Preface by Board of Studies

Dear Students and Teachers,

We, the members of the Board of Studies – Mechanical Engineering, are very happy to present the Second Year Mechanical Engineering syllabus, effective from the Academic Year 2025–26 (2024 Pattern). We are confident that you will find this syllabus both interesting and challenging. The present curriculum will be implemented for Second Year Engineering from the academic year 2025–26, and it will be subsequently extended to the Third and Final Years in the academic years 2026–27 and 2027–28, respectively.

Mechanical Engineering is one of the most sought-after branches among engineering students, which necessitates continuous revision and up gradation of the syllabus. Mechanical Engineering is a dynamic discipline that integrates principles from core engineering fields and supports innovation across manufacturing, design, energy, materials, and automation. This curriculum is designed to provide students with a comprehensive understanding of the fundamentals, emerging technologies, and practical applications in Mechanical Engineering, while also equipping them to meet the demands of a rapidly evolving industry.

The revised syllabus aligns with the vision of NEP-2020, and conforms to the frameworks set by Savitribai Phule Pune University, AICTE New Delhi, UGC, and various accreditation agencies. It takes into account recent technological developments, innovations, and industry needs to ensure students are well-prepared for professional challenges.

Wherever applicable, additional learning resources such as NPTEL and SWAYAM links are provided at the end of each course. Students are encouraged to utilize these platforms for self-learning, engage in online courses, and undertake additional projects to enhance their knowledge and skill set. On successful completion, they are advised to submit their course certifications, which will further support and enrich their academic growth.

This curriculum is the result of collaborative efforts involving academic experts, industry professionals, and alumni to ensure relevance and excellence. It is designed not only to meet current industry expectations but also to prepare students for higher studies, research, and entrepreneurial ventures in the field of Mechanical Engineering.

We hope this curriculum inspires students to become technically competent professionals, responsible citizens, and contributors to the technological and sustainable advancement of society.

Dr. Pradeep A. Patil Chairman Board of Studies - Mechanical Engineering

Program Specific Outcomes

PSO1: SPECIFY, DESIGN and **EVALUATE** mechanical components and systems using modelling and analysis software.

PSO2: APPLY knowledge of machines, tools, automation, properties of advanced materials and modern management methods for manufacturing of mechanical components and systems.

PSO3: **APPLY** core aspects of thermal and fluid engineering to determine the performance of mechanical systems including power absorbing and power generating systems.

Program Educational Objectives

Program Educational Objectives (PEOs) are broad statements that describe the career and professional accomplishments that the program is preparing a graduate to achieve.

PEO1: The graduate will have a successful career in mechanical engineering with strong technical, research & professional skills.

PEO2: The graduate will possess an ability to work in diversified fields along with team work and leadership qualities.

PEO3: The graduate will continue to learn and to adapt in a society of constantly evolving technological environment

Program Outcomes

Program Outcomes (POs) are statements that articulate what students are expected to know, understand, and be able to do by the time they graduate from the program. These outcomes are aligned with the overall educational objectives of the program and reflect the skills, knowledge, attitudes, and behaviors acquired by students throughout their academic journey. On successful completion of B.E. in Mechanical Engineering, graduating students/graduates will be able to:

PO No.	Title	Program Outcome Description
PO1	Engineering Knowledge	Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop the solution of complex engineering problems.
PO2	Problem Analysis	Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
PO3	Design / Development of Solutions	Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for public health and safety, whole-life cost, net zero carbon, culture, society and environment. (WK5)
PO4	Conduct Investigations of Complex Problems	Conduct investigations of complex engineering problems using research- based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8)
PO5	Engineering Tool Usage	Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling, recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
PO6	The Engineer and The World	Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7)
PO7	Ethics	Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
PO8	Individual and Collaborative Team Work	Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
PO9	Communication	Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.
PO10	Project Management and Finance	Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects in multidisciplinary environments.
PO11	Life-Long Learning	Recognize the need for, and have the preparation and ability for: (i) independent and life-long learning, (ii) adaptability to new and emerging technologies, and (iii) critical thinking in the broadest context of technological change. (WK8)

Knowledge and Attitude Profile (WK)

WK No.	Focus Area	Description
WK1	Natural Sciences and Social Sciences	A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.
WK2	Mathematics and Data Analysis	Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.
WK3	Engineering Fundamentals	A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.
WK4	Engineering Specialist Knowledge	Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.
WK5	Engineering Design and Environmental Considerations	Knowledge, including efficient resource use, environmental impacts, whole- life cost, re-use of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.
WK6	Engineering Practice (Technology)	Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.
WK7	Role of Engineering in Society	Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.
WK8	Research and Critical Thinking	Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.
WK9	Ethics and Inclusive Behavior	Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability, etc., with mutual respect.

General Rules and Guidelines

Term	Definition
Course Outcomes (COs)	Course Outcomes are narrower statements that describe what students are expected to know and be able to do at the end of each course. These relate to the skills, knowledge, and behavior that students acquire throughout the course.
Assessment	Assessment is one or more processes, carried out by the institution, that identify, collect, and prepare data to evaluate the achievement of Program Educational Objectives (PEOs) and Program Outcomes (POs).
Evaluation	Evaluation is one or more processes, performed by the Evaluation Team , to interpret the data and evidence gathered through assessment practices. It determines how well PEOs or POs are being achieved, and informs decisions for improvement.

Assessment and Evaluation:

Assessment and Eval 1. Comprehensive Co 2. End-Semester Exa	luation shall be conducted in two parts: ontinuous Evaluation (CCE) mination (ESE)	
Component	Description	Marks
Comprehensive Continuous Evaluation (CCE)	Conducted at institute level, covering all Units of the syllabus. The design and mark allocation follow the Continuous Assessment Sheet structure.	15 to 35
End-Semester Examination (ESE)	Conducted at university level, typically covering the entire syllabus through summative examination.	70
	Total Marks per Subject	100

A) Comprehensive Continuous Evaluation (CCE)

To design a Comprehensive Continuous Evaluation (CCE) scheme for a theory subject of 30 marks with the specified parameters, the allocation of marks and the structure can be as per continuous assessment sheet;

Field Activities / Home Assignments

Field activities and home assignments are essential components of experiential learning. Under this head, course projects, industrial visits, and guest lectures are to be incorporated. For each unit, one such activity should be designed and executed to reinforce theoretical learning through practical exposure.

1. Course Projects

Course Projects should be framed based on real-world problems relevant to the subject. Each course project must be communicated through one of the following modes. It is recommended to complete all the communication modes across different course projects:

- Poster Presentation
- PowerPoint Presentation
- Model Making
- Field or Survey Report with Oral Presentation (e.g., case study)
- Submission of Digital Content (e.g. Video Summary)

To evaluate these field activities, **assessment rubrics** should be designed. The rubrics should include criteria such as clarity, innovation, subject relevance, presentation skills, and technical content.

Note: Part of work of any co-curricular activities (relevant to subject contents) like national level project competitions, club activities, paper presentations, startup activities can be accepted as a course projects.

2. Industrial Visit

An industrial visit should be planned in alignment with the subject's scope and should particularly address advancements in the respective field. The purpose is to provide students exposure to actual engineering practices and systems.

Assessment of industrial visits should be carried out using any of the following tools:

- Quiz (based on the visit)
- Interactive video or oral discussion
- Submission of a detailed visit report

3. Guest Lectures

Guest lectures should be relevant to the course and highlight advanced topics or recent trends in the field. Subject experts from academia or industry may be invited.

Assessment methods for guest lectures may include:

- Quiz conducted post-lecture
- Attendance monitoring
- Evaluation of attentiveness and participation

Rubrics can be developed, if possible, to objectively assess student involvement in guest lectures.

4. Quiz

Unit-wise quizzes should be planned and can be conducted either **online** (via LMS, Google Forms) or **offline**. Each quiz should include a **pool of 20 questions**, from which **students are required to attempt any 10**. The quizzes should be diversified across the following question types:

- Simple Multiple Choice Questions (MCQs)
- Numerical MCQs
- Image-based Questions
- Match the Following
- Fill in the Blanks

• Drag and Drop (using images or words)

This variety ensures the assessment caters to different cognitive skills and learning styles.

5. Internal Tests

Two major internal tests should be conducted as follows:

- 1. Midterm Examination: This should cover Unit I and Unit II, and should include questions targeting Bloom's Taxonomy Levels 2, 3, and 4 (UNDERSTAND, APPLY, and ANALYZE).
- 2. End term Examination: This should cover the remaining units and should also include questions mapped to BL Levels 2, 3, and 4.

B) End-Semester Examination (ESE)

The End-Semester Examination (ESE) consists of a 70-mark written theory examination based on all the units of the course syllabus scheduled by the university. Question papers will be sent by the university through QPD (Question Paper Delivery). The university will schedule and conduct the ESE at the end of the semester.

1. Question Paper Design

The following structure is to be followed for designing an ESE for a **theory subject of 70** marks covering all 5 units of the syllabus, with **questions set as per Bloom's Taxonomy** guidelines and 14 marks allocated per unit.

2. Balanced Coverage

Ensure balanced coverage of all units with questions that assess different cognitive levels of Bloom's Taxonomy:

- a) **Remembering**: Basic recall of facts and concepts.
- b) **Understanding**: Explanation of ideas or concepts.
- c) **Applying**: Use of information in new situations.
- d) **Analyzing**: Drawing connections among ideas.
- e) **Evaluating**: Justifying a decision or course of action.
- f) **Creating**: Producing new or original work (if applicable).

3. Detailed Scheme

• Unit-Wise Allocation: 14 Marks per Unit

Each unit will have a combination of questions designed to assess different cognitive levels. By following this scheme, you can ensure a comprehensive and fair assessment of students' understanding and application of the course material, adhering to **Bloom's Taxonomy guidelines** for cognitive skills evaluation.

Unit II	Shear Fo	rce & Bending	Moment Diagrams		(07 Hours)				

SFD & BMD: Introduction to SFD, BMD with application, SFD & BMD for statically determinate beam due to concentrated load, uniformly distributed load, uniformly varying load, couple and combined loading, Relationship between rate of loading, shear force and bending moment, Concept of zero shear force, Maximum bending moment, point of contra-flexure.

Real World Assignment

Activities on SFD & BMD with considering practical applications

Activity I :- Comparison of Shear Force and Bending Moment for various types of loads.

Activity II:- Graphical representation of Shear Force and Bending Moment of a Vehicle Chassis and Axle

Activity III:- Comparison of Shear Force and Bending Moment for various types of supports

Exemplars / Practical Applications

Design of shaft, chassis, axle, wind turbine blade, towers, bridges etc.

Unit III	Bending & Shear Stresses	(07 Hours)
Bending Stre	ess on a Beam: Introduction to bending stress on a beam with application,	Theory of Simple
handing again	mations in much handing domination of flowers for marks. Moment of in arti-	c

bending, assumptions in pure bending, derivation of flexural formula, Moment of inertia of common cross section (Circular, Hollow circular, Rectangular, I & T), Bending stress distribution along the same cross-section

Shear Stress on a Beam: Introduction to transverse shear stress on a beam with application, shear stress distribution diagram along the Circular, Hollow circular, Rectangular, I & T cross-section

Real World Assignment

- 1. Activities on slope & deflection on a beam: Introduction to slope & deflection on a beam with application, slope,
- 2. Deflection and Radius of Curvature, Macaulay's Method, Slope and Deflection for all standard beams

Activity I:- Evaluation of slope and deflection for beam under various load as well as supports.

Activity II:-Verification of deflection of beam using flexural formula and dial gauge.

Activity III:- Visualize beam deflection using suitable software for various load and support.

Exemplars / Practical Applications

1. Propeller shaft, earthmovers, railway tracks section analysis, cranes support design, beam Bending, tower cranes etc

Unit IV	Torsion & Buckling	(07 Hours)
Torsion of ci	rcular shafts: Introduction to torsion on a shaft with application, Basic to	orsion formulae and

assumption in torsion theory, Torsion in stepped and composite shafts, Torque transmission on strength and

rigidity basis, Torsional Resilience

Buckling of columns: Introduction to buckling of column with its application, Different column conditions and critical, safe load determination by Euler's theory. Limitations of Euler's Theory.

Real World Assignment

1. Activities on torsion on thin-walled tubes: Introduction of Torsion on Thin-Walled Tubes Shaft and its application.

Activity I:-Analyse the torsion in thin-walled tubes by applying twisting moment.

Activity II:- Measure the effects of bending and shear on shaft by applying twisting moment *Activity III:-* Measure buckling of column under different end conditions.

