigation strategies			
1.5 Security policies: organizational rules, compliance requirements			
<b>2</b>	<b>Cryptography Basics</b>	<b>8</b>	<b>CO2</b>
2.1 Introduction: Plain text and cipher Text			
2.2 Substitution techniques			
2.3 Transposition techniques			

2.4 Symmetric and Asymmetric key cryptography (Only introduction of DES,AES,RSA,SHA,MD-5)			
2.4 Steganography			
2.5 Digital signatures and certificates			
<b>3</b>	<b>Privacy Concepts</b>	<b>6</b>	<b>CO3</b>
3.1 Definitions: privacy vs. security			
3.2 Legal frameworks: GDPR, Indian IT Act, HIPAA basics			
3.3 Data anonymization: k-anonymity, l-diversity			
3.4 Pseudonymization and masking techniques			
3.5 Privacy in data publishing and sharing			
<b>4</b>	<b>Secure Systems in Data Science</b>	<b>6</b>	<b>CO4</b>
4.1 Access control models: RBAC (Role Based), ABAC (Attribute Based)			
4.2 Authentication methods: passwords, biometrics, multifactor authentication			
4.3 Secure storage: encryption at rest, database security			
4.4 Secure transmission: Introduction to SSL/TLS, VPNs			
4.5 Cloud security: shared responsibility model, data isolation			
4.6 Big data security: Hadoop/NoSQL vulnerabilities, secure pipelines			
<b>5</b>	<b>Emerging Topics</b>	<b>6</b>	<b>CO5</b>
5.1 Differential privacy: noise addition, privacy budget			
5.2 Blockchain: distributed ledger, immutability, smart contracts			
5.3 AI-driven threat detection: anomaly detection, intrusion detection systems			
5.4 Security challenges in IoT			
5.5 Ethical considerations in data security and privacy			
<b>Reference Books</b>			
Book1: William Stallings, Cryptography and Network Security			
Book2: Daniel J. Solove, Understanding Privacy			
Book3: Arvind Narayanan et al., A Primer on Differential Privacy			
Book4: Atul Kahate, Cryptography and Network Security

**DS-354-MJ-P: Lab Course on DS-351-MJ-T (NoSQL Databases)**

<b>No. of Credits: 2</b>	<b>Teaching Scheme</b> Practical: 4 Hrs./Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks
<b>Prerequisites</b>		
<ul style="list-style-type: none"> <li>● Basic knowledge of database concepts (tables, records, keys)</li> <li>● Understanding of programming fundamentals</li> <li>● Familiarity with JSON data format</li> <li>● Basic knowledge of data structures and relationships</li> </ul>		
<b>Objectives</b>		
<ul style="list-style-type: none"> <li>● Introduce NoSQL database technologies using MongoDB and Neo4j</li> <li>● Perform CRUD operations and manage data efficiently in MongoDB</li> <li>● Design and query complex document structures using JSON/BSON formats</li> <li>● Understand indexing and aggregation techniques for performance optimization</li> <li>● Model real-world applications using document-oriented and graph databases</li> <li>● Implement graph data models and traversal queries using Neo4j</li> <li>● Integrate document and graph databases for analytical applications</li> </ul>		
<b>Course Outcomes</b>		
On Completion of this course, student will be able to -		
CO1: Perform CRUD operations in MongoDB using standard queries.		
CO2: Design and manage nested MongoDB documents using JSON/BSON.		
CO3: Optimize MongoDB queries using indexing and aggregation.		
CO4: Design real-world applications using MongoDB document schemas.		
CO5: Create and manage nodes, relationships, graph traversal and constraints in Neo4j.		
CO6: Develop graph-based applications such as social networks and recommendation systems.		
<b>Assignment 1 : Perform CRUD operations using MongoDB</b>		<b>CO1</b>
Perform CRUD operations in MongoDB: create a collection, insert documents, read data with queries, update records, and delete documents.		
<b>Assignment 2 : Create MongoDB documents using JSON/BSON formats</b>		<b>CO2</b>
Insert and manipulate nested documents in MongoDB using JSON/BSON formats. Query the nested fields effectively.		
<b>Assignment 3 : Create indexes on MongoDB collections</b>		<b>CO3</b>
Create indexes on MongoDB collections and perform queries using filters, projections, and sorting. Measure query performance before and after indexing.		
<b>Assignment 4 : Perform MongoDB aggregation</b>		<b>CO3</b>
Implement MongoDB aggregation pipelines: filter, group, and summarize data from a collection. Demonstrate aggregation using multiple stages		

