M.Sc.-I

ZOOLOGY

ZY- 101(T): Biochemistry

(2013 Pattern) (Semester-I) (3 Credit)

Time : 2½ Hours

[Max. Marks : 38

Instructions to the candidates:

- 1) Attempt any three questions from Q.No.1 to Q.No.5.
- 2) Question No.6 is Compulsory.
- 3) Figures to the right indicate full marks.
- 4) Draw neat labeled diagrams wherever necessary

Q1) a) Classify lipids in brief. [4]

b) Give the biological significance of monosaccharides. [4]

c) What is Rickets? [2]

Q2) a) Explain the structure of water molecule. Add a note on properties of water. [5]

b) Explain source and functions of vitamin E. [3]

c) What is holoenzyme? [2]

Q3) a) Define pH? Explain the role of buffers in biological system with an example. [3]

b) Give M-M equation and derive Lineweaver-Burk equation. [3]

c) What are structural polysaccharides? Explain their structure and function with examples. [4]

Q4) a) Explain competitive and Non Competitive enzyme inhibition. [4]

b) Explain coenzymes with suitable examples. [4]

c) Write Henderson-Hasselbalch equation and give its importance. [2]

P.T.O.

Q5) a) What are isozymes? Explain them with suitable example. [5]

b) Classify enzymes with suitable examples. [5]

Q6) Write short note on.(Any two): [8]

a) Draw the structure of following polypeptide.

Ser-Ala-Lys

b) Effect of temperature on enzyme activity.

c) Allosteric enzyme.

d) Biological significance of Lipids.

M.Sc-I

ZOOLOGY

ZY 102(T): Cell Biology

(2013 Pattern)(Semester-I)(3 Credits)

Time : 2½ Hours

[Max. Marks : 38

Instructions to the candidates:

- 1) Attempt any three questions from Q.No.1 to Q.No.5.
- 2) Question No.6 is Compulsory.
- 3) Neat diagrams must be drawn wherever necessary.
- 4) Figures to the right indicate full marks.

Q1) a) Describe functions of Rough Endoplasmic reticulum. [4]
b) Lysosomes are suicide bags in cell. Explain [4]
c) Explain glycocalyx [2]

Q2) a) Describe fluid mosaic model of plasma membrane [5]
b) Explain cell adhesion molecules with their significance [3]
c) What are plasmo desmata. [2]

Q3) a) Explain the mechanism of synaptic transmission. [4]
b) Give the organic compounds of cytoplasmic matrix [3]
c) Describe β oxidation of fatty acids. [3]

Q4) a) Explain the different phases of cell cycle. [5]
b) Explain Nucleo-cyto plasmic interactions. [5]

Q5) a) Explain glyoxylate cycle & give its significance. [5]
b) Describe composition & functions of microtubules [5]

P.T.O.

Q6) Write short note on.(Any two):

[8]

- a) Intermediate filaments.
- b) Sketch & label ultrastructure of nucleus
- c) Protein import in mitochondria.
- d) Genetic system of chloroplast.

[5029] - 103

M.Sc.-I

ZOOLOGY

ZY - 103T : Genetics

(2013 Pattern) (Semester - I)

Time : 2 Hours]

[Max. Marks :25

Instructions to the candidates:

- 1) Attempt any two questions from Q.No.1, 2 & 3.
- 2) Question No.4 is compulsory.
- 3) Figures to right indicate full marks.
- 4) Draw neat labeled diagrams wherever necessary.

Q1) a) Define Epistasis. Explain Epistatic gene interaction with reference to Duplicate gene epistasis. [4]

b) Explain- Structural organization of Lac operon [4]

c) Define: [2]

i) Linkage group

ii) cistron

Q2) a) Write the characteristic features of autosomal recessive inheritance [4]

b) “Quantitative traits are influenced by both, genes and environmental factors”-Explain. [3]

c) Explain-classical concept of a gene. [3]

Q3) a) Describe the technique of somatic cell hybridization. State its applications. [5]

b) The PTC tasting ability was checked in a population of 1000 individuals. 600 individuals were tasters and remaining were non-tasters. Calculate the percentage of heterozygous tasters [3]

c) State the assumptions and results of Hardy-Weinberg’s law. [2]

P.T.O.