Exemplars / Practical Applications

1. Buckling load: Brackets, support members like, staircase, hoardings panels,

2. **Torsion:** Automobile drive shafts, industrial machinery shafts under high torsional and buckling load

	Witchaincal Engineering – 2024 Fattern - Faculty of Science and Fechnology	
Unit V	Principal Stresses, Theories of Failure	(07 Hours)
Principal St	resses: Introduction to principal stresses with application, Transformatio	n of Plane Stress,
Principal Str	esses and planes (Analytical method and Mohr's Circle), Stresses due to com	bined Normal and
Shear stresse	S	
Theories of	Elastic failure: Introduction to theories of failure with application, Maxim	um principal stress
theory, Maxi	mum shear stress theory, Maximum distortion energy theory, Maximum prin	ncipal strain theory
(only theory	part), Maximum strain energy theory (only theory part).	
Real World	Assignment	
Activities on	Application based combined loading & stresses (Based on load and stress c	ondition studied in
Unit I to Uni	t IV)	
Activity I:-A	nalyzing combined loading problem in real-world structural applications.	
Activity II:-	Analyzing eccentrically loaded sign boards (hoardings) for combined loadin	g.
Activity III:-	Analyze mobile/high transmission tower against self-weight and wind press	ure.
Exemplars /	Practical Applications	
1. Desig	gn against seismic loading, mobile and high transmission tower design, knuc	kle joints, toggle
jack,	crank shaft under different stresses etc

Real World A 1. Applic Activit Conce	Assignment eation of SFEE in a Hain any: Measure temperature a pts Covered: Application	r Dryer and airflow of the stea	before and after heating in a adv flow energy equation (SFE	hair drye EE) to rea	er. al-world devices	
 Exemplars / Practical Applications Power Plants, Automotive, Aerospace Engineering and HVAC Systems. Process Engineering, Mechanical System Design. 						
Unit II	Ideal Gas Equations an	d Second	Law of Thermodynamics		(07 Hours)	
Ideal Gas Eq Assignment) I and T-s diagr Processes (O	uations: Ideal Gas definit Equation of State, Ideal C ams, Constant Pressure, pen and Closed system	ition, Gas Gas constar Constant (s), Calcul	Laws: Boyle's law, Charle's l at and Universal Gas constant Volume, Isothermal, Adiaba ations of Heat transfer, W	law, Avo , Ideal ga atic, Poly ork done	gadro'sLaw, (Field as Processes-on P-v /trophic, Throttling e, Internal Energy	

(Numerical). Second Law of Thermodynamics: Limitations of first law of thermodynamics, Thermal reservoir, Heat Engine, Refrigerator and Heat pump: Schematic representation, Efficiency and Coefficient of Performance

(COP), Kelvin-Planck & Clausius Statement of the Second law of Thermodynamics; PMM-II kind, Equivalence of the two statements (Numerical).

Real World Assignment

- 1. Air Expansion in a Balloon
 - Activity: Observe pressure-volume changes by inflating a balloon in a heated vs. cold environment.
 - Concepts Covered: Ideal gas law, Boyle's law, Charles's law

Exemplars / Practical Applications

Refrigeration and Air Conditioning, Compressors. Heat Engine, Heat Pump.

Unit III Entropy and Availability

(07 Hours)

Entropy: Clausius Inequality, Concept of Reversibility and Irreversibility, Entropy as a property, Principle of increase of Entropy, Entropy changes for an Open and Closed System, (Field Assignment) Change of Entropy for an ideal gas (Numerical).

Availability: Available and Unavailable Energy, Concept of Availability, Availability of heat source at constant temperature and variable temperature, Availability of non-flow and steady-flow Systems(No Numerical Treatment)

Real World Assignment

- 1. Entropy
 - Entropy in arranging student serially
 - Entropy in sorting-colored chalks
 - Entropy in Paper Distribution as per sets (set A, B, C) to students serially.
 - Entropy in Arranging Books on a Shelf
- 2. Availability in a Cup of Hot Coffee
- 3. Problem-Solving Task (Quantitative Analysis)
- 4. Real-World Connection (Critical Thinking & Creativity)

Exemplars / Practical Applications

- 1. **Thermodynamics (Heat Engines):** Entropy is used to analyze the efficiency of heat engines, helping engineers understand the limits of energy conversion, such as in the Carnot cycle.
- 2. **Refrigeration Systems:** Entropy helps assess the energy dissipation in refrigeration cycles, guiding the design of more efficient cooling systems.
- 3. **Heat Recovery and Waste Energy Utilization:** Availability is key in designing systems to recover and use waste heat, increasing the overall efficiency of energy systems.

Unit IV	Properties of Pure substances & Vapour Power Cycle	(07 Hours)
---------	--	------------

Properties of Pure substances: Formation of steam, Phase changes, Properties of steam, Use of Steam Tables, Study of p-v, T-s and h-s plots (Mollier Chart) for steam, Dryness fraction and its determination using combined separating and throttling calorimeter, Change of properties, work transfer and heat transfer in Non-flow and Steady flow vapour processes.

Vapour Power Cycle: Carnot cycle, Rankine cycle, Comparison of Carnot cycle and Rankine cycle, (Field Assignment)Introduction to Steam power Plant, Efficiency of Rankine Cycle, Effect of Varying operating parameters like Superheat, Boiler and Condenser Pressure on performance of Rankine cycle, Modified Rankine Cycle. (Numerical on Carnot cycle and Rankine cycle only).

Real World Assignment

- 1. Homemade Rankine Cycle with Waste Heat
 - Design a closed system Rankine cycle using small electric boilers and turbines.
 - Multidisciplinary: Energy Systems, Thermodynamics.
- 2. Steam Pressure and Temperature Measurement in Domestic Pressure Cooker
 - Measure and analyze changes, plotting Mollier charts manually.
 - Multidisciplinary: Thermodynamics, Measurement.

- 3. AI Prediction of Steam Consumption in Small Turbine System (Simulation)
 - AI model to predict performance based on temperature-pressure data.
 - Multidisciplinary: AI, Thermodynamics.

Exemplars / Practical Applications

- 1. Essential in steam quality measurement for power generation industries.
- 2. Used in steam cycles and industrial boilers for energy optimization.

Unit V	Steam Generators & Boiler Draught
--------	-----------------------------------

(07 Hours)

Steam Generators: Classification, Introduction to IBR Act, Non-IBR boilers, Fire tube and water tube boilers, Low pressure boilers - Cornish & Locomotive, High pressure boilers- Babcock &Wilcox, LaMont, Boiler mountings and accessories.

Boiler Performance Calculations: Equivalent Evaporation, Boiler efficiency, Heat balance Sheet. (Numerical). Boiler Draught: Classification, Necessity of Draught, Natural draught, Determination of Height of chimney, Diameter of chimney, condition for maximum discharge, Forced draught, Induced draught, Balanced draught, Draught losses (Field Assignment). (No Numerical Treatment)

Real World Assignment

Debate or Poster Presentation

Comparing Fire-Tube and Water-Tube Boilers

• Activity: Analyze diagrams/models of fire-tube and water-tube boilers and discuss efficiency.

• Concepts Covered: Boiler classification, heat transfer.

Exemplars / Practical Applications

- 1. Used in the power plant for heat generation.
- 2. Used in Multiple industries like automobile, pharmaceutical, dairy products

Learning Resources

Savitribai Phule Pune University Second Year of Mechanical Engineering (2024 Pattern)					
	РСС-203-МЕС	: Engine	eering Materials & Meta	llurgy	
Tea	ching Scheme	Credit	Examination Scl	neme	
Theory	3 Hours/Week	2	ССЕ	Examination Scheme 30 Mai	
Practical	Practical NA		End-Semester	70 Ma	rks
Prerequisite Highe 	Courses, if any: er Secondary Science cou	rses, Engin	eering Physics, Engineering C	Chemistr	у
 Higher Secondary Science courses, Engineering Physics, Engineering Chemistry Course Objectives: To IMPART fundamental knowledge of material science and engineering. To ESTABLISH significance of structure property relationship. To EXPLAIN various characterization techniques. To INDICATE the importance of heat treatment on structure and properties of materials. To EXPLAIN the material selection process. Course Outcomes: After successful completion of the course, learner will be able to: CO2. CORRELATE crystal structures and ASSESS different lattice parameters. CO3. DIFFERENTIATE and DETERMINE mechanical properties using destructive and nondestructive testing of materials. CO4. IDENTIFY & ESTIMATE different parameters of the system viz., phases, variables, component, grains, grain boundary, and degree of freedom. etc. 					
CO6. SELEC	T appropriate materials for	or various a	applications rse Contents		
I Init I	Crystal Structures, Mat	erials Pro	perties and Characterization	n	(08 Hours)
Crystal Stru Mechanisms	Techniques ctures: Introduction to cr	ystal struct	ure, Miller indices, Crystal im	nperfection	ons, and Diffusion
 Mechanisms, introduction to Material Properties, Destructive Testing: Impact test, Cupping test, Non-Destructive Testing: Eddy current test, Sonic, Ultrasonic testing, X-ray Radiography testing (Principle and Applications only) Microscopic Techniques: Sample Preparation and etching procedure, optical microscopy, Electronic microscopy - only SEM, TEM and X-ray diffraction (Principle and Applications only) 					
Real World	Macroscopy: Sulphur printing, flow line observation, spark test Real World Assignment				
Prepare a report on material : major application, compatibility for the application (considering strength, conductivity, corrosion resistance, mechanical, electrical, or thermal properties), crystal structure, List and explain key properties (e.g., hardness, tensile strength, conductivity, brittleness, ductility), Relate these properties to the crystal structure or defects (dislocations, grain boundaries), Hardness test comparison.					
Exemplars /	Practical Applications	n motorial.	without domage field are	mont : d-	ntification
Surface micro	Phase Diagrams and L	n materials	s without damage, field equipi	nent ide	(07 Hours)
Solid solution	ns: Introduction. Types. F	Iumerothe	ry rule for substitutional solid	solution	S
Solidification	1: Nucleation, crystal grov	wth, solidif	ication of pure metals and all	oys.	~
Phase Diagra	ams: Cooling curves, type	es of phase	diagrams, Gibbs phase rules	-	
Iron-Carbon	Iron-Carbon Diagram : Iron-carbon equilibrium diagrams in detail with emphasis in the invariant reactions.				

Real World Assignment Iron-Carbon Phase Diagram Analysis, Microstructural Changes **Exemplars / Practical Applications** Alloy Design in Aerospace and Automotive Industry, Casting and Metal Forming Industries, Heat Treatment Processes in Tool and Die Industry Unit III **Heat Treatments** (07 Hours) Austenite transformation in steel: Time temperature transformation diagrams, continuous cooling transformation diagrams. Retained austenite and its effect, Steps in Heat Treatment and Cooling Medium, Heat Treatment Processes: Introduction, Annealing (Full annealing, Process annealing, Spheroidise annealing, isothermal annealing, stress relief annealing), Normalizing, Hardening, Tempering, Austempering, Martempering, Sub-Zero Treatment, Hardenability Surface Hardening: Classification, Flame hardening, Induction hardening, Carburizing, Nitriding, Carbonitriding **Real World Assignment** Heat Treatment Process Overview, making of iron and steel, Industrial applications, Automobile sectors, Power Plants, Aerospace, and Marine Industries. **Exemplars / Practical Applications** Tool and Die Manufacturing, Bearing and Gear Industries, Automotive Component Production Unit IV **Ferrous Materials** (07 Hours) Carbon Steel: Classification, types & their composition, properties and Industrial application Alloy Steels: Classification of alloy steels & amp; Effect of alloying elements, examples of alloy steels, (Stainless steel, Tool steel) sensitization of stainless steel, Designation of carbon steel and alloy steels as per IS, AISI, SAE Standards Cast Iron: Classification, types; their composition, properties and Industrial application of (White CI, Gray CI, SG CI, Malleable Cast and alloy Cast Iron) Microstructure and property relationship of various ferrous **Materials Real World Assignment** Material Identification, Material Properties, Processing and Manufacturing, Advantages & Limitations [Mild Steel, Medium & High Carbon Steel, Cast Iron, Stainless Steel, Tool Steel, Alloy Steel (e.g., 4140, 4340)]. **Exemplars / Practical Applications** Manufacturing engine parts, chassis components, and tools requiring wear resistance and toughness. **Non-Ferrous Materials** Unit V (07 Hours) Classification of Non-Ferrous Metals: Study of Non-ferrous alloys with Designation, Composition, Microstructure. Mechanical & other properties for Industrial Applications: Copper and its Alloys (Gilding Metal, Cartridge Brass, Muntz Metal, Tin Bronze, Beryllium Bronze), Aluminium and its Alloy (LM5, Duralumin, Y-Alloy, Hinduminum), Nickel and its Alloys (Invar, Inconel), Titanium and its Alloys (Classification, lead based alloys, tin based alloys), Age Hardening. Microstructure and Property relationship of various Non-ferrous Materials. Recent Material used in Additive Manufacturing: Properties, Composition and Application only **Real World Assignment**

Material Overview, Real-Life Product or Component, Key Properties, Processing Methods, Advantages vs. Limitations

Exemplars / Practical Applications

Electrical wiring, connectors, and circuit boards

Learning Resources

	Second Year of M	Mechani	cal Engineering (2024 F	Pattern)		
	OEL-204-ME	C: Digi	tal Business and Techno	ology		
Teachi	ng Scheme	Credit	Examination Sc	heme		
Theory	2 Hours/Week	2	CCE 15 Marks			
Practical NA Z End-Semester 35 Marks						
Prerequisite Co	urses, if any:			1		
Basic kno	wledge of computers	and intern	et usage			
Course Objectiv1. To UNDE2. To UNDE3. To UNDE4. To APPL	es: RSTAND digital trans RSTAND Digital Bus RSTAND how autom Y digital marketing str	sformation siness Moo ation supp rategies (S	n and its impact on business del Innovation, Learn Throug ports to enhance Digital busin EO, social media), and emerg	h Real-W ess. ging tech	Vorld Case Studies (AI, IoT)	
Course Outcomes: After successful completion of the course, learner will be able to: CO.1 UNDERSTAND the concept of Digitization .Impact of Digital Marketing, processes, and strategies. CO.2 COMPARE digital business models using case studies. CO.3 IMPLEMENT basic automation tools in business workflows. CO.4 UNDERSTAND the Role of Technology in Startups. Evaluate E-commerce Platforms						
Course Contents						
Unit IIntroduction to Digital Business(04 Hours)						
Introduction to d models, concept of	igitization, impact of of digital marketing an	digitizatio d it's imp	on on business. Social media act. Digital strategy and inno	ı marketi vation.	ng, digital business	
Real World Assi Create a poster of Media Marketing	gnment any Successful busine	ess Transf	formation using Digital Marke	eting espe	ecially Social	
Exemplars / Pra	ctical Applications					
Sell products onli	ne via platforms like A	Amazon, F	lipkart, and Shopify, reachin	g global o	customers 24/7	
Unit II Dig	gital Business Model				(04 Hours)	
Introduction to digital business model innovation, key drivers of digital business model reinvention, types of digital business model, case study on anyone reinvented business organization						
Real World Assignment Examine a successful case study (e.g., Netflix, Amazon, Ola, Zomato, or BYJU'S) of an organization that reinvented its business model digitally						
Exemplars / Practical Applications						
Subscription-based streaming, original content production, personalized recommendations using AI						
Unit III Bu	siness Automation a	nd Cyber	Security		(04 Hours)	
Introduction to Au Implementation a Cyber security M	utomation in Digital Bund Integration, Impact easures and Best Pract	usiness, Rot of Autom tices.	ole of Automation, Automation nation on Digital Business. In	on Techno troductio	ologies, Automation on to Cyber security,	
Real World Assi	gnment oital business systems	like ERP	and MES (Manufacturing Fx	ecution S	(vstem)	

Exemplars / Practical Applications

Software robots automating repetitive tasks, data recovery in case of breaches or failures

Unit IV	Emerging Tech and Entrepreneurship	(04 Hours)
---------	------------------------------------	------------

Role of technology in modern startups ,Digital marketing fundamentals: SEO, social media, email Marketing E-commerce platforms and tools (Shopify, Woo Commerce, etc.), Introduction to AI, IoT, and block chain in startups

Real World Assignment

Pitch a smart retail idea using AI.