<b>Assignment 6 : Design a small application using MongoDB</b>	<b>CO4</b>
Design and implement a document schema in MongoDB for an application (e.g., e-commerce or blogging). Populate with sample data and perform queries.	
<b>Assignment 7 : Create nodes and relationships</b>	<b>CO5</b>
In Neo4j, create nodes and relationships representing a domain like <b>users, products, posts</b> . Use Cypher queries to insert data.	
<b>Assignment 8 : Graph traversal queries</b>	<b>CO5</b>
Perform graph traversal queries in Neo4j: find all connected nodes, shortest paths, and neighbors up to N levels.	
<b>Assignment 9 : Design a small application using Neo4j</b>	<b>CO6</b>
<ul style="list-style-type: none"> <li>• Model a social network in Neo4j with users, friendships, posts, and likes. Write queries to find friends-of-friends and user activity.</li> <li>• Build a recommendation system in Neo4j using graph algorithms or traversal queries to suggest products or connections</li> </ul>	
<b>Assignment 10 : Integrate MongoDB and Neo4j</b>	<b>CO6</b>
Integrate MongoDB and Neo4j: Store transactional data in MongoDB and relationships in Neo4j. Perform cross-database queries for analytics.	
<b>Assignment 11 : Perform advanced Neo4j operations</b>	<b>CO6</b>
Perform advanced Neo4j operations: create labels, constraints, indexes, and execute complex Cypher queries to extract insights.	
<b>Reference Books:</b>

**DS-355-MJ-P : Lab Course on DS-352-MJ-T (Artificial Intelligence  
in Data Science)**

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Practical: 4 Hrs./Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>• Fundamentals of Artificial Intelligence</li> <li>• Data Structures and Algorithms</li> <li>• Python Programming</li> <li>• Basic Discrete Mathematics</li> </ul>		
<b>Objectives</b> <ul style="list-style-type: none"> <li>• To implement AI algorithms using Python</li> <li>• To analyse search, planning, and decision-making techniques</li> <li>• To apply AI methods to real-world data science problems</li> </ul>		
<b>Course Outcomes</b> On Completion of this course, students will be able to – <b>CO1:</b> Implement and analyse uninformed and informed (heuristic) search techniques to solve state-space and graph-based problems relevant to data science <b>CO2:</b> Formulate and solve constraint satisfaction problems such as scheduling and resource allocation using appropriate AI techniques. <b>CO3:</b> Implement game-theoretic decision-making algorithms to achieve optimal strategies in competitive and adversarial environments. <b>CO4:</b> Apply heuristic planning techniques for intelligent task scheduling and resource optimization in data-driven applications. <b>CO5:</b> Design, implement, and evaluate rule-based intelligent systems, and analyse the performance of AI algorithms from a data science perspective.		
<b>Operating Environment:</b> <ul style="list-style-type: none"> <li>• <b>Operating Systems:</b> <ul style="list-style-type: none"> <li>○ Microsoft Windows (Windows 10 or higher)</li> <li>○ Linux (Ubuntu 20.04 or higher)</li> <li>○ macOS (macOS Catalina or higher)</li> </ul> </li> <li>• <b>Programming Language:</b> <ul style="list-style-type: none"> <li>○ Python 3.x</li> </ul> </li> <li>• <b>Hardware Requirements:</b> <ul style="list-style-type: none"> <li>○ Minimum 4 GB RAM</li> <li>○ Processor: Intel i3 / AMD equivalent or higher</li> <li>○ Minimum 10 GB free disk space</li> </ul> </li> </ul>		

