

**Savitribai Phule Pune University**  
**(Formerly University of Pune)**  
**REVISED SYLLABUS**  
**OF**  
**T. Y. B. A. APPLIED STATISTICS (General )**  
**Choice Based Credit System Syllabus**  
**With Effect from June 2021**

**Preamble:**

Statistics is used in many different ways in diverse contexts. For a cricket fan, Statistics is the information about runs scored or wickets taken by a player. For the manager of a manufacturing unit, Statistics may be the information about the production/manufacturing process. For a medical researcher, investigating the effects of a new drug, Statistics is the evidence of research efforts. For a college student, Statistics shows the grades or marks scored in a course. Thus, in all these examples, Statistics refers to quantitative data from the area under study. Statistics as a subject is an important branch of knowledge and is devoted to various techniques of collection, presentation, analysis and interpretation of data. It is a science of learning from data. The subject provides tools for making decisions when conditions of uncertainty prevail, using ideas of probability. Hence Statistical tools and techniques are used in almost all fields such as agriculture, business, management, economics, finance, insurance, education, sports, biotechnology, medical science, etc. During the last two decades, large amount of data has been collected with the help of computers or advanced information technology equipments and more and more sophisticated statistical techniques are needed for the effective analysis and drawing meaningful conclusions from these data. Knowledge of different aspects of Statistics has become crucial in the present technologically advanced scenario. There is a continuous demand for statisticians in the fields of education, industry, software and research. The syllabi of three-year B.A. (Special) degree course in Statistics are framed in such a way that the students at the end of the course are thorough in basic statistical techniques and are ready to pursue a Master degree and/or simultaneously able to seek jobs involving statistical analysis related to a variety of data sets in order to arrive at some valid conclusions.

**Note:**

- (1) A student of the Three-Year B.A. Degree Course offering 'Statistics' at the special level must offer 'Mathematical Statistics' as a General level subject in all the three years of the course. Further, students of the three-year B.A. Degree Course are advised not to offer 'Statistics' as the General level unless they have offered 'Mathematical Statistics' as a General level subject in all the three years of the course.

(2) A student of three-year B.A. Degree Course offering ‘Statistics’ will not be allowed to offer ‘Applied Statistics’ and ‘Statistical Pre-requisites’ in any of the three years of the course.

**(3) Structure of evaluation of theory paper at T.Y.B.A. Statistics (special and general), Applied statistics and Statistical pre-requisites:**

A) Continuous Internal Assessment (CIA) for theory subjects:

Section	Marks
i) Theory examination	20
ii) Home assignment	05
iii) Seminar/class test etc.	05
<b>Total of CIA</b>	<b>30</b>

B) End Semester Examination (ESE) for theory subjects:

Question	Nature	Marks
1	a) Choose correct alternative: i) ii) iii) iv) v) (each with four multiple choice answer A, B, C, D) b) True or false: i) ii) iii) iv) v)	5  5
2	Attempt any four of the following: a) b) c) d) e) f)	20
3	Attempt any four of the following: a) b) c) d) e) f)	20
4	Attempt any two of the following: a) b) c) d)	20
	<b>Total ESE</b>	<b>70*</b>

Foot note:

\* Numerical problem should not exceed 40% of total marks with option questions.

**Instruction for Examination:**

1. Theory question paper for each subject shall cover all the topics in the pertaining syllabus with proportional weightage to the number of hours of prescribed.
2. Medium of Instruction: English
3. Examination:
  - A) Pattern of examination: Semester wise
  - B) Standard of passing: As per norms of University

**NOTE:** Applied Statistics can be offered only as a General level subject. A student of Three-Year B.A. Degree course offering Applied Statistics will not be allowed to take 'Mathematical Statistics', 'Statistical Pre-requisites' and / or 'Statistics' simultaneously in any of the three years of the course.

**Subject: APPLIED STATISTICS (General)  
SEMESTER V**

**ST-34175: Continuous Distribution and Tests of Significance (SEC 1C)**

**Note:** (i) Proof or derivations of results are not expected.  
(ii) More emphasis should be given on solving numerical problems.