Exemplars / Practical Applications

Automate tasks, analyze data, personalize user experiences, and develop smart products.

Learning Resources

Course Contents								
Unit I Ent	Unit IEntrepreneurial Mindset, Creativity and Innovation(08 Hours)							
 Entrepreneurial mindset: curiosity, resilience, risk-taking, leadership Types of entrepreneurs – Technical, Non-technical, Social, Entrepreneur Innovation types: product, service, process, frugal (Jugaad) innovation Design Thinking: Empathize, Define, Ideate, Prototype, Test Creativity tools: Mind Mapping, SCAMPER, TRIZ Success stories from Indian innovators Case studies: Innovative Indian products/startups 								
Real World Ass	ignment							
 Real World Assignment Assignment 1: Case Study Presentation Activity: Select an Indian startup and analyze: The problem it solves Type of innovation (product, process, frugal, etc.) Entrepreneurial mindset of the founder Deliverable: Present as a 5-minute video or a PPT with voice narration. Assignment 1 Solve a College Problem Using Design Thinking Activity: In small groups, students will solve a common college problem (e.g., canteen cleanliness, Wi-Fi issues, exam stress, long queues, absenteeism, lack of seating, etc.) using the Design Thinking process in 45–60 minutes: Empathize (5–10 min): Talk to 2–3 students or staff to understand the issue Define (5 min): Clearly write the problem in one sentence Ideate (10–15 min): Brainstorm at least 5–7 possible solutions Prototype (10–15 min): Create a quick sketch, model, or chart of the best solution Test (10 min): Share the idea with another group and collect feedback 								
Exemplars / Pra	cucal Application	S enort						
Applicatio	on: Invite an India	n entrepreneu	r (e.g., local startup founder	or alum	nni) for a guest talk.			

Task: Students write a	1-page reflection	on entrepreneurial mind	lset, risks taken.	and innovation style
	10	1	, , ,	·

2. Group Project: Local Entrepreneur Profiling

Application: Each group interviews a local entrepreneur to document:

- Background, business journey
- Type of entrepreneur (technical, social, entrepreneur)
- Key challenges and how they were overcome

Outcome: Create a poster or info graphic summarizing the journey.

3. Campus Creativity Challenge

- Application:
 - Use **Mind Mapping** to improve a college service (e.g., library hours, parking space).
 - Apply **SCAMPER** to redesign a student-used item (e.g., backpack, ID card).
 - Use TRIZ to resolve a contradiction (e.g., "How to make exams easy but still effective").

Outcome: Present "before vs after" concepts	in a gallery walk session.
---	----------------------------

Unit	II	Opportunity Identification and Business Modelling	(08 Hours)		
Opportunity Recognition and Idea Generation - Problem identification and need analysis					
•	• Market research: tools and techniques				
•	Business Model Canvas: customer segments, value proposition, channels				
•	• Lean Startup methodology & Minimum Viable Product (MVP)				
•	Busin	ess plan components and structure			
•	Cost e	stimation, revenue models, and unit economics			
•	Fundi	ng options: Government schemes (Startup India, MSME), VC, Angel Inves	tors,		
•	crowd	funding			
•	Basics	s of financial literacy: Profit-Loss, Break-even, cash flow.			
Real W	orld A	Assignment			
1.	Assig	nment 1: Opportunity Recognition and Need Analysis			
	Activi	ity: Identify 3 real-life problems they or their community face (e.g., water w	waste, long queues,		
	and co	ostly transportation) or college.			
	•	Conduct informal interviews or surveys to understand the need.			
	•	Analyze user pain points and existing gaps.			
	• Deliv	erable: Opportunity report with problem statement user quotes, and propo	sed idea		
2.	Assig	nment 2: Business Model Canvas + MVP Design	seu idea.		
-	Activ	ity: Choose a startup idea and:			
	•	Create a detailed Business Model Canvas (cover all 9 blocks).			
	•	Develop a basic Minimum Viable Product (MVP) - this could be a	a sketch, clickable		
	pro	ototype,			
	Doliv	or service now.	on of lean features		
3.	Assig	nment 3: Business Plan + Funding Strategy + Pitch	on of lean realures.		
	Activ	ity: Prepare a business plan including:			
	•	Executive summary			
	٠	Product/service details			
	Market research insights				
	Costing and basic unit economics				
	Revenue model				
	• Funding plan (choose and justify one: govt scheme, VC, angel, crowdfunding)				
Dali	• Prepare elevator pitch / 1 minute pitch Deliverable: (6 page business plan document + pitch dock (5 7 clides)				
Fyom	lorg /	Practical Applications			
1 <u>1</u>	1 a1 5 / A rrai	nge a Cuest Talk - From Idea to Investment			

Application: Invite a successful entrepreneur to share their journey covering:

• Business Model Canvas

- MVP development
- Business Plan creation
- Funding strategy (e.g., Startup India, VC, angel investors)
- Investor pitch experience

Outcome: Students submit a brief reflection highlighting key learnings from BMC, MVP, funding, and pitching strategies.

2. Conduct Startup Financials Workshop

Application: Hands-on session using a fictional startup (e.g., chai café):

- Calculate fixed and variable costs
- Identify breakeven point
- Build a simple cash flow chart for 6 months

Outcome: Submit an Excel sheet with key financial metrics and a one-page interpretation.

3. Government Funding Scheme Research

Application:

- Each group explores one government scheme (e.g., Startup India Seed Fund, MUDRA loan, PMEG Scheme, MSME credit)
- Analyze eligibility, application process, benefits, and success stories

Outcome: Deliver a 5-minute pitch to a panel of faculty/peers acting as investors.

Learning Resources

Text Books:

- 1. Entrepreneurship Development S.S. Khanka
- 2. Entrepreneurship Development and Small Business Enterprises Poornima M. Charantimath
- 3. Entrepreneurship: New Venture Creation– David H. Holt (Indian Edition by Vikas Publishing)
- 4. Innovation and Entrepreneurship Dr. R.G. Desai
- 5. Essentials of Entrepreneurship and Small Business Management Nandan H.

Reference Books:

- 1. The Lean Startup Eric Ries
- 2. Disciplined Entrepreneurship: 24 Steps to a Successful Startup Bill Aulet (MIT)
- 3. Zero to One Peter Thiel

 Prerequisite Court Manufactur Manufactur Engineerin Engineerin Engineerin Course Objective 	 Prerequisite Courses, if any: Manufacturing Processes Manufacturing Practice Workshop Engineering Physics, Chemistry Engineering Graphics Engineering Materials and Metallurgy 					
 Course Objectives: To UNDERSTAND the basic requirement of drawing and drafting the machine component. To UNDERSTAND the drawing standards, geometric dimensioning & stack up analysis and application of GD&T symbols in the industries. To UNDERSTAND the design principles for different approaches in the industry. To UNDERSTAND safety norms required while using various machine tools and shop floor. To UNDERSTAND the principles & acquire skills to produce components using application of various manufacturing processes. To UNDERSTAND the principles & acquire skills to produce components using application of press 						
 Course Outcomes: After successful completion of the course, learner will be able to: CO1. INTERPRET and APPLY standard drawing sheet layouts, fundamental principles of machine drawing, IS standards and conventions, and appropriate dimensioning practices to produce technically accurate and standardized engineering drawings. CO2. READ, INTERPRET, and ANALYZE industrial drawings by applying standard industrial practices to effectively communicate design and manufacturing intent. CO3. UNDERSTAND and APPLY the principles of GD&T as well as INTERPRET surface finish and welding symbols to enhance design accuracy and manufacturability. CO4: APPLY the fundamental principles of design to create efficient, user-friendly, and safe product designs, supported with suitable real-world examples. CO5: IDENTIFY and ANALYZE safety standards and safety measures applicable to various sections of mechanical workshops and effectively communicate these through the preparation of informative posters or reports. CO6: PLAN and EXECUTE the production of an assembly job by performing a sequence of machining operations while selecting appropriate materials and processes to meet functional and assembly requirements. 						
	List of Experiments					
Experiment 1	the sefects standards and	enfatu masar	a implemented in verier		ars.

training

Second Year Mechanical Engineering – 2024 Pattern - Faculty of Science and Technology	
Experiment 2	12 hrs.
 Production/machining of assembly job containing 2-3 components and suitable for assembly v components viz. nut, screw, bearing etc. consisting at least 4-5 operations from the followin 1. Raw material selection (Suitable for job in assignment) 2. Raw material preparation like hacksaw cutting, etc. 3. Rough turning on lathe/CNC 	with standard ng list:
 4. Rough milling on Milling machine or VMC viz. machining flats, gear cutting, keyways, etc 5. Drilling/tapping/threading 	·
6. Finishing on CNC/VMC (or combined operations from step 3 to 6 on CNC/VMC)7. Surface finishing using Grinding/Polishing/Buffing, etc.	
 8. Surface treatment for corrosion/wear resistance, aesthetics, etc. Students are expected to perform following activities under this experiment: a) Selection of suitable Engineering material viz. ferrous/non-ferrous/non-metallic materie asily in market at least cost considering energy & environmental aspects of Green Manuf b) Select appropriate form of material for job under consideration e.g. Casting/Forging/Ro Bar/Sheet metal/flats, etc. (Refer Machinery Handbook/Westermann Table, or any avail sources, etc.) c) Plan machining using Process Sheets d) Select appropriate machines, cutting tools & machining parameters viz. Cutting Speed (Vc (mm/rev or mm/minute) & Depth of Cut (DoC) e) Calculate Machining Power requirement Material Removal Rate (MRR) and resulting Speed 	rial available facturing ound Bar/Hex lable reliable m/min), feed
 c) Calculate Machining Fower requirement, Material Kenioval Kate (MKK) and resulting S using online machining calculators available on cutting tools manufacturers sites f) Select appropriate surface finishing process for surface protection for Surface treatment/fin component manufactured above processes using grinding/ cylindrical grinding / but burnishing operation g) Estimate material & machining costs 	hishing of any ffing/honing/
Experiment 3	04 hrs.
 Fabrication of a component by joining two similar or dissimilar metals using TIG, MIG, or techniques. a) Comparative study of soldering, brazing & welding processes and respective applic b) Study of defects and case studies 	gas welding cations
Exemplars / Practical Applications Automotive exhaust system fabrication, Aerospace frame assembly, Bicycle frame weldir piping and tubing fabrication, Custom metal furniture manufacturing	ng, Industrial
Experiment 4	04 hrs.
 Manufacturing one engineering component using casting/forging in available worksho any engineering material like wax, tin, etc. OR 	p facilities of
1. Observe and demonstrate the manufacturing processes of castings and forgings during visit.	an industrial
 Casting considerations, study of defects in the cast product. Demonstration of defects/temperature distributions using suitable mold flow analysis simulations. 	or equivalent
4. Industrial visit report in case of demonstration	

Exemplars / Practical Applications

Prototype component casting, Decorative metal item fabrication, Educational model making, Small gear or

pulley forging, Custom bracket manufacturing

Experiment 5	04 hrs.

- 1. Calculation on sheet metal layout, finishing process of sheet metal parts.
- 2. Manufacture a simple component using a press machine involving operations such as punching, blanking, bending, and shearing, using any suitable engineering material.

OR

2. Observe and demonstrate the manufacturing processes of sheet metal components during an industrial visit.

Experiment 6

02 hrs.

Self-study – Students will choose an engineering-related domestic product composed of at least 4–5 components and prepare detailed material selection and manufacturing plans, considering a broad range of materials including ferrous and non-ferrous metals, as well as non-metallic materials.

* Students are required to prepare a brief report summarizing the processes studied throughout the course and providing a cost analysis related to the selected project.

Students are expected to select available products viz.

- i. Domestic products viz. Oven/Microwave/Blender/Cooker/Kitchen Sink, Kettle, etc.
- **ii.** Robotic floor cleaner, Electric razors, etc.
- iii. Ceiling fans/table fan/exhaust fans, etc.