## Python Development Environments

To write, execute, and debug Python programs efficiently, students can use any of the following tools:

- Anaconda Distribution (Recommended for Data Science students)
- Python IDLE
- PyCharm Community Edition
- Visual Studio Code (VS Code)
- Jupyter Notebook / JupyterLab

## Required Python Libraries (As applicable to experiments)

- numpy
- pandas
- matplotlib
- scikit-learn
- networkx (for graph-based experiments – optional)

## Execution Environment

Programs may be executed using:

- Command Line / Terminal
- Integrated Development Environment (IDE)
- Jupyter Notebook environment

Unit No.	Name of Unit	Teaching Hours	CO Targeted
1	<b>Assignment on Uninformed Search Techniques</b>	6	CO1, CO5
	<ul style="list-style-type: none"> <li>• Implementation of Breadth First Search (BFS)</li> <li>• Implementation of Depth First Search (DFS)</li> <li>• Implementation of UCS for a weighted graph</li> <li>• Application Oriented Implementation:                             <ul style="list-style-type: none"> <li>○ Cycle Detection in data pipelines(DFS)</li> <li>○ Network traversal (BFS)</li> <li>○ Supply Chain Analytics using UCS</li> </ul> </li> </ul>		
2	<b>Assignment on Informed (Heuristic )Search Techniques</b>	8	CO1, CO4,CO5
	<ul style="list-style-type: none"> <li>• Implementation of A* Search Algorithm</li> <li>• Implementation of Hill Climbing</li> <li>• Implementation of Best First Search</li> <li>• Application Oriented Implementation:                             <ul style="list-style-type: none"> <li>○ Delivery Route Optimization using A* Search</li> <li>○ Hill Climbing Algorithm for Feature Selection</li> <li>○ Best First Search for Delivery Prioritization</li> <li>○ Heuristic Planning for Task Scheduling using Best First Search</li> </ul> </li> </ul>

**DS-360-MJ-T : HR Analytics**

<b>No. of Credits:</b> 02	<b>Teaching Scheme</b> Theory: 2 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks	
<b>Prerequisites</b>			
<ul style="list-style-type: none"> <li>● Knowledge of Descriptive Statistics.</li> <li>● Basic Knowledge of Data Science.</li> <li>● Practical knowledge of R Programming.</li> </ul>			
<b>Objectives</b>			
<ul style="list-style-type: none"> <li>● To explore evolving nature of HR analytics</li> <li>● To understand analysis strategies required for HR analytics.</li> <li>● To have hands on practice for Predictive HR analytics using R programming language.</li> </ul>			
<b>Course Outcomes</b>			
On Completion of this course, student will be able to - CO1: Defined HR analytics and its metrics CO2: Perform HR data importing and merging in R environment CO3: Do statistical test on HR data using R language CO4: Perform analytics like diversity analytics, employee engagement and performance analytics, predictive analytics for employee turnover using R programming language.			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>HR analytics :Introduction</b>	<b>5</b>	<b>CO1</b>
1.1. Analytics in HR, Defined Predictive HR analytics 1.2. Introduction of HCM (Human Capital Management) Model, Metrics and Analytics 1.3. Understanding Descriptive Analytics and Perspective Analytics, 1.4. Understanding the need (and business case) for mastering and utilizing predictive HR analytic techniques 1.5. Human capital data storage and ‘big (HR) data’ manipulation 1.6. Predictors, prediction and predictive modelling 1.7. Current state of HR analytic capabilities and professional or academic training 1.8. Business applications of modelling 1.9. HR analytics and HR people strategy 1.10. Becoming a persuasive HR function			
<b>2</b>	<b>HR information systems and data</b>	<b>5</b>	<b>CO2</b>