**Objectives:** The main objective of this course is to introduce students to continuous type distributions, central limit theorem and tests based on significance. Also to acquaint students with testing procedures based on t, chi-square and F distributions.

**Outcomes:** At the end this course, students are expected to be able:

- to understand continuous probability distribution. Also, to apply Normal distribution and its properties to different situations,
- to work Central Limit Theorem and Weak Law of Large Numbers,
- to apply tests based on Normal distribution,
- to carry out tests based on based on t, chi-square and F distributions.

**Contents:****1. Continuous type distributions: (10L)**

**1.1** Definition of continuous type of r.v. through p.d.f.

**1.2** Continuous distribution function: Definition and properties.

**1.3 Normal distribution: Definition using p.d.f.**

$$f(X) = \frac{1}{\sigma\sqrt{2\pi}} \exp\left\{-\frac{(x-\mu)^2}{2\sigma^2}\right\}, -\infty < x < \infty, -\infty < \mu < \infty, \sigma > 0$$
$$= 0, \text{otherwise}$$

Notation:  $X \rightarrow N(\mu, \sigma^2)$

Nature of probability curve for different values of parameters, statement for properties of normal distribution, standard normal distribution

**2. Central Limit Theorem and Weak Law of Large Numbers: (8L)**

**2.1** Sequence of r.v.s., convergence of sequence of r.v. in a) probability b) distribution with simple illustrations.

**2.2** Statements of the Central Limit Theorem (CLT) for i.i.d. r.v.s. and Weak law of large numbers (WLLN). Applications of CLT and WLLN.

**3. Tests of significance: (15L)**

**3.1** Notion of random sample and a statistic as a function  $T(X_1, X_2, \dots, X_n)$  and its illustrations.

**3.2** Sampling distribution of  $T(X_1, X_2, \dots, X_n)$ . Notion of standard error of a statistic.

**3.3** Notion of hypothesis, simple, composite, critical region, level of significance, Type-I and Type-II errors, size and power of a test.

**3.4** Tests based on Normal distribution for mean and proportion

(i)  $H_0 : \mu = \mu_0$  against  $H_1 : \mu \neq \mu_0, \mu < \mu_0, \mu > \mu_0$

(ii)  $H_0 : \mu_1 = \mu_2$  against  $H_1 : \mu_1 \neq \mu_2, \mu_1 < \mu_2, \mu_1 > \mu_2$

(iii)  $H_0 : P = P_0$  against  $H_1 : P \neq P_0, P < P_0, P > P_0$

(iv)  $H_0 : P_1 = P_2$  against  $H_1 : P_1 \neq P_2, P_1 < P_2, P_1 > P_2$

**4. Tests based on t, Chi-square and F distributions: (15L)**

**4.1** t-tests for

(i)  $H_0 : \mu = \mu_0$  against  $H_1 : \mu \neq \mu_0, \mu < \mu_0, \mu > \mu_0$

(ii)  $H_0 : \mu_1 = \mu_2$  against  $H_1 : \mu_1 \neq \mu_2, \mu_1 < \mu_2, \mu_1 > \mu_2$

(iii) Paired t-test

**4.2** Chi-square test for

(i)  $H_0 : \sigma^2 = \sigma_0^2$  against  $H_1 : \sigma^2 \neq \sigma_0^2, \sigma^2 < \sigma_0^2, \sigma^2 > \sigma_0^2$

(ii) Goodness of fit test

(iii) Independence of attributes: Chi square test for independence in a 2 x 2 contingency- table (without proof). Yate's correction not expected.

**4.3** F-test for  $H_0 : \sigma_1^2 = \sigma_2^2$  against  $H_1 : \sigma_1^2 \neq \sigma_2^2, \sigma_1^2 < \sigma_2^2, \sigma_1^2 > \sigma_2^2$

## **Subject: APPLIED STATISTICS (General)** **SEMESTER VI**

### **ST-34176: Design of Experiments, Non-parametric Tests and Statistical Quality Control (SEC 1D)**

**Note: (i) Proof or derivations of results are not expected.**  
**(ii) Emphasis should be given on solving numerical problems.**

**Objectives:** The main objective of this course is to introduce students to basic concepts of Design of Experiments and Non-Parametric tests. Also to strengthen students' regarding about the foundations of Statistical Quality Control

**Outcomes:** At the end this course, students are expected to be able:

- to understand Analysis of Variance techniques,
- to get acquainted with basics of Design of Experiment,
- to apply Non-Parametric tests,
- to understand the concepts of Statistical Quality Control.