***Note: Students can choose engineering products of their interest consisting of 4-5 components manufactured by verity of manufacturing processes and materials.

Teaching Scheme Credit Examination Scheme						
Theory	1 Hours/Week		ССЕ	CF 15 Marks		
Practical	2 Hours/Week	2	End Sem	35 Mar	·ks	
Prerequisite Cour	ses, if any:					
• UHV-1 of S	Student Induction Pro	ogram (SI	P) (desirable)			
 Course Objectives: To HELP the students develop a holistic, humane world-vision, and appreciate the essential complementarity between values and skills to ensure mutual happiness and prosperity To ELABORATE on 'Self-exploration' as the process for Value Education To FACILITATE the understanding of harmony at various levels starting from self and going towards family and society. To ELABORATE on the salient aspects of harmony in nature and the entire existence To EXPLAIN how the Right understanding forms the basis of Universal human values and definitiveness of Ethical human conduct. To PROVIDE the vision for a holistic way of living and facilitate transition from chaotic life to an orderly life. Course Outcomes: After successful completion of the course, learner will be able to: CO1- RECOGNIZE the concept of self-exploration as the process of value education and see they have the potential to explore on their own right. CO2- EXPLAIN relationship between one self and the other self as the essential part of relationship and harmony in the family CO4- INTERPRET the interconnectedness, harmony and mutual fulfilment inherent in the nature and the entire existence CO5- DRAW ethical conclusions in the light of Right understanding facilitating the development of holistic 						
		Cour	rse Contents			
Unit I Intro	duction to Value Ed	lucation			(03 Hours)	
 Understanding Value Education Self-exploration as the Process for Value Education Continuous Happiness and Prosperity - the Basic Human Aspirations and their Fulfilment Right Understanding, Relationship and Physical Facility Happiness and Prosperity - Current Scenario Method to Fulfil the Basic Human Aspirations 						
Exemplars / Pract	ical Applications	tical No	1 2 3 4

Due etient 1	List of Practicals			
Practical 1:	s and failures, your aspirations from life. How do you expect to fulfil these	elf, family, friends,		
achievements and failures, your aspirations from life. How do you expect to fulfil these aspirations and live				
Expected Or	innent:	other and with the		
teacher and start appreciating the need and relevance of the course				
Practical 2:	Exploring Human Consciousness Watch and discuss the documentary vide	to "Story of Stuff".		
http://storyofstuff.org/movies/story-of-stuff)				
<i>Expected Outcome</i> : The students start finding that right understanding is the basic need of human being:				
followed by relationship and physical facility. They also start feeling that lack of understanding of human				
values is the	root cause	or normali		
Practical 3: Exploring right understanding Make a list of your desires. Now for each item on the list, find out what would be necessary to fulfil it, i.e. will it require: (a) Right understanding? (b) Relationship (right feeling)? (c) Physical facility?

Expected Outcome: Students start feeling that lack of understanding of human values is the root cause of all problems and the sustained solution could emerge only through understanding of human values and value-based living.

Practical 4: Exploring Natural Acceptance Observation within the faculty of 'Natural Acceptance', based on which you can verify what is right or what is not right for you. Make a list of the problems in your family. For each problem, find out the most significant reason: is it related to lack of right understanding, lack of feelings in relationship or lack of physical facility? Also, find out how much time and effort you have devoted for each in the last one week.

Expected Outcome: The students are able to see that self-verification must be based on their natural acceptance. In many cases, their actual living is not in accordance with their natural acceptance. In addition, lack of feeling in relationship is the major cause of problems in their family and with friends.

Practical 5: Exploring the difference of Needs of Self and Body Take the list of desires you made in Practical 2. Update it if required. Now classify the desires as being related to the need of the Self or need of the Body.

Expected Outcome: The students are able to relate their desires to need of the Self and the Body distinctly. They are able to see that the Self and the Body are two distinct realities, and large parts of their desires are related to the need of the Self (and not the Body).

Practical 6: Exploring Sources of Imagination in the Self Recall the times that your body has been ill (in disharmony) in the last 3 years. What steps were taken to restore the harmony of the Body? If you were to take full responsibility for your body, (i.e. you had the feeling of self-regulation), what kind of daily schedule would you have? Approximately how much time would you allocate for keeping your body in good health? *Expected Outcome*: The students are able to list down activities related to proper upkeep of the Body and practice them in their daily routine. They are also able to appreciate the plants growing in and around the campus, which can be beneficial in maintaining their health and even curing common ailments.

Practical 7: Exploring the Feeling of Trust Show & discuss the video "Right Here Right Now". It is a short film directed by Anand Gandhi about human behavior and its propagation.

Part 1: <u>https://www.youtube.com/watch?v=OVAokeqQuFM</u>

Part 2: <u>https://www.youtube.com/watch?v=gIYJePEnvUY</u>).

Expected Outcome: The students are able to see that the natural acceptance (intention) of everyone is to be happy and make others happy! It is the competence is lacking in themselves and in others. They are able to distinguish between reaction and response, appreciate the need for 100% response in human interaction and make effort towards it.

Practical 8: Exploring the Feeling of Respect List out ten or more of your interactions with other people in your family and friends in the last one week. Now analyze these interactions were over-evaluation, under/ otherwise evaluation or right evaluation of the other? In each interaction, were you comfortable within, uncomfortable within or unaware of your state?

Expected Outcome: The students are able to see that respect is the right evaluation (of intention and competence). Only right evaluation leads to fulfillment in relationship. Over evaluation leads to ego and under/otherwise evaluation leads to depression.

Practical 9: Exploring Systems to fulfil Human Goal Assuming that you would like to see your hostel/ educational institution/ workplace/ neighborhood as a model of human society, write down its goal(s) and the system to achieve these goals.

Expected Outcome: The students are able to see that as a family, a society, the comprehensive human goal is naturally acceptable to all. They are able to see that the systems required for their fulfilment include; Education-Sanskar, Health Self-regulation, Production-Work, Justice-Preservation and Exchange-Storage. Meaningful participation by every individual, every family, every family cluster... every village, town, city... country and the whole world is required in these systems for the human goals to be fulfilled.

Practical 10: Exploring the Four Orders of Nature Watch and discuss the documentary video "An Inconvenient Truth". It is about global climate change presented by Former US Vice President Al Gore. He raises the question "What were you doing when you had the time to do something?" (Source: <u>http://an-inconvenient-truth.com/</u>)

Expected Outcome: The students are able to appreciate the interconnectedness, interdependence and the relationship of mutual fulfilment existing in nature. They are able to see that they have a natural acceptance to participate in a mutually fulfilling manner in nature.

Practical 11: Exploring Co-existence in Existence Observe your Self. Are you in space? Are you getting energy from the body? Is your energy dependent on the body? When your body is sick, does your energy to think diminish? Are you energized in space? Is the body dictating you? Are you self-organized in space? *Expected Outcome*: The students are able to obtain a holistic vision about the existence. It is in the form of co-existence, rather than a chaos. Every unit is energized, self-organized and is participating with other units in an orderly manner for mutual-fulfilment. It is only the human being without right understanding, which is violating this underlying co-existence. They are able to appreciate the need to understand the co-existence in existence.

Practical 12: Exploring Ethical Human Conduct Watch and discuss the video "Hiware Bazaar". It is a documentary about a progressive village in Maharashtra, India about how good governance, along with the people of the village have made significant change in their society

(Source: https://www.youtube.com/watch?v=cb0Qvh9BJ0s)

Expected Outcome: The students are able to clearly visualize the co-relation between lack of Human Values and the prevailing problems. They are also able to visualize tangible steps and a roadmap for moving in the cherished direction – for a humane society.

Practical 13: Exploring Humanistic Models in Education By careful analysis, identify some important features to make our education more humanistic. What are the right expectations in terms of the outcome from humanistic education? Explain with justification.

Expected Outcome: The students are able to detail out various social systems essential for their own fulfilment, as well as the fulfilment of future generations. In particular, they are able to visualize the education system required for individual, and then societal transformation. They are also able to appreciate those many efforts made in the tradition that were in line with desirable human goals. Thus, they are able to learn from tradition and develop a deep sense of gratitude for the effort, for the people, for the tradition, culture etc.

Practical 14: Exploring Steps of Transition towards Universal Human Order Suggest ways in which you can use your knowledge of Technology/ Engineering/ Management/Medicine etc. for universal human order, from your family order to the world family order. Evaluate your state before and after the course in terms of (a) Thought (b) Behavior (c) Work (d) Realization

Expected Outcome: The students are able to visualize an appropriate utilization of the knowledge in their respective streams to ensure mutually enriching and sustainable systems. They are able to sincerely evaluate the course and the transformation achieved in this process. They are also able to make use of this understanding for moving towards a happy and prosperous life, including an ethical conduct of their profession

Experiment 02

- 1. Experimental verification of flexural formula in bending for cantilever and simply supported beam using strain gauges.
- 2. Case study on cantilever and simply supported structures and their failure.

Exemplars / Practical Applications

Quality Control in Beam Manufacturing (Steel, Aluminum, Concrete): Testing - standard beam sections (e.g., I-beams, T-beams) to verify mechanical properties before deployment. Design Validation in Mechanical Engineering Structures: Used in verifying the stress/strain profile in machine components like

support arms, robotic limbs, or levers.

Experiment 03

- **1.** Conduction of torsional/ shear test on ductile material
- 2. Case study on part failure under torsion/shear

Exemplars / Practical Applications

Design and Validation of Shafts in Mechanical Systems: Drive shafts, crankshafts, camshafts, and axles in vehicles and machines Fastener and Threaded Component Testing: Bolts, screws, and threaded rods Automotive Powertrain and Steering Component Analysis: Torsion bars, drive shafts, steering knuckles

Experiment 04

- 1. Impact Test for Steel, Aluminum, Brass and Copper(Charpy/Izod)
- 2. Failure case studies under impact loading of any one material on which trials conducted

Exemplars / Practical Applications

Quality Control in Structural Steel Fabrication: Steel used in Bridges, high-rise buildings, offshore platforms Crashworthiness in Automotive Components: Aluminum, Steel, Brass used in Bumpers, crash zones, engine mounts, control arms

Experiment 05

- 1. Test of Creep, Fatigue and Fluorescence Microscope using simulator
- 2. Case studies of any one tested

Exemplars / Practical Applications

Creep Testing (Using Simulators): Turbine Blades in Jet Engines and Power Plants, Boiler Tubes and Steam Pipes Fatigue Testing (Using Simulators): Aircraft Wings and Fuselage Panels, Automotive Suspension and Chassis, Railway Tracks and Wheels Fluorescence Microscopy (Using Simulators): Material Science (Fluorescent Dye Penetrant)

Experiment 06

- 1. Material Hardness measurement using Brinell's / Vicker's / Rockwell / Poldi's Hardness testing set up. Test samples should be before and after case harden and core harden heat treatment
- 2. Visit to heat treatment plant/lab for hardening process.

Exemplars / Practical Applications

Quality Control in Gear Manufacturing: Test Sample: Steel gears before and after case hardening Inspection of Automotive Components (Camshafts, Crankshafts): Forged shafts after core hardening and induction hardening Heat Treatment Verification in Structural Steel Plates and Beams: Steel plate samples before and after quench and temper

Experiment 07

- 1. Analysis of given sample using any one of the Non-destructive tests: Dye Penetrant Test/ Magnetic Particle test/ Ultrasonic Test.
- 2. Samples can be collected from various failures occurring with automobiles, machine parts, household appliances, etc and analysis of parts failed.

Exemplars / Practical Applications

Dye Penetrant Test (DPT) – For Surface Crack Detection: Inspection of Welded Joints in Pressure Vessels Magnetic Particle Test (MPT) – For Surface & Near-Surface Flaw: Rail Axle and Wheel Shaft Inspection made up of Ferromagnetic materials like carbon steel ,Ultrasonic Test (UT) – For Internal Defect Detection: Inspection of Structural Steel in Bridges

Experiment 08

- 1. Interpretation and Drawing of Microstructures of Ferrous (Steel, cast iron) and Non-ferrous materials (Aluminum, nickel) of various compositions. Identified microstructures can be used for interpretation of material compositions
- 2. Visit to test lab for Reading and interpretation of standard material test report (certificate) of ferrous and non-ferrous materials (These test reports can be availed from Workshop, Industry)

Exemplars / Practical Applications

FERROUS MATERIALS: Low Carbon Steel (<0.25% C) - Ferrite + small amount of pearlite, Medium Carbon Steel (0.25-0.6% C) - Increased pearlite + ferrite, High Carbon Steel (>0.6% C) - Predominantly pearlite with some cementite, Gray Cast Iron - Graphite flakes in a pearlitic or ferritic matrix, White Cast Iron - Cementite and pearlite, no graphite

Experiment 09

- 1. Case study on material selection considering functional and environmental requirements
- 2. Identify various ASTM standards used or required in this case study and make comprehensive report of it

Exemplars / Practical Applications

Bicycle Frame Design for Urban Commuters : Functional Requirements: Lightweight, Corrosion resistant, Affordable Environmental Requirements: Recyclable material, Low manufacturing emissions Material Chosen: Aluminum, bamboo, or recycled steel: Sustainable transport, green mobility programs

Automotive Body Panel Design: Functional Requirements: High strength-to-weight ratio, good formability and crash resistance, Corrosion resistance Environmental Requirements: Low CO₂ footprint during production, Recyclability at end-of-life Material Chosen: Aluminum alloy or advanced high-strength steel (AHSS) : Used by companies like Ford and BMW in lightweight vehicle design

Wind Turbine Blade Material: Functional Requirements: High fatigue strength, Lightweight, Weather and UV resistance Environmental Requirements: Low embodied energy, Possibility for recyclable or bio-based composites Material Chosen: Glass fiber-reinforced polymer (GFRP) with epoxy or bio-resins: Used in offshore and onshore wind farms

Experiment 10

- 1. Conduction of any one test on VLab from the list: Tensile Test on Mild steel, Tensile Test on Cast Iron, Compression Test on Mild Steel, Compression Test on Cast Iron, Direct shear test on Mild steel Rod, Direct Shear test on Timber Specimen, Direct shear test on Mild steel Plate, Bending Test on Mild steel, Torsion Test on Mild Steel, flexural formula in bending for simply supported and cantilever beam, stress strain measurement through strain gauge, torsion formula for bar, flexural formula validation through other software.
- 2. Each student should have different load condition and case study of failure of such loading condition. *** All destructive and non-destructive tests shall be performed as per applicable ASTM / BIS standards

Savitribai Phule Pune University Second Year of Mechanical Engineering (2024 Pattern) MDM-209-MEC: Electrical/ Electronics and Computer Interfacing Technology Lab

			-	0		
Teaching Scheme		Credit	Examination Scheme			
Theory	NA	1	ССЕ	NA		
Practical	2 Hours/Week	ł	Practical	50 Marks		
Prerequisite Courses, if any:						

- Basics of Electrical and Electronics Engineering
- Fundamentals of Programming (C/C++ or Python)
- Engineering Physics

Course Objectives:

- 1. To INTRODUCE students to microcontroller programming and interfacing with digital and analog components.
- 2. To EQUIP students with skills for data acquisition and processing from various sensors (temperature, distance, etc.).
- 3. To TEACH students motor control techniques using microcontrollers for precise actuation and automation.
- 4. To ENABLE students to design and implement integrated systems that demonstrate real-world automation applications..