1.1. Information sources 1.2. Analysis software options 1.3. Using artificial intelligence and large language models to aid analyses Using R 1.4. Importing and merging data 1.5. Big data			
<b>3</b>	<b>Analysis strategies</b>	<b>12</b>	<b>CO3</b>
1.1. From descriptive reports to predictive analytics 1.2. Statistical Significance 1.3. HR analytic metrics/measures 1.4. Data integrity 1.5. Types of data, Categorical and Continuous variables 1.6. Group level and individual level data 1.7. Dependent and Independent variables 1.8. Types of statistical tests 1.9. Statistical test for categorical data 1.10. Statistical test for continuous data/interval level data 1.11. Factor analysis and reliability analysis			
<b>4</b>	<b>Case Studies in HR analytics</b>	<b>8</b>	<b>CO4</b>
1.1. Diversity analytics: Equality, diversity and inclusion, Approaches to measuring and managing D&I, Testing the impact of diversity. 1.2. Employee attitude surveys: employee engagement and workforce perceptions, measure employee engagement, Interrogating the measures, 1.3. Predicting employee turnover: Descriptive turnover analysis, measuring turnover 1.4. Predicting employee performance: measures for performance, predict performance using multiple linear regression .

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Practical: 4 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks	
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● R Programming</li> <li>● Knowledge of HR Analytics</li> </ul>			
<b>Objectives</b> <ul style="list-style-type: none"> <li>● To introduce students to the R programming environment for creating, importing, managing, and pre-processing HR datasets.</li> <li>● To develop students' ability to apply statistical techniques in R for analysing employee's diversity and inclusion data within organizations.</li> <li>● To enable students to analyse employee attitude and engagement data using appropriate analytical tools and techniques in R.</li> <li>● To equip students with the skills to build and interpret predictive models for employee turnover using R.</li> <li>● To provide hands-on experience in performing predictive analytics for evaluating and forecasting employee performance outcomes.</li> </ul>			
<b>Course Outcomes</b> On Completion of this course, student will be able to - CO1: Create or import datasets in R environment CO2: Perform employee diversity analytics using R CO3: Perform Employee attitude analytics using R language CO4: Do Predictive analytics for employee turnover. CO5: Do Predictive analytics for employee performance.			
<b>Unit No.</b>	<b>Name of Unit</b>	<b>Teaching Hours</b>	<b>CO Targeted</b>
<b>1</b>	<b>R Studio Environment</b>	<b>4</b>	<b>CO1</b>
<ul style="list-style-type: none"> <li>● Explore R Studio Environment, Revision Data types, Data structures (vectors, lists, matrices, arrays), create Data set and Data frame, Make plots and visualize data (line, scatter, pie, bar), Importing and Merging Data.</li> </ul>			
<b>2</b>	<b>Diversity analytics</b>	<b>8</b>	<b>CO2</b>