## Contents:

### 1. Design of Experiments: (18L)

**1.1** Basic terms of design of experiments: Experimental material, experimental unit, experimental error, treatment, block, layout of an experiment. Basic principles of design of experiments: Replication, randomization and local control. Choice of size and shape of a plot for uniformity trials, the empirical formula for the variance per unit area of plots

**1.2** Concept of analysis of variance:

One-way and two-way classification: break up of total sum of squares and total degrees of freedom (d.f.), analysis of variance table, test of hypotheses of (i) equality of several means, (ii) equality of two means.

**1.3** Completely Randomized Design (CRD): Application of the principles of design of experiment in CRD layout,

$$\text{Model: } X_{ij} = \mu + \alpha_i + \varepsilon_{ij}, \text{ where } i=1, 2, \dots, t; j=1, 2, \dots, n_i$$

Assumptions and interpretations Testing normality graphically. Statement of partition of total sum of squares and degrees of freedom (d.f). Hypotheses to be tested, ANOVA table and test of significance of hypotheses.

**1.4** Randomized Block Design (RBD): Application of the principles of design of experiments in RBD, layout

$$\text{Model: } X_{ij} = \mu + \alpha_i + \beta_j + \varepsilon_{ij}, \text{ where } i=1, 2, \dots, t; j=1, 2, \dots, b$$

Assumptions and interpretations. Statement of partition of total sum of squares and degrees of freedom (d.f). Hypotheses to be tested, ANOVA table and test of significance of hypotheses.

**1.5** Latin Square Design (LSD): Application of the principles of design of experiments in LSD, layout,

$$\text{Model: } X_{ij(k)} = \mu + \alpha_i + \beta_j + \gamma_k + \varepsilon_{ij(k)}, \text{ where } i=1, 2, \dots, m; j=1, 2, \dots, m; k=1, 2, \dots, m.$$

Assumptions and interpretations. Statement of partition of total sum of squares and degrees of freedom (d.f). Hypotheses to be tested, ANOVA table and test of significance of hypotheses.

### 2. Non - parametric tests: (8L)

**2.1** Distinction between a parametric and non-parametric problem.

**2.2** Concept of distribution free statistic.

**2.3** One-tailed and two-tailed test procedure of

(a) Sign test, (b) Wilcoxon's signed rank test.

**2.4** Test for randomness.

### 3. Statistical quality control: (22L)

**3.1** Statistical quality control: Meaning and Scope.

**3.2** Control chart - Introduction:

Chance and assignable causes of quality variations, statistical basis of control chart (connection with test of hypothesis is NOT expected). Control limits (3- sigma limits only).

Criteria for judging lack of control:

(i) One or more points outside the control limits and

(ii) Non-random variations within the control limits: such as a run of seven or more points on either side of the control line, presence of trend or cycle.

### 3.3 Control charts for variables:

Purpose of R-chart and X chart, construction of R-chart, X-chart when standards are not given. Plotting the simple mean and ranges on X and R charts respectively. Necessity for plotting R-chart. Revision of R-chart. Drawing conclusion about state of process. Revision of X chart. Control limits for future production.

### 3.4 Control Chart for attributes:

(a) Control chart for fraction defective (p-chart) only for fixed sample size. Determination of central line, control limits on p-chart, plotting of sample fraction defectives on p-chart. Revision of p-chart, determination of state of control of the process and interpretation of high and low spots on p-chart. Estimation of central line and control limits for future production.

(b) Control chart for number of defects per unit (c-chart) Construction of c chart when standards are not given. Plotting of number of defects per unit on c-chart, determination of state of control of the process, revision of control limits for future production.

### 3.5 Identification of real life situations where these charts can be used.