Q4) A corn plant known to be heterozygous at three loci is test crossed. The progeny phenotypes and numbers are as follows: [5]

a	b	c	570
+	+	+	575
+	b	c	355
a	+	+	360
a	b	+	37
+	+	c	37
+	b	+	33
a	+	c	33

Determine the sequence of genes on the chromosomes and the distance between them. Construct a genetic map for the three loci

OR

Among 600 students of a college, the following ABO blood types were obtained: [5]

A:280, B: 19, AB: 13 and O: 288. Calculate the gene frequencies of genes I^A, I^B , and i

(2013 Pattern) (Semester - I)

Time : 1½ Hours]

[Max. Marks :25

Instructions to the candidates:

- 1) Attempt any two questions from Q 1, Q 2, and Q 3.
- 2) Questions 4 is compulsory.
- 3) Figures to the right indicate full marks.
- 4) Use of calculator and statistical tables is allowed.

Q1) a) Define the terms: Population, frequency, cumulative frequency, mode. [4]

b) Describe in brief the method of drawing pie diagram. [3]

c) Define the term bivariate data. Give one suitable example. [3]

Q2) a) The table below gives frequency distribution. Compute 17th Percentile. [4]

Class	Frequency
00-20	12
20-40	19
40-60	26
60-80	32
80-100	17
100-120	11

b) State the formula for quartile deviation, variance and coefficient of variation. [3]

c) Explain the concept of regression. State the equations of two regression lines. [3]

P.T.O.

- Q3)** a) What are different types of events? Give one example of each. [4]
- b) State the probability distribution of Poisson distribution. Also state its properties. [3]
- c) Define: Hypothesis, P-value, Type II error. [3]

Q4) Write short note on any one: [5]

- a) F-test for equality of two population variance.
- b) Mathematical and Classical definition of Probability.

**ZY-105: Skills in Scientific Communication and Writing
(2013 Pattern - Credit System) (Semester - I)**

Time : 1½ Hours]

[Max. Marks :25

Instructions to the candidates:

- 1) Attempt any two questions from Q 1, 2, and Q 3.
- 2) Question no 4 is compulsory.

Q1) a) Mention the common errors that occurs in written communication. [4]

b) Explain tautology, double negative and double positive. [4]

c) Importance of key words. [2]

Q2) a) What are the objectives of a project work. [4]

b) Write a note on power point slides. [3]

c) Mention any three synonyms. [3]

Q3) a) Write a letter to editor for publishing a research paper. [4]

b) What is IMRAD format. [3]

c) Mention any two acronyms. [3]

Q4) Explain how to write ‘Introduction’. [5]

OR

Write a note on different types of citations.

Instructions to the candidates:

- 1) Attempt any two questions from Q.No. 1 to Q.No. 3.
- 2) Questions no. 4 is compulsory.
- 3) Neat diagrams must be drawn wherever necessary.
- 4) Figures to the right indicate full marks.

Q1) a) Describe protective adaptations in rotifers. [4]

b) Give diagnostic features of fairy shrimps. [3]

c) Give adaptations of crocodiles. [3]

Q2) a) Describe adaptations for respiration in freshwater insects. [5]

b) Describe importance of pH in aquatic life. [3]

c) Describe oligotrophic lake. [2]

Q3) a) Explain lotic Habitat. [4]

b) Describe biological changes in river due to sewage pollution. [3]

c) Give importance of tadpole in life cycle of frog. [3]

Q4) Write short notes on (any one): [5]

- a) Thermal stratification.
- b) protective adaptations in freshwater protozoa.

Instructions to the candidates:

- 1) Attempt any three questions from Q.No.1, to Q.No. 5.
- 2) Questions No.6 is compulsory.
- 3) Figures to the right indicate full marks.
- 4) Draw neat labeled diagrams wherever necessary.

Q1) a) Explain in brief role of enzyme in the regulation of metabolic pathways. [5]

b) Write note on entropy. [3]

c) Define catabolism and anabolism. [2]

Q2) a) Draw the gluconeogenic pathway of glucose synthesis. [4]

b) Explain the role of glycogen phosphorylase in glycogen breakdown. [4]

c) Give the significance of glycolysis. [2]

Q3) a) Explain the formation of isocitrate from citrate. [3]

b) What is oxidative phosphorylation. [3]

c) Write a note on ATP Synthase. [4]

Q4) a) Explain in detail Complex IV (cytochrome oxidase) of the mitochondrial electron transfer chain. [4]

b) Explain the conversion of glutamate into carbamoyl phosphate. [3]

c) What is deamination? [3]

P.T.O.