	<ul style="list-style-type: none"> <li>• Prepare and import data set with useful attributes for Gender and grade analysis</li> <li>• Write Program using R for Gender and job grade analysis using frequency tables and Chi square</li> <li>• Write Program using R for exploring ethnic diversity across teams descriptive statistics</li> <li>• Write Program using R for Multiple linear regression to model and predict ethnic diversity variation across teams.</li> </ul>		
<b>3</b>	<b>Employee Attitude Survey</b>	<b>16</b>	<b>CO3</b>
	<ul style="list-style-type: none"> <li>• Prepare datasets for Employee survey to assess employee engagement.</li> <li>• Write Program using R for Exploratory and factor analysis</li> <li>• Write Program using R for Regression and descriptive analytics for survey data</li> </ul>		
<b>4</b>	<b>Predicting Employee Turnover</b>	<b>16</b>	<b>CO4</b>
	<ul style="list-style-type: none"> <li>• Prepare datasets suitable for do the analytics regarding employee turnover including attributes like Gender, Age, LengthOf Service, AppraisalRating, Country, LeaverStatus etc.</li> <li>• Write Program in R language using frequency tables to explore regional differences in staff turnover</li> <li>• Write Program in R language using Chi-square analysis to explore regional differences in individual staff turnover</li> <li>• Write Program in R language for predicting individual turnover</li> <li>• Write Program in R language for comparing expected length of service for men vs women.</li> </ul>		
<b>5</b>	<b>Predicting Employee Performance</b>	<b>16</b>	<b>CO5</b>
	<ul style="list-style-type: none"> <li>• Prepare datasets suitable for do the analytics regarding employee turnover</li> <li>• Write Program in R language uses multiple regression to predict sickness absence using employee attitude scores.</li> <li>• Write Program in R language uses multiple regression to explore patterns of performance with employee profile data in an organisation.</li> </ul>

**DS-363-MJ-P : Lab Course on DS-362-MJ-T (Financial Analytics)**

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Practical: 04 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks
<b>Prerequisites</b> <ul style="list-style-type: none"> <li>● Basic Statistics knowledge.</li> <li>● R Programming proficiency.</li> <li>● Financial Math fundamentals.</li> </ul>		
<b>Objectives</b> <ul style="list-style-type: none"> <li>● To acquaint students with R-based financial modeling and insolvency prediction.</li> <li>● To introduce portfolio optimization and risk-adjusted performance evaluation.</li> <li>● To identify market volatility patterns using statistical time-series frameworks.</li> <li>● To apply technical indicators and visual analytics for trend detection.</li> </ul>		
<b>Course Outcomes</b> On Completion of this course, student will be able to - <b>CO1:</b> Execute corporate finance and project feasibility models using R. <b>CO2:</b> Quantify market risk and volatility using GARCH and VaR. <b>CO3:</b> Construct optimized portfolios using the Markowitz Efficient Frontier. <b>CO4:</b> Build automated technical dashboards for market signal interpretation.		
<b>Sr. No.</b>	<b>List of Practical Assignments</b>	<b>Teaching Hours</b>
<b>1</b>	Import raw CSV/Excel accounting data and use <code>dplyr</code> to calculate key liquidity and profitability ratios.	<b>04</b>
<b>2</b>	Write an R function to calculate <b>NPV and IRR</b> for uneven cash flows and perform sensitivity analysis on the discount rate.	<b>06</b>
<b>3</b>	Implement a script to compare multiple projects using <b>Payback Period and MIRR</b> (Modified Internal Rate of Return).	<b>06</b>
<b>4</b>	Apply the <b>Altman Z-Score</b> formula to real-time company data to classify financial distress zones.	<b>04</b>
<b>5</b>	Use the <code>Portfolio Analytics</code> package to plot the <b>Markowitz Efficient Frontier</b> and identify the minimum variance portfolio.	<b>06</b>
<b>6</b>	Calculate Beta ( $\beta$ ) for a stock by regressing its returns against a market index (e.g., Nifty 50) to determine the Cost of Equity.	<b>06</b>

7	Compute and visualize the <b>Sharpe and Treynor Ratios</b> for a multi-asset portfolio using the <b>Performance Analytics</b> library.	04
8	Use <b>quantmod</b> to fetch live stock data via Yahoo Finance API and adjust for <b>stock splits and dividends</b> .	04
9	Perform the <b>Augmented Dickey-Fuller (ADF) test</b> on stock prices and transform them into log-returns for analysis.	04
10	Calculate the <b>Value at Risk (VaR)</b> using the Historical Simulation and Parametric (Gaussian) methods in R.	04
11	Fit <b>ARCH and GARCH (1,1)</b> models to capture volatility clustering in financial returns using the <b>rugarch</b> package.	04
12	Generate and plot <b>RSI, MACD, and Moving Averages</b> overlaid on interactive Candlestick charts using <b>tidyquant</b> .	04
13	Analyze the correlation between trading volume and price breakouts using visual scatter plots and ROC (Rate of Change) indicators.	04