Course Outcomes:

After successful completion of the course, learner will be able to:

CO1: IDENTIFY and DEMONSTRATE the use of microcontroller-based input/output interfacing techniques.

CO2: DEVELOP programs to acquire and process data from analog and digital sensors.

CO3: IMPLEMENT control strategies for actuators such as DC, stepper, and servo motors using microcontrollers.

CO4: DESIGN and INTEGRATE sensor-actuator systems to create basic automation projects

List of Experiments

Experiment 1 Introduction to Arduino and Digital I/O Control

Objective: To understand digital input/output operations by interfacing LEDs and push buttons with Arduino.

Task:

- 1. Connect LEDs and push buttons to Arduino.
- 2. Write a program to turn LEDs ON/OFF based on button press.
- 3. Observe the response on the Serial Monitor.

Exemplars

- 1. **Industrial Sensor Monitoring** Reading digital signals from sensors to track machine or process status.
- 2. Automated Machine Control Controlling actuators like motors and relays for automation tasks using digital outputs.

Experiment 2 | Analog Sensor Interfacing (Temperature Sensor -LM35)

Objective: To interface the LM35 analog temperature sensor with Arduino and display the output on Serial Monitor or LCD

Task:

- 1. Connect LM35 to Arduino analog pin.
- 2. Write code to read and convert analog voltage to Celsius.
- 3. Display output on Serial Monitor or LCD.

Exemplars / Practical Applications

- 1. **Temperature Monitoring Systems** Continuously measure and log ambient or equipment temperature in industrial environments.
- 2. **HVAC Control Systems** Regulate heating, ventilation, and air conditioning based on real-time temperature readings.

Experiment 3 Interfacing Potentiometer for Position Control Simulation

Objective: To simulate position control by using a potentiometer as analog input to drive a servo motor. **Task**:

- 1. Connect potentiometer to Arduino analog input and servo to PWM output.
- 2. Map the potentiometer values to servo angles.
- 3. Observe servo position change as potentiometer is rotated.

Exemplars

- 1. **Robotic Arm Position Control** Simulate and control joint angles using potentiometer feedback.
- 2. **Motorized Valve Positioning** Adjust and monitor valve positions in process control systems using potentiometer input.

Experiment 4 Interfacing IR or Ultrasonic Sensor for Distance Measurement

Objective: To measure distance using an ultrasonic sensor and display results on LCD or Serial Monitor **Task**:

- 1. Connect HC-SR04 sensor to Arduino.
- 2. Write code to calculate distance using time of flight.
- 3. Display output in cm on LCD or Serial Monitor

Exemplars / Practical Applications

- 1. **Obstacle Detection in Automation Systems** Detect objects or barriers in conveyor or robotic systems using distance sensors.
- 2. Level Measurement in Tanks Measure fluid or material levels in storage tanks using non-contact distance sensing.

Experiment 5 Controlling DC Motor Using Transistor Driver Circuit

Objective: To control a DC motor's speed using PWM output from Arduino through a transistor driver circuit.

Task:

- 1. Connect DC motor through to Arduino.
- 2. Use analogWrite() to vary motor speed.
- 3. Implement a simple ramp-up or potentiometer-based speed control.

Exemplars / Practical Applications

- 1. **Conveyor Belt Speed Control** Regulate the speed of DC motors driving conveyor belts in manufacturing lines.
- 2. **Cooling Fan Control in Equipment** Control the operation of DC cooling fans based on temperature or system load.

Experiment 6 | Data Logging Using Arduino and Excel (Serial Communication)

Objective: To log real-time sensor data from Arduino to a computer using PLX-DAQ or Python and visualize it

Task:

- 1. Write Arduino code to send temperature data from LM35 over serial.
- 2. Use Excel + PLX-DAQ or Python to capture and save the data.
- 3. Plot data over time (optional)

Exemplars:

- 1. **Industrial Process Monitoring** Record sensor data like temperature, pressure, or humidity for analysis and quality control.
- 2. **Preventive Maintenance Tracking** Log equipment usage data to predict and schedule maintenance activities.

Experiment 7 | Stepper Motor Control via Microcontroller

Objective: To control the rotation and direction of a stepper motor using Arduino and a ULN2003 driver. **Task**:

- 1. Connect stepper motor and driver to Arduino.
- 2. Write code to rotate motor clockwise and counter-clockwise.
- 3. Vary delay to change motor speed.

Exemplars / Practical Applications

- 1. CNC Machine Axis Control Precisely control linear or rotary motion of machine tool axes using stepper motors.
- 2. 3D Printer Mechanism Drive the print head and bed movement for accurate layer-by-layer fabrication

Experiment 8 | Mini Project – Interfacing a Mechanical System

Objective: To design and implement a mini project using sensors and actuators interfaced with Arduino for a mechanical application.

Task:

- 1. Choose a mini project (e.g., line follower, fan control, smart gate).
- 2. Design circuit and write control code.
- 3. Demonstrate and document system functionality.

Exemplars

- 1. Automated Sorting System Use sensors and actuators to sort products based on size, shape, or weight on a conveyor belt.
- 2. **Robotic Arm Control** Interface a robotic arm with a microcontroller for tasks like assembly, pick-and-place, or material handling.
- 3. Automated Packaging System Control mechanical systems for packaging items, including labeling, sealing, and stacking.
- 4. **Precision Manufacturing** Integrate mechanical systems with sensors for precision machining or assembly in manufacturing lines.

(*Example provided above for understanding; you may choose any real-life application other than this)

Learning Resources

Text Books:

"Exploring Arduino: Tools and Techniques for Engineering Wizardry" by Jeremy Blum, Wiley

Reference Books:

- 1. "Getting Started with Arduino" by Massimo Banzi, Maker Media
- 2. "The 8051 Microcontroller and Embedded Systems" by Muhammad Ali Mazidi
- 3. "Programming Arduino: Getting Started with Sketches" by Simon Monk

 - b) Microcontroller Series

Real World Problem Statements (Any One assignment)

- 1. **Design and implement a line-following robotic system** to automate material transportation in smart warehouses and delivery environments, enabling efficient and hands-free logistics management.
- 2. **Develop an automated object counting system** for packaging lines, capable of accurately tracking the number of products moving along a conveyor belt without manual supervision.
- 3. Create an intelligent temperature-controlled fan system suitable for industrial workshops or smart homes, designed to maintain optimal environmental conditions for enhanced comfort, productivity, and safety.

Course Contents

Implementation

• A group of 3 to 4 students or a single student could be assigned for a particular habitation or village or municipal ward, as far as possible, in the near vicinity of their place of stay/college premise.

• Each group is allotted to a faculty member of the department as a mentor.

• The group of students will be associated with a government official / village authorities /NGOs etc. concerned, allotted by the district administration, during the duration of the project.

• The Community Engagement Project should be different from the regular programmes of NSS/NCC/Green Club/Hobby Clubs, Special Interests Groups etc

• An activity book has to be maintained by each of the students to record the activities undertaken/involved and will be countersigned by the concerned mentor/HoD.

• Project report shall be submitted by each student/group of students.

• An internal evaluation shall also be conducted by a committee constituted by the HoD. Evaluation to be done based on the active participation of the student and marks could be awarded by the mentor/HoD.

• Students groups can conduct an awareness programme on Health and Hygiene or in Organic Farming or in Fisheries or in advocating prohibition of liquor or about renewable energy, e-waste management or any other activity in an area of their studies and as per his/her aptitude

Suggestive list of topics under Community Engagement Project

The below lists are not exhaustive and open for HoD's or mentors to add, delete or modify. It is expected that the focus should be on specific local issues in their nearby areas. The students are expected to carry out these projects with involvement, commitment, responsibility and accountability. The mentors of a student/group of students shall

1. Use/ miss-use of cell phones

- 2. Career orientation of youth
- 3. Water facilities and drinking water availability
- 4. Health and hygiene of the school going students, home makers and old personals
- 5. Health intervention and awareness programmes
- 6. Horticulture
- 7. Herbal and Nutrition
- 8. Traditional and Modern health care methods
- 9. Food habits
- 10. Air /Sound /Water pollution
- 11. Plantation and Soil protection
- 12. Renewable energy and Solar Systems
- 13. Yoga awareness and practice
- 14. Health care awareness programmes and their impact
- 15. Organic farming
- 16. Food adulteration
- 17. Incidence of Diabetes and other chronic diseases
- 18. Blood groups and blood levels
- 19. Chemicals in daily life
- 20. Music and dance
- 21. Women education and empowerment

Project Scope

• Conduct workshops or awareness drives on topics like digital literacy, environmental sustainability, mental health, or career planning for local stakeholders.

• Develop a simple prototype or solution that addresses a real-world problem (e.g., a water-saving device, simple mobile apps, or tools for community use).

- Organize clean-up drives, tree plantations, recycling campaigns, or energy conservation initiatives.
- Promote health through awareness programs on hygiene, nutrition, and exercise.
- Teach basic computer or technical skills to students, staff, or the community

Proposal Submission

CEP Group should Submit a two-page project proposal, preferably prior to the term commencement outlining the following:-

- Title of the project
- Aim, Objective and expected outcome
- Plan of execution (timeline and activities).
- Place of the CEP and involvement of any local authority, NGP
- Required resources (if any).
- Get approval from the designated faculty mentor.

venturimete	r used in Agriculture, in carburetor, electrical analogy					
Unit III	Internal Flow	(07 Hours)				
Laminar flow: Entrance region theory, velocity and shear Stress distribution for laminar flow through pipe,						
fixed parallel plates(Field Assignment) and Couette flow(Field Assignment), velocity profile of turbulent						
flow.						
Losses - maj	or & minor losses (without expressions), hydro dynamically smooth and	rough boundaries,				
Moody's cha	rt, compounding of pipes & equivalent pipe, siphons, transmission of	of power. (Field				
Assignment)						
Real World	Assignment					
1. Des	sign an efficient water distribution system in home/society, minimizing pres	sure losses and				
leal	Kages.					
2. Th 3. Wa	ter leakage in wall.					
4. Des	sign a Siphon to take water from open channel.					
Exemplars	* *					
Power absorb	ed in bearings, municipal water distribution to society/ home, Hydroelectric	c power plant				
Unit IV	External Flow	(07 Hours)				
Boundary lay	er formation over a flat plate, boundary layer thickness, displacement thic	kness, momentum				
thickness and	energy thickness, boundary layer separation and methods to control separation	ation, drag and lift				
concepts, typ	es of drag, drag & lift coefficient, aerofoil, bluff body, streamline body					
Real World	Assignment					
1. Optin	nize the front-end shape of an electric vehicle to ensure it behaves more like a	a streamlined body,				
reduc	ing energy consumption.					
2. Analy	sis of Commercial Jeep and Sports Car for its stream lined body and	d reducing energy				
consu	mption.					
3. Surve	y report on applications of Boundary layer Separation					
Exemplars	~ · · · · · · · ·					
Cricket Ball S	Swinging. Aero plane, bird's wing					
Unit V	Dimensional Analysis	(07 Hours)				
Dimensional	Analysis: Introduction, system of dimensions, Dimensional homogeneit	y, Buckingham-Pi				
Theorem, rep	eating variables, dimensionless numbers and their physical significance					
Similitude & Model Testing: Model & prototype, similarity, scaling parameters, model laws, objectives,						
importance and application of model studies.						
Real World	Assignment					
1. Derive a ge	eneralized formula for drag force acting on a car moving at high speed.					
2. Apply Rey	nolds number similarity to design a miniature wind turbine for testing befor	e				
manufacturin	g full-scale blades					
Exemplars	Exemplars					