Q5) a) Explain the role of cAMP in metabolic pathway. [5]

b) Explain ketogenesis in brief. [5]

Q6) Attempt any two of the following:

a) Explain the conversion of nucleoside monophosphate to nucleoside triphosphate. [4]

b) Explain the oxidation of odd chain fatty acids. [4]

c) How is uric acid formed from GMP. [4]

- 2) Questions No.6 is compulsory.
- 3) Figures to right indicate full marks.
- 4) Draw neat labeled diagrams wherever necessary.

Q1) a) Write a note on Watson and Crick model of DNA. [5]

b) Explain the nucleotide excision repair. [3]

c) What is Satellite DNA? [2]

Q2) a) What are the nucleosomes? Explain their role in chromatin organization. [4]

b) What is Genetic code? Explain the phenomenon of degeneracy of genetic code. [4]

c) What is central dogma of molecular biology? [2]

Q3) a) What are non-replicative transposons? [3]

b) Explain the structure of nucleotide. [3]

c) Write a note on activation of amino acids during translation. [4]

Q4) a) Explain the termination of transcription in bacteria. [4]

b) Explain any two types of DNA Damage. [4]

c) Define linkage number. [2]

P.T.O.

Q5) a) Write a note on processing of m RNA at 3' end. [5]

b) Explain the promoters of eukaryotic polymerase. [5]

Q6) Write notes on any two of the following:

a) Elongation process of translation. [4]

b) Temperature melting. [4]

c) Termination of transcription in bacteria. [4]

d) Photoreactivation. [4]

Instructions to the candidates:

- 1) *Attempt any five questions.*
- 2) *Figures to the right indicate full marks.*
- 3) *Draw neat labeled diagrams wherever necessary.*

Q1) a) Explain the mechanism of water & electrolyte balance in marine air breathing vertebrates. [4]

b) Describe in detail the role of malpighian tubules in insects. [4]

c) Define: Buoyancy. [2]

Q2) a) Describe various strategies employed for reduction in density so as to achieve neutral buoyancy. [5]

b) Explain the structure and composition of plasma membrane. Add a note on facilitated diffusion. [5]

Q3) a) What is bioluminescence? Add a note on phyletic distribution of bioluminescence. [4]

b) Explain various regulatory mechanisms to achieve homeostasis. [4]

c) Enlist any two miscellaneous and products of nitrogen metabolism. [2]

Q4) a) Discuss the problems of deep sea diving. [5]

b) What is ureotelism? Add a note on: Urea cycle. [5]

P.T.O.

- Q5)** a) What is animal electricity? Explain the structure of electric organ. [4]
- b) What is action potential? Add a note on role of various ion channels in generation of action potential. [4]
- c) Define: Acclimatisation. [2]
- Q6)** a) What is an aerobic metabolism? Add a note on significance of lactic acid synthesis. [4]
- b) Define internal environment. Add a note on extracellular and intracellular environment. [4]
- c) Define: Conductance. [2]
- Q7)** a) Explain organs used by various organisms for excretion. Add a note on mechanism of urine formation by vertebrate kidney. [5]
- b) Explain the energy cost of running and swimming. [5]
- Q8)** a) Write a note on acclimation to low O₂ level. [4]
- b) Explain the atmosphere and aquatic environment with reference to their physiological implications. [4]
- c) Define: Euryhaline. [2]

M.Sc.-II
ZOOLOGY
ZY-301 (T):Genetics - I
(2013 Pattern) (Semester - III)**

Time : 3 Hours]

[Max. Marks :50

Instructions to the candidates:

- 1) Attempt any five questions.
- 2) Figures to right indicate full marks.
- 3) Draw neat labeled diagrams wherever necessary.

Q1) a) Derive an equation for change in allelic frequency caused by migration. [5]

b) Explain the terms: [3]

- i) Pseudogenes,
- ii) Cladogenesis
- iii) Synonymous substitution.

c) Explain the advantages of Heterozygote superiority over the homozygotes with a suitable example. [2]

Q2) a) How do 'r' strategies differ from 'k' strategies. [4]

b) The narrow sense heritability of wool length in a breed of sheep is 0.92, and the narrow sense heritability of body size is 0.87. The genetic correlation between wool length and body size is - 0.84. If a breeder selects for sheep with longer wool, what will be the most likely effects on wool length and body size? [4]

c) Inbreeding leads to homozygosity- Explain. [2]