**DS-371-VSC-P : Lab Course on Statistical Analysis using PSPP**

<b>No. of Credits: 02</b>	<b>Teaching Scheme</b> Practical: 04 Hrs/Week	<b>Examination Scheme</b> Continuous Evaluation: 15 Marks End Semester : 35 Marks
<b>Prerequisites</b>		
<ul style="list-style-type: none"> <li>● Basic Statistics knowledge.</li> </ul>		
<b>Objectives</b>		
<ul style="list-style-type: none"> <li>● To understand the fundamentals of statistical data analysis using PSPP.</li> <li>● To perform data entry, coding, and management of research data effectively.</li> <li>● To apply descriptive and inferential statistical techniques for data analysis.</li> <li>● To interpret statistical results and prepare meaningful research reports.</li> <li>● To develop practical skills in using open-source statistical software</li> </ul>		
<b>Course Outcomes</b>		
At the end of this course, students will be able to:		
<ol style="list-style-type: none"> <li>1) <b>CO1:</b> Demonstrate competence in data management using PSPP, including data entry, variable coding, transformation, and preparation of datasets for analysis.</li> <li>2) <b>CO2:</b> Apply descriptive statistics, correlation, regression, and hypothesis testing techniques using PSPP and accurately interpret the statistical output.</li> <li>3) <b>CO3:</b> Analyze real-world datasets using appropriate statistical procedures in PSPP and present clear, evidence-based conclusions in report format.</li> </ol>		
<b>Sr. No.</b>	<b>List of Practical Assignments</b>	<b>Teaching Hours</b>
<b>1</b>	<b>Introduction to PSPP Interface and Data Entry:</b> Understanding Data View and Variable View, Defining variables (numeric, string, labels, value labels), Saving and opening data files (.sav format)	<b>06</b>
<b>2</b>	<b>Data Import and Coding:</b> Importing data from Excel/CSV, Recoding variables (Recode into Same/Different Variables)	<b>06</b>
<b>3</b>	<b>Data Visualization:</b> Frequency tables, Diagram and graphs	<b>06</b>

<b>4</b>	<b>Descriptive Statistics – Univariate Analysis:</b> Computation of Mean, Median, Mode, Standard deviation, Variance	<b>06</b>
<b>5</b>	<b>Cross Tabulation and Chi-Square Test:</b> Creating contingency tables, Performing Chi-square test of independence, Interpretation of output	<b>06</b>
<b>6</b>	<b>Correlation Analysis:</b> Computation of Pearson’s correlation coefficient, Spearman’s rank correlation, Testing significance, Interpretation of correlation matrix	<b>06</b>
<b>7</b>	<b>Fitting of Simple, Multiple and Logistic Linear Regression Model</b>	<b>06</b>
<b>8</b>	<b>Testing of hypothesis:</b> Testing difference between two means, Checking homogeneity of variance, Interpretation of output	<b>06</b>
<b>9</b>	<b>Parametric and Non-parametric Tests</b>	<b>06</b>
<b>10</b>	<b>Reliability Analysis:</b> Cronbach’s Alpha, Scale reliability, Interpretation for survey data	<b>06</b>