Turbine model, wind tunnel model test, irrigation system, dam model analysis

L

Foundry and casting industries, Automotive engine block manufacturing, Aerospace component fabrication, Heavy machinery and equipment production, Jewelry and art casting

Unit III	Metal Forming Technology	(08 Hours)				
Introduction to Metal Forming- Stress-Strain Analysis in Metal Forming, Bulk Deformation Processes,						
Defects in Metal Forming,						
Rolling: Type	es, defects, and applications, Rolling force estimation, Torque and power re	equirements				
for rolling mi	lls un die Classed die and Improvesion die famine Estimation of Espeine Lood	l voin a				
Forging: Ope	mation energy equation	using				
Sheet Metal	Working: Types of sheet metal operations. Press working equipment and to	erminology.				
design of sin	ple progressive die: strip lay-out and percentage utilization, clearance	analysis, centre of				
pressure, estin	nation of cutting forces and press capacity	ja a ja				
Real World	Assignment					
Load calculat	ion for open-die forging and closed-die forging or Design of simple drawin	g dies				
Exemplars /	Practical Applications					
Metal formin	g in automotive manufacturing, Rolling mills in steel production, Forg	ging of aerospace				
components,	Sheet metal fabrication in appliance industry, Press working in electronics	manufacturing				
Unit IV	Joining Technology	(06 Hours)				
Joining proce	ss classification, soldering, brazing, welding symbols, types of joint, Ele	ctrodes- types and				
purpose of ele	ectrodes, electrode coatings (flux), welding defects, testing and inspection	of welds, Working				
principles, ap	plications of welding processes: Arc welding: MIG, TIG, Resistance we	lding: Spot, Seam,				
Heat generati	on in resistance weiding, Gas weiding: Types of flames, oxy-acetylene	gas weiding. Solid				
arc welding t	respection welding, Modern welding Processes. Laser welding plasma arc w	/elding, submerged				
Real World	Assignment					
Appropriate s	election of non-conventional welding process for particular applications lik	e plasma arc				
welding, subr	nerged arc welding, projection welding, electron beam welding, ultrasonic	welding				
Exemplars /	Practical Applications					
Welding in a	automotive assembly, Construction and infrastructure fabrication, Ship	building industry,				
Aerospace co	mponent joining, Electronic device manufacturing					
Unit V	Finishing and Fine finishing processes	(06 Hours)				
Grinding Pro	ocess: Introduction, types of grinding machines, Grinding wheel: Introduct	tion, types, shapes,				
designation a	nd selection, grit, grade & structure of wheels, mounting, glazing, loading	g, dressing, truing,				
balancing, Su	rface Finish Measuring Instruments.					
Advanced Fine finishing processes: (Construction, working and process parameters) Introduction to						
Honing and Lapping, Magnetic abrasive finishing, Ultrasonic finishing, Abrasive flow machining.						
Real World Assignment						
1. Machining time calculation for cylindrical and plunge grinding,						
2. Appropriate selection finishing process for given application						
Exemplars /	Practical Applications					
Precision surf	ace finishing in automotive parts, Tool and die manufacturing, Aerospace	component				
finishing, Me	dical device polishing, Electronics and semiconductor wafer processing

Course Objective 1. To STUDY 2. To PROVID 3. To UNDER 4. To ESTIMA 5. To DETER	vs: working of engine, A DE in-depth knowled RSTAND Combustion ATE performance particular	Actual, Fu ge of IC e i in SI and cameters b	el-Air and Air standard cycle engine thermodynamics and c I CI engines and factors affect by conducting a test on I. C. H	e and its I combustio cting perfo Engines.	Performance. on techniques. ormance parameters
 5. To DETERMINE performance parameters of Positive displacement compressor Course Outcomes: After successful completion of the course, learner will be able to: CO1. ANALYZE the working principles of IC engines, the effects of fuel-air and actual cycles on engine performance, and the impact of cycle losses. CO2. ASSESS the combustion characteristics in SI and CI engines, the influence of fuel properties on knocking, and the suitability of alternative fuels for improved efficiency and emissions. CO3. EVALUATE engine performance by conducting tests, interpreting characteristic curves, and applying emission control strategies to meet regulatory standards. CO4. INVESTIGATE the functions of ignition, cooling, and lubrication systems, along with advanced IC engine technologies such as EMS, AI-based diagnostics, and HCCI. CO5. APPLY thermodynamic principles to solve problems on reciprocating and rotary compressors, including multi-stage compression and FAD. 					
 Fundamentals of IC Engines: Heat Engine, Engine classification, Applications, I.C. Engine construction - components and materials, Engine nomenclature, Valve timing diagram, Intake and exhaust system. Fuel, Air and Actual Cycle: Air-standard cycles- Otto, Diesel & Dual Cycle (Derivation of Efficiencies & MEP), fuel air cycles, and actual cycles, Effects of variables on performance, various losses and Comparison of Air standard with Fuel and Actual cycle. (Numerical on Air-standard cycles) Real World Assignment Identification of different components of recent modern IC Engines (workshop/ Garage). Case Study on selection of engine for various applications (e.g. Marine, sports, aircraft, etc). 					
Practical Applications Used in different engine types for efficiency optimization in vehicles, power plants, and Automotive industrial engines.					
Unit II Con	nbustion in IC Engi	nes & Fu	el Technology		(07 Hours)
Combustion in IC Engines: Fuel injection system in SI & CI Engines Combustion in SI and CI engines and factors affecting efficiency, Knocking in SI and CI engines, Combustion Chambers used in SI & CI Engine. Fuel Technology: Biofuels, hydrogen, synthetic fuels, LPG, CNG, ethanol blends. Role of octane and cetane numbers, fuel additives.					

Real World Assignment

- 1. Study of alternative fuels as a replacement to petro-diesel.
- 2. Case study on modern fuel injection system used in two wheeler/ four wheeler.

Practical Applications

- 1. Used in modern Petrol & Diesel engines to improve fuel efficiency and Emissions.
- 2. Used in diesel generators, agricultural machinery, and marine diesel engines.
- 3. Biodiesel & hydrogen fuel used in transportation fleets to reduce carbon footprint..

Unit IIIEngine Performance & Testing, Emission Control Technologies(07 Hours)

Engine Testing Procedure and Engine parameters, Measurement of indicated power, Brake power, fuel consumption, Air Consumption, Measurement of friction power by Willan's Line Method and Morse Test, calculation of mean effective pressure, various efficiencies, specific fuel consumption, heat balance sheet of IC Engines and performance Characteristic curves. (Numerical on Engine parameters & HBS). Role of supercharging and turbocharging in engine performance improvement.

Emission Control Technologies: Pollutants from engines- CO, HC, NOx, PM, and their impact on air quality, Emission reduction strategies: Exhaust Gas Recirculation (EGR), Selective Catalytic Reduction (SCR), Diesel Particulate Filters (DPF), Three-Way Catalysts (TWC), BS-VI and Euro 6 emission standards

Real World Assignment

- 1. Analyzing the various engine parameters which affect performance and emission characteristics.
- 2. Case study on Revolutionizing Carbon Management: Generation, Emission Control, Capture, and Reuse.

Practical Applications

- 1. The selection of IC Engines according to their specifications and performance for different applications such as automotive, aviation, power generation, marine, and industrial machinery.
- 2. Used in Power generation, construction, and marine sectors have adopted DPF, TWC, and BS-VI/Euro 6 emission standards to meet stringent environmental regulations.

Unit IV	Engine Systems & Recent Trends in I.C Engine	

(07 Hours)

Ignition system: battery coil ignition system, magneto ignition system, Electronics Ignition (CDI- Capacitor Discharge Igniter, TCI-Transistor Controlled Igniter).

Cooling system: Air Cooling, Liquid cooling.

Lubrication system: Objectives of lubrication system, properties of lubricant, Methods of lubrication system,

Recent Trends in IC Engine: Introduction to engine management systems (EMS) and ECU-controlled ignition, Advanced combustion technologies: HCCI (Homogeneous Charge Compression Ignition), AI-based predictive maintenance, fault diagnosis, and digital twins in IC engines..

Real World Assignment

- 1. Case study on real world applications where AI & IoT have improved IC Engine performance.
- 2. Develop a DIY model for any of the system (Ignition, Cooling, Lubrication)

Practical Applications

Automotive Industry – Used in cars, trucks, and buses for fuel efficiency, emissions control, and performance optimization.

Unit V Positive Displacement Compressor

(07 Hours)

Reciprocating Compressor: Applications of compressed air, single stage compressor (without clearance and with clearance volume), volumetric efficiency, isothermal efficiency, effect of clearance volume, free air delivery (FAD), actual indicator diagram for air compressor, Multi staging of compressor, optimum intermediate pressure, intercooler, after cooler, Capacity control of compressors. (Numerical). **Rotary Compressors:** Roots blower, Vane type, Screw compressor and Scroll compressor.

Real World Assignment

- 1. Study manufacturer catalogues, compare different compressor models and select the most suitable one for a given industrial applications (eg. Pneumatic tools, refrigeration, manufacturing etc).
- 2. Case study on any rotary compressor with its real world applications.

Practical Applications

Air compressors Used in Manufacturing, pneumatic tools, automotive industry, Workshop tools, HVAC systems, food packaging, Process industries, mining, and chemical plant.

Exemplars / Pract	tical Applications				
Business managem	ent in manufacturin	g firms, Pr	oject management in constru	ction, Or	ganizational design
In 11 companies, H	iuman resource man	agement in	istartups, Operations manage	ment in s	(06 Hours)
Manager: Who is	a Manager? Roles of	f a Manage	r. Skills of an Effective Mana	oger Fun	ctions of a Manager
 Leadership: Defining leadership and its role, leadership Style, Leadership Development, Leadership Behavior. Decision Making: Nature and Process of Decision Making, Decision Making under Certainty and 					
Uncertainty, Decis	ion Making Steps &	Processes,	, Brain-Storming		
Real World Assignment Real Life Case Which will Lead to Evolve Leadership and Decision Making Ability Among the Students					

Exemplars / Practical Applications

Corporate management roles, Team leadership in project management, Executive decision-making in startups, Human resources leadership development, Strategic planning in organizations

Unit III	Motivati	on and Con	nmunicatior	ı			(06 Hours)
Mativation	Concent	Theories	Classical	and Modorn	Importance	Financial	and Nonfinancia

Motivation: Concept, Theories – Classical and Modern, Importance, Financial and Nonfinancial Motivation, Positive and Negative Motivation, Group Motivation.

Communication: Definition, Meaning, Nature, Communication Process, Types and Barriers to Communication.

Real World Assignment

To understand Motivational and Effective Communication Strategies of any Ongoing Project Related to Mechanical Industry (Case Study based Approach)

Exemplars / Practical Applications

Employee motivation programs, Organizational behavior management, Leadership and team motivation, Corporate communication strategies, Change management and internal communication

Unit IV	Planning and Strategic Management	(06 Hours)
---------	-----------------------------------	------------

Planning: Why Management Process Starts With Planning, Steps in Planning, Planning Premises, Types of Planning, Barriers to Effective Planning, Operational Plan, Strategic Planning, Mckinsey's 7's Approach, SWOT Analysis.

Strategic Management : Meaning, Definition, Elements, Scope and Dimensions, Process, Importance, Strategic Decisions

Real World Assignment

Design Production Planning System for Manufacturing Industry / Case of Manufacturing Industry focusing of different functions such as Demand Forecasting, Production Scheduling, Material Management, Capacity Planning, Monitoring and Control

Exemplars / Practical Applications

Corporate strategic planning, Business operations management, Project planning and execution, SWOT analysis in market research, Strategic decision-making in startups

Real World Assignment 1. Predicting Machine Wear & Tear Using Linear Regression					
2. Classification of Defective vs. Non-Defective Components Using SVM					
Practical Applications					
1. Predictive Maintenance Using Regression & Classification					
2. Fault Detection in Rotating Equipment Using Clustering					
Unit IIIFeature Engineering, Development of ML Model & Evaluation(06 Hours)					
Feature Engineering, Model Selection & Tuning: Feature engineering, Model selection, Model tuning,					
Model performance measures, Regularizing the Linear models, ML pipeline, Bootstrap sampling, Grid					
search CV, Randomized search CV, K fold cross-validation.					
Problem identification: classification, clustering, regression, ranking. Steps in ML modeling, Data					
Collection, Data pre-processing, Model Selection, Model training (Training, Testing, K-fold Cross					
Validation), Model evaluation (Accuracy, Precision, Recall, True Positive, False Positive, etc.), Hyper					
parameter Tuning: 1) Probability 2) Hypothesis 3) Confusion Matrix (Common dataset – Common problem					
statement), Influence of Type 1 & Type 2 error					
Real World Assignment					
1. Machine Condition Monitoring Using Feature Engineering 2. Fault Detection Using Confusion Matrix Analysis					
Practical Applications					
1. Predictive Maintenance of Industrial Machines					
2. Optimizing Engine Performance Using Regression Models					
Unit IVReinforced and Deep Learning(06 Hours)					
Neural Network: Introduction to Perceptron & NN, Activation Function & Loss Function, Gradient Descent &					
Gradient Acescent, Batch Normalization, Hyper Parameter Tuning					
Characteristics of reinforced learning; Algorithms: Framework of RL, characteristics, Exploration Vs. Exploitation					
Trade-off, Bellman Optimality Principle, Types of RL: Value Based, Policy Based, Model Based; Positive vs Negative					
Reinforced Learning; Models: Markov Decision Process, Q Learning, SARSA.					
Computer Vision: Introducing Image Dataset, Introduction to CNN, Convolution, Pooling & Padding, CNN Forward					
& Backward Propagation, CNN architectures, Transfer Learning.					
Applications of Reinforced, Computer Vision and Deep Learning in Mechanical Engineering (Jobs), Industry 5.0					
Real World Assignment					
1. Computer Vision-Based Defect Detection in Mechanical Parts					
2. Reinforcement Learning for Robotic Arm Optimization					
1 AL in Automobiles/ Agriculture/ Robotics/ Health science/ Computer Vision for Analysis Quality					
Assessment & Security, etc.					
2. Computer Vision: Object Detection