Q3) a) Describe In vivo gene therapy with suitable example. [4]

b) Write a note on flow cytometry. [3]

c) The narrow sense heritability for abdominal bristle number is 12. A male with 10 bristles is mated to a female with 20 bristle number. What is the expected number of the bristles among these progeny? [3]

- Q4)** a) Explain directional and stabilizing selection modes and their effects with suitable example. [4]
- b) The mean value of a trait is 100 units and the narrow sense heritability is 0.4. A male and a female measuring 124 and 126 units, respectively, mate and produce a large number of offspring, which are reared in an average environment. What is the expected value of the trait among these offspring? [4]
- c) Enlist any four fluorescent dyes along with their excitation range used in genetic analysis. [2]
- Q5)** a) Why might Mitochondrial DNA sequences accumulate substitutions at a faster rate than nuclear gene in the same organism? [4]
- b) Calculate the effective population size (N_e) for a breeding population of 02 adult males and 98 adult females. [2]
- c) What is speciation? How do sympatric speciation differ from allopatric mode of speciation. [4]
- Q6)** a) Explain in brief: Molecular Markers. [5]
- b) Explain how a phylogenetic relationship can be determined using nucleic acid sequencing. [5]
- Q7)** a) What are model organisms? Explain the life cycle of *E.coli*. State various reasons why it is used as a model organism in genetics studies. [5]
- b) How do geneticists use parsimony method of determining phylogenetic distances? [5]
- Q8)** a) Explain the role of Mu temperate bacteriophage in genetics studies. [5]
- b) ‘Genetic polymorphism allows many populations to confront new environmental challenges’- Justify. [5]

ZOOLOGY

ZY-303(T) : Genetic toxicology

(2013 Pattern) (Semester - III) (2 Credits)

Time : 1½ Hours]

[Max. Marks : 25

Instructions to the candidates:

- 1) Attempt any two questions from Q.No.1,2 & 3.
- 2) Question No.4 is Compulsory.
- 3) Figures to the right indicate full marks.
- 4) Draw neat labelled diagrams wherever necessary.

- Q1)** a) What is Toxicology? Explain the significance of genetic toxicology. [4]
b) Explain the biological significance of mutagens. [3]
c) Explain the process of inversion in chromosome. [3]

- Q2)** a) Explain the Ames test and give its significance in genetic toxicology.[5]
b) Why is *Drosophila* used in mutation studies [3]
c) What is congenital malformation [2]

- Q3)** a) Explain in brief the numerical changes in chromosome [3]
b) Write a note on micronucleus test. [3]
c) What are base analogs? Explain the mechanism by which they cause mutation. [4]

- Q4)** Write note on any one of the following
a) Molecular methodologies used to detect mutation [5]
b) Carcinogenecity [5]

- 1) Attempt any five questions.**
- 2) Marks are shown on right hand margin.**
- 3) Draw neat diagrams wherever necessary.**

Q1) a) Explain different types of mutations in LDL receptor gene that lead to familial hypercholesterolemia. [4]

- b) Explain the following terms. [4]
- i) Genome imprinting
 - ii) Uniparental Disomy
- c) Define “Induced mutation”. [2]

Q2) a) What are disorders of carbohydrate metabolism? Explain with one suitable example. [4]

- b) Explain briefly physical mapping [3]
- c) Explain Regeneration of TCR diversity. [3]

Q3) a) Explain briefly about invasive and non-invasive method of prenatal diagnosis. [4]

- b) Differentiate between oncogenes and tumour suppressor genes. [4]
- c) Define sex limited traits and sex linked inheritance [2]

Q4) a) Explain how dosage compensation occurs in humans. [5]

- b) Write a note on DNA sequence mapping. [3]
- c) Define cell hybrids [2]

Q5) a) Explain briefly how genetics and environment influences learning and memory formation. [5]

b) Explain following briefly [3]

i) chimerism

ii) Spontaneous mutations

c) Explain any one genetic experiment for investigating animal behavior. [2]

Q6) a) Write a note on twin and adoption studies [5]

b) Explain regulation of gap genes and pair rule genes. [5]

Q7) a) Explain the genetics of human behavioural defect in schizophrenia [5]

b) Explain the following [5]

i) Tay-Sachs syndrome

ii) Fragile X syndrome

Q8) a) Describe the characteristics of autosomal recessive inheritance. [5]

b) Explain molecular basis of Sickle cell anemia [5]