**DS-381-OJT: On Job Training**

<b>No. of Credits: 4</b>	<b>Duration: 120 Hrs</b>	<b>Examination Scheme</b> Continuous Evaluation: 30 Marks End Semester: 70 Marks
<b>Objectives</b> <ul style="list-style-type: none"> <li>• To apply data science concepts to real-world industrial problems.</li> <li>• To gain practical exposure to data collection, preprocessing, and analysis techniques.</li> <li>• To work with data science tools, programming languages, and visualization platforms.</li> <li>• To develop analytical thinking and problem-solving abilities using data-driven approaches.</li> <li>• To understand business intelligence and decision-making processes.</li> <li>• To improve teamwork, communication, and professional ethics.</li> <li>• To gain industry exposure in analytics, and dashboard development.</li> </ul>		
<b>Course Outcomes</b> On Completion of this course, student will be able to - CO1: Understand real-world applications of data science in industry. CO2 : Perform data preprocessing, cleaning, and transformation using suitable tools. CO3 : Apply Python/R programming for data analysis and basic machine learning tasks. CO4 : Create interactive dashboards and reports using visualization tools CO5 : Analyze datasets and derive meaningful insights for decision-making CO6 : Prepare professional reports and presentations based on job training experience.		
<b>Sr. No.</b>	<b>Guidelines For On Job Training (OJT)</b>	
<b>1</b>	Student must undergo for OJT/Internship during semester-VI after teaching and practical hours	
<b>2</b>	Student are expected to complete the related work/project within 120 hours assigned by organization (company/ industry/ consultancy/ institution)	
<b>3</b>	The internship work may involve the Data Analytics or IT related assignment(s) OR the maintenance of existing project OR the design/development of new project OR equivalent work	
<b>4</b>	College should assign the mentors/guides for students to monitor the progress throughout the OJT	
<b>5</b>	Students have to submit the weekly progress report duly signed by the concern authorities of organization to the assigned mentor	
<b>6</b>	At the end of OJT, students should prepare the documentation and submit a report to the college in prescribed format given below	
<b>7</b>	After completion, the final presentation and documentation will be evaluated by the examination panel as per the University norms	
<b>OJT Report Documentation Format</b>		
	<ul style="list-style-type: none"> <li>• Front Page</li> <li>• College Certificate</li> <li>• Company Certificate</li> <li>• Index</li> </ul>	

	<p>1) Learning objectives</p> <p>Every OJT comes with learning objectives, something you want to gain and acquire from that company. Hence, listing down the knowledge and skills will allow the employers/directors to know if you've accomplished your learning objectives upon finishing the OJT.</p> <p>2) Company information</p> <p>[Company name] was founded in [year] with the vision to [details of the vision]. The company's mission is to [mission statement]. [Company name] plays an important role in the [name of the industry] industry. I chose to OJT in this organization because I want to contribute to their mission which is aligned and relevant to my career goals.</p> <p>3) OJT description</p> <p>My role at [Company name] was to [details of your job description]. I worked directly with the [department] and [other relevant departments (if any)] in ensuring [OJT responsibilities].</p> <p>4) Position and OJT responsibilities / Assignments done</p> <p>5) Learning, challenges, and skills while doing OJT</p> <p>6) Overview of OJT experience</p> <p>During my OJT with [Company name], I was able to experience working first-hand with [the tasks you've completed], and through that, I'm able to develop my [skills you've acquired]. I found out that my [experiences] are useful in solving issues related to [problems you've solved]. Although I am considered to be less experienced with [the tasks/issues you've faced], I'm able to solve the problems with the help of my team by [describing how you apply the skills you've acquired].</p> <p>7) Outgoing consideration</p> <p>While I've gained many experiences and skills at the [Company name], I feel that I'm still lacking the confidence to solve [tasks you wished you were better at doing]. If I'm allowed more time to learn and participate at the [the aspects of the job you wanted to join], I would be able to polish my skills more in solving the [tasks/issues you've faced].</p> <p>8) Observation &amp; Findings</p> <ol style="list-style-type: none"> <li>a. Front end tool used</li> <li>b. Back-end tools used</li> <li>c. Tools used other than curriculum</li> <li>d. Code of conduct</li> <li>e. Employment process</li> <li>f. Appraisal process</li> <li>g. Areas where you need improvement</li> <li>h. What is your learning / outcome of OJT?</li> </ol>