Savitribai Phule Pune University Second Year of Mechanical Engineering (2024 Pattern)							
VSE-216-MEC: Solid Modeling and Drafting							
Teaching Scheme		Credit	Examination S	Scheme			
Theory	NA		CCE	NA			
Practical	2 Hours/Week	1	Practical	50 Marks			
Prerequisite Course	Prerequisite Courses, if any:						
Course Objectives:							
 Course Objectives: To INTRODUCE the basic principles of solid modeling and computer-aided drafting (CAD) with an emphasis on industry-relevant applications. To IMPART capabilities of solid modeling software for creating 2D drawings and 3D models of mechanical components and assemblies. To INCULCATE understanding abilities of reading, interpreting, and creating standard engineering drawings with appropriate dimensions, tolerances, and annotations according to BIS/ISO standards. To DEVELOP the ability to apply geometric and dimensional constraints in part modeling and to ANALYZE how these constraints influence the design intent and functionality. To DEVELOP ability of visualizing mechanical systems and simulating their motion and interaction using assembly modeling techniques. Course Outcomes: After successful completion of the course, learner will be able to: CO1: APPLY (3) the tools from CAD software's to complete 2D sketches of the mechanical components CO2: BUILD (3) a complete 3D model of components by applying different commands and constraints CO3: CONCLUDE (4) on appropriate constraints between different parts of the assemblies for generating the complete model CO4: CREATE (5) a complete working drawing of mechanical components/Assembly. 							
	I	List of Exp	periments				
Experiment 1 Introduction to CAD Software							
Introduction to user interface of CAD software, Drawing tools (line, circle, arc, polygon, etc.) Modifying tools (move, copy, trim, offset, mirror, etc.) and Constraints Simple sketching of any 5 objects by using the above mentioned commands Exemplars / Practical Applications Mechanical part design, Architectural drafting, Electrical circuit layout, Automotive component modeling, Product prototyping and visualization							
Experiment 2 Part Modeling							
Sketch-based modeling (by using commands like extrude, revolve, sweep, loft etc.) Constraints (geometric and dimensional) Parametric modeling, Analytical modeling, Material and Mass property calculations Creating any 2 simple machine parts by using 3D modeling software and calculation of mass properties by applying suitable material. Exemplars / Practical Applications Automotive body and chassis design, Aerospace structural component modeling, Consumer product design and development, Industrial machinery and equipment design, Architectural modeling and building information modeling (BIM)							
Experiment 3 Asse	embly Modeling						
Types of assemblies constraints, Assembly	Types of assemblies, significance and limitations, Inserting components into an assembly, mates and constraints. Assembly motion and interference checking						

Creating assembly of model consisting of minimum 5 parts (Such as Knuckle joint, Flange coupling, C-

Clamp, Vice etc.)

Exemplars / Practical Applications

Automotive engine assembly design, Aerospace system integration, Consumer electronics product assembly, Industrial machinery assembly planning, Robotics and automation system design

Experiment 4 Drafting from 3D Models

Generating views from 3D parts and assemblies, Exploded views, Bill of Materials (BOM), GD&T symbols, Dimensioning

Generation of 2D working drawings (minimum 2 views) of parts and assembly created in experiment 3 above **Exemplars / Practical Applications**

Automotive manufacturing documentation, Aerospace component assembly instructions, Consumer electronics product manuals, Industrial equipment fabrication, Construction and architectural detailing

Experiment 5 | Surface Modeling

Introduction to surface modeling (patch, loft, and sweep), free form surfacing, creation of closed volume Generation of 3D model by using surface parameters (Such as product casing design, automotive body panel design etc.)

Exemplars / Practical Applications

Automotive exterior and interior design, Aerospace aerodynamic surface modeling, Consumer product casing design, Ship hull and marine structure design, Medical device ergonomic modeling

Guidelines for Instructor's Manual

The instructor's manual is to be developed as a hands-on resource and reference. The instructor's manual needs to include prologue (about University/program/ institute/ department/foreword/ preface etc), copy of curriculum, conduction & Assessment guidelines, topics under consideration- concept, objectives, outcomes, set of typical applications/assignments/ guidelines, and references.

Guidelines for Student's Lab Journal

The laboratory assignments are to be submitted by students in the form of an electronic journal only. Journal consists of prologue, Certificate, table of contents, and model/sketch of each assignment (Title, Objectives, Problem Statement, Outcomes, Software & Hardware requirements, Date of Completion as per applicability. Assessment grade/marks and assessor's sign, As a conscious effort and little contribution towards Green IT and environment awareness, attaching printed papers as part of write-ups and program listing to journals

may be avoided. Use of Drive/Google classroom/Moodle platform containing students programs maintained by lab In-charge is highly encouraged. For reference one or two journals may be maintained with program prints at Laboratory.

Guidelines for Lab /TW Assessment

Continuous assessment of laboratory work is done based on overall performance and lab assignments performance of students. Each lab assignment assessment will assign grade/marks based on parameters with appropriate weightage. Suggested parameters for overall assessment as well as each lab assignment assessment include- timely completion, performance, innovation, efficient codes, punctuality and neatness.

Guidelines for Laboratory Conduction

List of laboratory assignments is provided below for reference. The instructor is expected to frame the assignments by understanding the prerequisites, technological aspects, utility and recent trends related to the topic. The assignment framing policy should address the average students and inclusive of an element to attract and promote the intelligent students. The instructor may set multiple sets of assignments and distribute them among batches of students. It is appreciated if the assignments are based on real world problems/applications. Encourage students for appropriate use of coding style, proper indentation and comments.

Use of open source software and recent versions is to be encouraged.

In addition to these, instructors may assign one real life application in the form of a mini-project. Based on the concepts learned. Instructors may also set one assignment or mini-project that is suitable to each branch beyond the scope of the syllabus.

APPLY environmentally responsible solutions such as green buildings, energy-efficient technologies, and renewable energy sources to promote sustainable living and reduce ecological impact.						
Course Contents						
Unit I Intr	oduction to ESD				(06 Hours)	
Environment, eco	logy, natural resource	es, Air po	llution, Ecological footprint,	Interact	ions between socio-	
economic systems	and eco-systems, Hu	man healt	h and the environment			
Real World Assig	gnment					
1) Weather sur	vey of your region of	last 10 ye	ears			
2) Air pollution and its effect on human health.						

Exemplars / Practical Applications

- 1) Air purifiers
- 2) Air quality index indicators

Unit II	Soil Conservation and Management	(06 Hours)			
Types and causes of soil degradation; Losses of soil moisture and its regulation, Nutrient depletion; impact of soil degradation on agriculture and food production, toxic organic chemicals, and organic contaminants in soils, Fertilizers and fertilizer management, Recycling of soil nutrients. Inorganic and organic components of soils. Biogeochemical cycles – nitrogen, carbon, phosphorus and gulabure					
Sulphul.	asianment				
	Assignment				
2. Effect	of chemical fertilizers on soil biogeochemical cycles and on human health				
Composting of	f organic waste				
Exemplars /	Practical Applications				
1. Conto	pur farming				
2. Strip	forming				
3. Natur	al fertilizers.				
Unit III	Water Sources and Management	(06 Hours)			
Hydrological	cycle and water resources- surface, ground, desalination. Water pollution, I	Integrated water			
resources mai	agement Usage and efficiency				
Real World	Assignment				
Development	of arevwater recycling system				
Exemplare /	Practical Applications				
Li Wotor	acura management in desert area				
1. water					
2. Recyc	ling and reuse of waste water				
3. Rainwater harvesting					
	5

strategies based on findings.

3. Understand and apply break-even analysis to a real-world business scenario.

Second Year	Mechanical Engineering – 2024 Pattern - Faculty of Science and Technology				
Exemplars /	Practical Applications				
Market Struc	ture Analysis for Business Decision Making, Budgeting and Financial Plan	ning, Understanding			
Economic Indicators for Investment Decisions.					
Unit II	Cost Accounting	(05 Hours)			
Introduction	: Importance and difference between cost and financial accounting.				
Cost Accour	ting: Types of costs: Fixed, variable, direct, indirect.				
Costing me	thods: Job costing, process costing. Break-even analysis & budgeting	g for cost control.			
Engineering	Applications: Cost estimation, project budgeting, financial decision-making	ng			
Real World	Assignment				
1. List an	d classify the different types of costs involved in manufacturing a mechanic	al part.			
2. Calcula	ate the cost per unit by considering material cost, labor, and overheads of any	mechanical element.			
Also estin	nate the total cost to produce 500 units.				
3. For the	e nearby industry, using fixed and variable costs, calculate the break-	even point for their			
production setup for any one item and suggest how many items must be sold to cover all costs					
Exemplars / Practical Applications					
All kind of	ndustries where need to prepare standard costing and marginal costing of p	roduct, project based			
costing in E	PC industries.				
Unit III	Financial Accounting	(05 Hours)			
Introduction	: Importance of financial accounting.				
Financial Accounting: Key financial statements: Balance Sheet, Income Statement, Cash Flow Statement.					
Key Financial Terms: Revenue, Cost of Goods Sold (COGS), Operating Expenses like rent, utilities, salaries.					
Depreciation in asset value over time, Capital Expenditure.					
Financial ratios: Profitability, liquidity, efficiency					
Real World Assignment					
1. Prepare financial statement of any organization.					
 Choose a company or firm and analyze its latest financial statements. Prepare a balance sheet for any engineering organization. 					
5. Frepare a balance sheet for any engineering organization. Exemplars / Practical Applications					
Engineering Industries, Banking sectors, Oil Gas industries, NGO for proper planning of cash flow.					
Unit IV	Budget and Budgetary Control	(06 Hours)			
Introduction to Budgeting: Definition, purpose, and importance in engineering and business.					
Introduction	to Budgeting : Definition, purpose, and importance in engineering and bus	iness.			
Introduction Types of bud	to Budgeting : Definition, purpose, and importance in engineering and bus lgets : Fixed, flexible, zero-based, capital, and operational budgets.	iness.			
Introduction Types of bud Budgetary	Ito Budgeting : Definition, purpose, and importance in engineering and bus Igets : Fixed, flexible, zero-based, capital, and operational budgets. Control: Concept and objectives of budgetary control. Steps in budgets	iness. get preparation and			
Introduction Types of bud Budgetary implementati	Ito Budgeting : Definition, purpose, and importance in engineering and bus Igets : Fixed, flexible, zero-based, capital, and operational budgets. Control : Concept and objectives of budgetary control. Steps in budget on. Variance analysis: Comparing actual vs. budgeted performance.	iness. get preparation and			

Engineering Applications: Budgeting in manufacturing and project management. Cost control and resource allocation in engineering firms. Taxes and Financial Planning, Impact of government policies, Taxation and Inflation on Financial Management.

Real World Assignment (Any One)

- 1. Prepare and Interpret Budget and Standard Costs for any real business.
- 2. How can technology improve budget preparation and control? Discuss tools like Excel, ERP systems, or budgeting software.
- 3. How can businesses run against inflation and manage tax burdens efficiently? Suggest your financial strategies.

Exemplars / Practical Applications

To prepare Flexible Budgeting in all Engineering Industries, Zero budgeting in Government sectors, Sales and Operating Budgets for Retail Sector
Second Year Mechanical Engineering – 2024 Pattern - Faculty of Science and Technology		
Unit V	National and International Business and Finance	(06 Hours)
National Income (National Income Accounting – GDP, GNP, Real and Nominal Income) Fiscal Policy (Government Revenue, Expenditure and Financing). Concept of globalization, factors influencing globalization, concept of international business and motives, international trade, institutional framework in international business, the significance of foreign trade policy, export-import procedures.		
Real World	Assignment (Any One)	
 Choose any industry sector and research how GDP growth or decline has affected investments and job opportunities in this sector. Visit an official economic data website (e.g., World Bank, IMF, National Bureau of Statistics) and collect the latest GDP and GNP data of our country. Compare the values and explain your findings about the country's economy. Discuss the need of Foreign Capital and international finance. 		
Exemplars /	Practical Applications	
Nation Excha Invest	nal Financing is needed in Small and Medium Enterprises, Calculation of Conges, Public Infrastructure Projects and International Financing is needed ment (FDI), International Trade Financing, Global Financial Institution.	3DP, National Stock d in Foreign Direct

- 2. Calculate equivalent evaporation
- 3. Prepare an energy balance sheet

- Boiler Trial for Efficiency and Energy Balance:
- Assignment: Calculate and compare energy efficiency for a packaged boiler and a power plant boiler. Suggest improvements based on observed losses

Exemplars / Practical Applications: In steam power plants for power generation. In textile industries for processes like dyeing and finishing fabrics. In food industries for steaming and sterilizing food.

Experiment 03

Performance and Morse Test on multi cylinder Petrol engine.

Description: The performance test provides the overall efficiency and fuel consumption characteristics of the engine. Morse test enables measurement of individual cylinder performance, helping in diagnosing imbalance or poor performance in one or more cylinders

Performance and Morse Test on Petrol Engine:

Assignment: Analyze engine data from a car service center and evaluate the impact of misfiring cylinders on performance using Morse Test logic

Exemplars / Practical Applications:

In automobiles like cars and motorcycles.

In smaller and portable machinery like lawn movers and generators.

Experiment 04

Performance test on Diesel engine and to draw heat balance sheet

Description: The Performance test on Diesel engine provides insight into engine efficiency and energy distribution. A good-performing diesel engine will have brake thermal efficiency around 30–40%, and remaining losses in cooling, exhaust, and radiation.

- 1. To determine brake power, fuel consumption, thermal efficiencies, and specific fuel consumption.
- 2. To prepare a heat balance sheet for the engine.

Performance Test on Diesel Engine (Heat Balance Sheet)

Assignment: Collect real-time data from a generator at your institute and prepare a heat balance sheet comparing theoretical and actual efficiency

Exemplars / Practical Applications: In automobiles like heavy vehicles such as Trucks and buses. In Power plants for generation of power. Tractors and other farm machineries use diesel engines.

Experiment 05

Trial on Multi stage Positive displacement air compressor.

Description: The air compressor trial demonstrates the effectiveness of multi-stage compression in reducing

work input per kg of air and increasing efficiency. Deviations in efficiency point to heat losses, friction, and

imperfect intercooling.

To conduct a trial on a multi-stage positive displacement air compressor in order to determine:

- 1. Volumetric efficiency
- 2. Isothermal efficiency
- 3. Mechanical efficiency
- 4. Power consumption

Multi-stage Positive Displacement Air Compressor:

Assignment: Conduct a case study on the use of multistage compressors in bottling plants or refrigeration units and evaluate energy savings.

Exemplars / Practical Applications: In operating or powering the pneumatic tools in construction and automobile service station and spray painting. In various industries for processes like metal fabrication and

woodworking.

Experiment 06

Determination of Major and Minor Losses in Pipe Lines (Metal / Plastic).

Description: The major losses when the fluid is flowing through the pipe is mainly due to friction and minor losses are due to geometry and pipe fittings. The losses reduce the power transmitting capacity of the flow. Hence the losses should be as minimum as possible

- Major and Minor Losses in Pipelines:
- Assignment: Design a small-scale piping system (e.g. for a water purification unit) and identify areas with potential major/minor losses.

Exemplars / Practical Applications: In food processing industries, chemical industries, piping industries and hydraulic power plants.

Experiment 07

Bernoulli's Theorem experimental Demonstration and verification

Description: When the fluid flows in a horizontal pipe so that there is no change in potential energy or head, then the increase in the fluid velocity is associated with the decrease in fluid pressure.

- Bernoulli's Theorem Demonstration:
- Assignment: Create a video or presentation showing real-life application of Bernoulli's principle in aircraft wing design or carburetors.

Exemplars / Practical Applications: The principle is used in atomizers like perfume bottles. In designing the wings of the aeroplanes.

Experiment 08

Determination of Coefficient of discharge, Coefficient of velocity of venturimeter / orifice meter.

Description: Orifice meter and venturimeter are flow measuring devices. The devices work on the principle of Bernoulli's theorem. The fluid flow rate can be measured by finding the coefficient of discharge and coefficient of velocity of the devices.

Flow Measurement (Venturimeter/Orifice Meter):

Assignment: Compare different flow measurement devices used in municipal water supply systems and justify the use of each based on discharge coefficients.

Exemplars / Practical Applications: For accurate measurement of flow of fluids in pipelines in various industries like chemical processing, Oil and gas, food processing, automotive and aerospace etc.

Experiment 09

Determination of dynamic and kinematic viscosity of any oil using Redwood Viscometer.

Description: Viscosity is the resistance offered by the fluid for its own flow. It quantifies the internal resistance offered by one layer of fluid to the other. The flow rate or velocity of the fluid will be more if the viscosity is less.

Viscosity Using Redwood Viscometer:

Assignment: Collect samples of different lubricants used in automotive workshops and compare their viscosities and suitability for engine parts.

Exemplars / Practical Applications: It is used in selection of lubricants, hydraulic brake system, coating and spray painting. In manufacturing processes like ink production, adhesives and food processing.

Experiment 10

Industrial Visit: Visit to any Food Processing Industry/Plant having Boiler equipped with Accessories/Automobile Service station.

Description: Idea about generation of steam in a boiler and mountings and accessories of the boiler can be

accumulated with the visit to a Plant equipped with Boiler. The working of Internal Combustion engines,

method of cooling system employed, lubrication and various parts of an engine and their working can be

understood with the visit to any service station.

Industrial Visit Report:

Assignment: Submit a detailed case study of the visited plant, identifying types of boilers used, working conditions, accessories installed, and safety measures.

Exemplars / Practical Applications: Power plants, textile industries, food processing, chemical industries,

automobiles, aerospace.

Important Note:

- 1. Experiment no.1, 2 and 10 are compulsory.
- 2. Perform any 2 Experiments from 3 to 5 and
- 3. Perform any 3 Experiments from 6 to 9

Exemplars / Practical Applications

- 1. Power plants, textile industries, and paper mills where steam generation efficiency is critical.
- 2. Automotive engine tuning, backup generator maintenance, and industrial air compression systems.
- 3. Designing piping systems in water treatment plants, HVAC systems, and irrigation setups.

Savitribai Phule Pune University Second Year of Mechanical Engineering (2024 Pattern)				
VSE-221-MEC: Data Science &AIML				
Teaching	g Scheme	Credit	Examination Scheme	
Theory	NA		ССЕ	NA
Practical	2 Hours/Week	1	Practical	50 Marks
Prerequisite Con Linear Al	 Prerequisite Courses, if any: Linear Algebra, Probability, Statistics, Logical Reasoning 			
 Course Objectives: 1. To INTRODUCE students to supervised, unsupervised, and reinforcement learning techniques. 2. To GUIDE students in acquiring, visualizing, and analyzing real-world datasets. 3. To ENABLE students to perform feature extraction, selection, and dimensionality reduction. 4. To FACILITATE the development and evaluation of classification and regression models. 5. To EXPOSE students to practical applications of Markov processes, RL, GA, and NN in 				
Course Outcomes: After successful completion of the course, learner will be able to: CO1. UNDERSTAND different machine learning paradigms and their use cases. CO2. ANALYZE and VISUALIZE datasets for machine learning applications. CO3. APPLY feature engineering techniques including PCA and selection methods. CO4. DEVELOP and EVALUATE classification and regression models. CO5. IMPLEMENT Markov models, RL, GA, or NN for solving real-world problems				
Guidelines for Practical's Conduction				
 Instruction to students: The student shall complete the following activity as a Practical's Students need to apply the computational algorithms using suitable software / programming language. Experiment 1, 2, 3, 6 & 7 are compulsory. Experiment 2 to 7 to be taken on same data set. 				
	List of Experiments			
Experiment 01				
 To study supervised/unsupervised/reinforcement learning approach. 1. Group customers by shopping behavior 2. Classify emails as spam or not spam Practical Applications 1. Email Filtering 2. Autonomous Driving 				
Experiment 02				
 To acquire, visualize and analyze the data set (from time-domain/frequency-domain/ etc.) Comparison of engine vibration frequencies Analyze motion sensor (accelerometer) data from a smartphone Practical Applications Vibration Monitoring in Engines Voice Paccemition 				
Experiment 03				
To extract featur	res from given dat	a set and est	ablish training data.	

1. Extract color histograms from images

2. Extract word counts from news articles
Practical Applications
1. Face Recognition Systems
2. Speech-to-Text Systems
Experiment 04
To select relevant features using suitable technique
1. Sales prediction
2. Use Recursive Feature Elimination (RFE) with Logistic Regression
Practical Applications
1. Medical Diagnosis
2. Stock Price Prediction
OR
Experiment 05
To use PCA for dimensionality reduction
1. Apply PCA on air pollution data
2. Use PCA on climate data to analyze trends
Practical Applications
1. Fault Detection in Manufacturing
2. Handwriting Recognition
Experiment 06
To classify features/ To develop classification model and evaluate its performance (any one
classifier).
1. Classify different bank customers
2. Classify flower species
Practical Applications
1. Credit Scoring
2. Image-based Quality Inspection
Experiment 07
To develop regression model and evaluate its performance (any one algorithm).
1. Predict nouse price 2. Predict student marks based on tests
Practical Applications
1 House Price Prediction
2. Energy Demand Forecasting
Experiment 08
Markov process for modelling manufacturing processes.
1. Inventory Simulation
2. Machine Maintenance
Practical Applications
1. Predictive Maintenance
2. Customer Behavior Modeling
OR
Experiment 09
Reinforced Learning for optimizing engineering designs / Robot Guidance and Navigation.
1. Optimize energy consumption

2. Optimize robot movement

Practical Applications

- 1. Warehouse Robotics
- 2. Optimize air conditioning systems

Experiment 10

GA for optimization of multi-dimensional function / path planning in robotics

- 1. Use GA to plan shortest path
- 2. Function Optimization

Exemplars / Practical Applications

- 1. Logistics & Route Optimization
- 2. Antenna Design Optimization

OR

Experiment 11

NN for parameter and model identification / tuning of Control Algorithms.

- 1. Predict student grades
- 2. Use NN for tuning or control

Practical Applications

- 1. Autonomous Vehicle Control
- 2. Industrial Process Modeling

Learning Resources

Text Books:

- 1. Deisenroth, Faisal, Ong, Mathematics for Machine Learning, Cambridge University Press, 2020.
- 2. B Joshi, Machine Learning and Artificial Intelligence, Springer, 2020.
- 3. Parag Kulkarni and Prachi Joshi, "Artificial Intelligence Building Intelligent Systems", PHI learning Pvt. Ltd., ISBN 978-81-203-5046-5, 2015
- 4. Stuart Russell and Peter Norvig (1995), "Artificial Intelligence: A Modern Approach," Third edition, Pearson, 2003.

Reference Books:

- 1. Solanki, Kumar, Nayyar, Emerging Trends and Applications of Machine Learning, IGI Global, 2018.
- 2. Mohri, Rostamizdeh, Talwalkar, Foundations of Machine Learning, MIT Press, 2018.
- 3. Kumar, Zindani, Davim, Artificial Intelligence in Mechanical and Industrial Engineering, CRC Press, 2021.
- 4. Zsolt Nagy Artificial Intelligence and Machine Learning Fundamentals-Apress (2018)
- 5. Artificial Intelligence by Elaine Rich, Kevin Knight and Nair, TMH

Task Force for Curriculum Design and Development

Advisors & the Chairmen - Board of Studies

Dr. P. A. Patil	Dr. Kushare Prashant
Dr. Ravindra Navthar	Dr. Girish Modak
Dr. Amar Pandhare	Dr. Shiv Sai Dixit
Dr. Vishnu Wakchaure	Dr. Niranjan Kolhe
Dr. S. B. Zope	Dr. Ajit Bhosale
Dr. J. A. Hole	Dr. Narendra Deore
Dr. Mohan Khond	Dr. V. N. Chougule
Dr. A. B. Gawand	

Team Members for Course Design Prof Vishalsingh D Raiput

Dr. Kanif M. Markad	Prof. Vishalsingh D. Rajput
Dr. Vaibhav Vilas Edake	Prof. Vilas M. Mhaske
Dr. Somnath G. Kolgiri	Prof. Pawar Deepak Sadashiv
Dr. Jagannath Gawande	Prof. Dhammadip A. Kamble
Dr. S. A. Ansari	Prof. Vivek P. Patekar
Dr. Kuldeep A. Mahajan	Prof. R. R. Mali
Dr. Jahier Abbas Shaaikh	Prof. G. T. Sawant
Dr. Kaveri A. Katake	Prof. Vaibhav Bansode
Dr. Rahul R. Chakule	Prof. Pradip Karale
Dr. Mangesh D. Shende	Prof. G. P. Lohar
Dr. P. A. Narwade	Prof. A. G. Habib
Dr. Pradnya Kosbe	Prof. Rajkumar Panchal
Dr. Ajeet Kumar	Prof. Kalhapure Rajendra E.
Dr. Dileep More	Prof. Yogesh Suresh Khairnar
Dr. N. S. Mujumdar	Prof. Sagar Suresh Dol
Dr. Dipak S. Bajaj	Prof. Chetanraj Patil
Dr. Madhavi M Rane	Prof. Karamkar Bhushan Pandurang
Dr Amol Bhausaheb Patil	Prof. Sonali Mandar Narsale
Dr. Nitin N Gotkhindikar	Prof. Anantharama Baipadithaya
Dr. Dattatraya Popat Kshirsagar	Prof. Babasaheb K Varpe
Dr. S V Chaitanya	Prof. Chandrakant Kisan Bhosale
Dr Anjali Joshi	Prof Ravindra Dispute

Dr Ajit Dharma	Prof. Rajesh Gorde
Dr Prashant Nehe	Prof. Pratik Akarte
Prof. Mahesh C. Shinde	Prof. Purva Kadam
Prof. K. M. Garse	Prof. Jeevankumar Sodal
Prof. Srikanth karankoti	Prof. Amruta Rananaware
Prof. Ravikant K. Nanwatkar	Prof. S. A. Phule
Prof. Kishor Dagale	Prof. Priyanka Barde
Prof. Gayatri S. Patil	Prof. V. D. Kolate
Prof. Atul N. Gowardipe	Prof. D. L. Bankar
Prof. B. T. Tagad	Prof. Gaurav Dave

Compiled By Prof. Mahesh C. Shinde

Dr. Pradeep A. Patil

Chairman– Board of Studies Mechanical Engineering Savitribai Phule Pune University, Pune
